A general utility set; takes care of most nuts on Ford and other cars; a compact, powerful tool that will fit into the hard-to-get-at spot with a minimum of trouble; the strong hexagon handle takes all six sockets and gives great leverage.

Sockets are turned on screw machine from high-carbon steel and are so tapered inside that nuts seat easily but won't bind; they are case hardened and will give long service under the hardest conditions. Each set in a neat, convenient, leather-like case with snap fasteners.

Set No. B. Includes 6 socket sizes: 7/16, ½, 9/16, ⅝, 11/16 and ¾ inch. Wt. set, 1½ lbs.....Set **$1 00**

SOCKET WRENCH SETS.
BETHLEHEM.
QUICKWAY.

A small, neat, extremely efficient wrench set for special work on carburetors, magnetos, generators, etc. Just the thing for mechanics, electricians, repairmen and auto owners. Contains seven sockets and a detachable T-handle with ball check in the end. Socket sizes: 9/32 in.; 5/16 in.; 11/32 in.; ⅜ in.; 7/16 in.; 15/32 in. and ½ in. Nicely packed in individual box.

Set No. A. Wt., ½ lb.....Set **$1 50**

A larger set (with handle like Set B) covering a wider range of sizes; packed in individual box ready for immediate shipment. Eight sockets; 7/16 in.; ½ in.; 9/16 in.; ⅝ in.; 11/16 in.; ¾ in; ⅞ in. and 15/16 in.

Set No. C. Wt., 1½ lbs.....Set **$1 50**

Complete with ratchet handle, regular handle and extension bar. A wonderfully fast-selling set for the car owner for private work. Eight sockets: 7/16 in.; ½ in.; 9/16 in.; ⅝ in; 11/16 in.; ¾ in.; ⅞ in. and 1 5/16 in. Packed in individual box.

Set No. C Special. Wt., 2 lbs.Set **$2 75**

BROAD CROSS CUT SAWS

Handles must be ordered separate from saws.

—BLUE GRASS—

Blue Grass Cross Cut Saws are made of the same extra quality materials and the same infinite care characterizes their production as with other Blue Grass tools.

The needs of the lumbermen and the peculiarties of the different timbers have been carefully studied in order to make the Blue Grass Cross Cut saw a tool that in real use would respond readily and constantly to the demands of the user under any and all conditions.

All Blue Grass Cross Cut saws are ground an even gauge throughout the entire tooth edge, and then tapered to a extra thin back, which insures quick cutting and ease of operation, with just the right flexibility and stiffness to prevent buckling.

Each saw is beautifully polished and etched—altogether a tool in a class by itself unequaled in appearance—unapproachable in performance, and covered from tip to tip with our guarantee.

Extra quality crucible spring steel, evenly tempered, polished and etched. Ground gradually thinner from teeth to back, filed and set ready for use.

—BLUE GRASS—

Canadian, Lance Tooth, Perforated, 14 gauge at tooth edge, 19 gauge at center of back, extra thin back.

Nos.	6-5½	6-6	6-6½

No. 7CB—2⅝ in. plain malleable iron clasp, malleable bolt and thumb nut; same as used on No. 7 handle; set consists of bolt and clasp for one handle $0 36

STANLEY PLANES

ALUMINUM BENCH PLANES

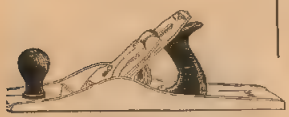
Regular Bailey type of Bench Planes, same features as regards the frogs and cutters.

Bottoms and frogs made of Aluminum instead of grey iron which provides light tool, that will not rust.

Rosewood Handles and Knobs. Nickel Plated Cap.

No. 4A—Smooth, 9 in. long, 2 in. cutters, w't 2¼ lbs.....each $8.40
ONE IN A BOX

No. 5A—Jack, 14 in. long, 2 in. cutter, w't 3 lbs.....each $9.55
ONE IN A BOX



No. 6A—Fore, 18 in. long, 2⅜ in. cutter, w't 4½ lbs.....each $12.70
ONE IN A BOX

ALUMINUM BLOCK PLANES

No. 18A—Length 6 in., 1⅝ in. cutter, bottom and adjustable front made of aluminum, this makes it extremely light in weight and will not rust, knuckle joint and steel lever cap, nickel plated, w't each ⅝ lbs., each $5.05
ONE IN A BOX

STANLEY STEEL PLANES

Body is made from one piece steel which is reinforced to give added strength. Has the Bailey patent frog and latest improvements.

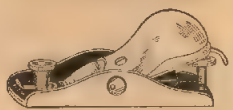
This construction makes the Plane almost unbreakable, yet leaving it light in weight.

English steel cutters, tempered and honed. Rosewood handles. Malleable frog and cap.

No. 4ST—Smooth, 9 in. long, 2 in. cutters, w't 3 lbs.....each $7.00

No. 5ST—Jack, 14 in long, 2 in. cutters, w't 4 lbs.. ..each $8.00
ONE IN A BOX

STEEL BLOCK PLANES



Plane is similar in construction to regular No. 18 Block Plane except bottom and adjustable front are made of steel instead of grey iron, making it practically indestructible.

Knuckle joint steel lever cap, nickel plated.

No. 18S—Length 6 in., cutter 1⅝ in., w't each 1¼ lbs.....each $5.05
ONE IN A BOX

OUR VERY BEST

Our Very Best

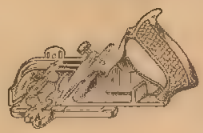
The Very Best

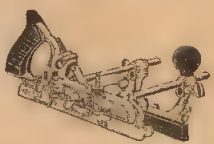
ALUMINUM DUPLEX RABBET & FILLISTER



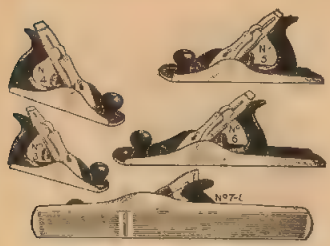
This Plane has two seats for the cutter, one for regular and the other for bull-nose work. It has a spur and a removable depth gauge. The adjustable fence can be used on either side and slides under the bottom. To work as a rabbet plane remove fence and arms. Cutter has an improved lever adjustment endwise. The aluminum fence and body make it light in weight.

No. 78A—8¾ in. long, 1¼ in. cutter, w't each 1½ lbs.....each $6.00

ALUMINUM COMBINATION PLANE



No. 45A—Similar in design to the regular Stanley No. 45 Plane. Being made of aluminum it is exceptionally light in weight and will not rust. Handle and knob are rosewood. Complete with 23 cutters consisting of 1¼ in. Sash Tool, ¼ and 5/16 in. Match Tool, one Slitting Tool, 1¼ in. Fillester. ⅛, 3/16, ¼, 5/16, ⅜, ½, ⅝, ¾, 13/16 and ⅞ in. Plow and Dado Tools. ⅛, 3/16, ¼, 5/16, ⅜, 7/16 and ½ in. Beading Tools. Each plane has an adjustable fence and depth gauge, spurs for use across the grain and can be used right or left hand. W't each 7¾ lbs.....each $27.10
ONE IN A BOX



PLANES

"BAILEY" ADJUSTABLE IRON

The handle and knob are made of highly finished, thoroughly seasoned rosewood. The English steel cutter is tempered, ground and honed, ready for use, is adjustable both endwise and sidewise, and bedded to the heel of bevel. The width of mouth can be varied by changing the setting of the frog. Bottoms, either flat or corrugated—see cut 7C—as desired.

STANLEY "BED ROCK"

For fine work on hard and knotty wood, this plane surpasses all others.

The cutter, frog and bottom are so machined and fitted that they are practically one solid piece of metal, thus preventing any chance of vibration.

The frog travels in a groove, ensuring it being square with the mouth of the plane, and preventing shifting or "wobbling."

The width of the mouth can be regulated by use of a screw driver as shown in the cut, without removing the cutter and lever.

The cutters are made of the best English steel and are adjustable both endwise and sidewise.

The shape of the sides, a distinctive feature, adds greatly to the strength of the plane.

The handles and knobs are of rosewood and finely finished.

Bottoms either flat or corrugated (see No. 606C) as desired.

ONE IN A BOX

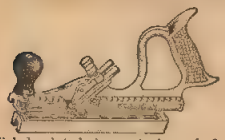
STANLEY ADJUSTABLE PLANES

TONGUING AND GROOVING



Nickel plated iron stock and face, including tonguing and grooving tools.

The fence is set in a center pivot and can be swung around and locked either way. Set one way it exposes two cutters for cutting the tongue and when reversed leaves only one exposed for making the groove.

No. 48—8¾ in., for ⅜ to 1¼ in. boards, w't 3 lbs. ..... each $7.55

No. 49—8 in., for ¼ to ⅜ in. boards, w't 2¼ lbs. ..... each $7.55

ONE IN A BOX

DOUBLE END MATCH

Nickel Plated.

Provided with both tongue and groove irons. With one side a tongue can be cut, and by reversing ends, the plane will cut a groove to fit.

No. 146—Matches ⅝ in. boards, cuts groove ⅛ in., w't 1¼ lbs., each $5.65

No. 147—Matches ⅝ in. boards, cuts groove 3/16 in., w't 2 lbs., each $6.05

No. 148—Matches ¾ in. boards, cuts groove ¼ in., w't 2¾ lbs., each $6 40

ONE IN A BOX

RABBET AND FILLISTER

The sides and bottom being square with each other, the planes will lie perfectly flat on either side. Adjustable fence slides under bottom to regulate width of cut. Has one spur on each side and adjustable depth gauge. Is suitable for either right or left hand work. The rear part of plane can be easily detached thus providing a bull nose plane.

No. 278—Japanned iron stock and fence, 6¾ in. long, 1 in. cutter, w't 2 lbs. ..... each $4.55

ONE IN A BOX

IMPROVED RABBET

Iron stock, length 8 in., with depth gauge.

WITH SPUR

Lies perfectly flat on either side, used with right or left hand equally well, while planing into corners or up against perpendicular surfaces.

Nos.	190	191	192
Cutter, in.	1¼	1¼	1
W't, lbs.	2¾	2¼	2
Each	$4.20	3.95	3.65

DUPLEX RABBET AND FILLISTER

Two seats for the cutter, one for regular work and the other where a bull nose is required. Spur and removable depth gauge. Adjustable fence can be used on either side and slides under the bottom regulating width of cut. To use as rabbet plane, remove fence and arms.

No. 78—8¾ in. iron stock and fence. 1¼ in. cutter, w't 3 lbs. . each $4.65

SKEW CUTTER, FILLISTER AND RABBET

The fence and depth gauge can be attached to either side so that the plane can be used equally well for right or left hand work. The adjustable fence slides under the bottom, regulating the width of the cut. By removing arms and fence a skew cutter rabbet plane is obtained.

No. 289—8¾ in., japanned, 1¾ in. cutter with fence and depth gauge and two adjustable spurs, one on each side, w't 4 lbs. ..... each $5.45

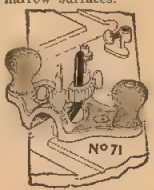
ROUTER PLANE

No. 271—Length 3 in., ¼ in. cutter. Can be set on either side of the base and used as open or closed throat, enabling user to trim out grooves or depressed surfaces used for bull nose work by having cutter on closed side of plane, w't ¼ lb. ..... each $1.00

ALL ABOVE ONE IN A BOX

WOODWORKERS' ROUTER

For surfacing the bottom of grooves and depressions parallel with the general surface of the work. The open throat design gives more freedom for chips and a better view of the work and cutter. The latter has an attachment for regulating the thickness of the chip and a second attachment for closing the throat for use on narrow surfaces.



Open Throat.

No. 71—Nickel plated, width 7⅛ in., ¼ and ½ in. steel bits, with throat attachment, w't 2¾ lbs., each $5.80

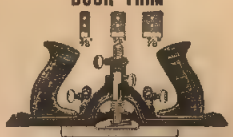
ONE IN A BOX

Closed Throat.

No. 71½—Nickel plated, width 7⅛ in., ¼ and ½ in. steel bits, w't 2¾ lbs., each $4.55

ONE IN A BOX

DOOR TRIM



This new plane will make mortises for Butts, Face Plates, Strike Plates, Escutcheons, etc., without the use of a butt gauge or chisel. Cutter can be set to work from either end of the plane or across it. Spring prevents taking a heavier chip than can be easily carried.

No. 171—11 in., japanned, nickel plated trimmings, rosewood handles, 3 forged steel cutters, w't 3 lbs., each $8.35

ONE IN A BOX

STANLEY PLANES, BEADERS, ETC.

CARRIAGE MAKERS' RABBET PLANES

Adapted for mining, wagon making and other heavy work.

Flat Bottom.

Nos.	10½	10
Length, in.	9	13
Cutter, in.	2¼	2¼
W't, lbs.	3	4½
Each	$7.55	9.10

ONE IN A BOX

SIDE RABBET PLANES

Convenient tools for side-rabbeting and trimming dados, mouldings and grooves of all sorts. A reversible nose piece will give each tool a form by which it will work close up into corners.

No. 98—4 in., nickel plated, right hand, w't 8 oz. ..... each $3.10

ONE IN A BOX

No. 99—4 in., nickel plated, left hand, w't 8 oz. ..... each $3.10

ONE IN A BOX

SIDE RABBIT PLANE

No. 79—Length 5¾ in., ¾ in., cutter, nickel plated, right or left hand. A convenient tool for light work in trimming dados, mouldings and grooves of all sorts. W't each ¾ lb., each $3.55

ONE IN A BOX

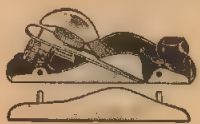
UNIVERSAL HAND BEADERS

Very handy for beading, reeding or fluting straight or irregular surfaces and for light routering. The handles are curved to give ample room between the user's hands and the surface of the work.

No. 66—Width 11¼ in., nickel plated stock, 7 steel cutters and 1 blank with 2 gauges for straight or curved work, w't 1¼ lbs, each $2.65

ONE IN A BOX

RABBET AND BLOCK PLANES



The detachable side will easily change this tool from block plane to a rabbet plane and vica versa. The cutter is adjustable end-wise and is set on askew.

No. 140—7 in., with detachable side, 1¾ in. cutter, w't 1¾ lbs., each $4.20

ONE IN A BOX

IMPROVED DADO

8 Inch, Iron Stock, with Depth Gauge and Two Adjustable Spurs.

Holds true in narrow widths where a wood plane will not. Has a skew cutter and adjustable depth gauge and spurs on each side of plane, thus allowing wear to be taken up and depth of the cut regulated.

No. 39—In.	¼	⅜	½
Each	$4.10	4.40	4.65
No. 39—In.	⅝	¾	⅞
Each	$4.90	5.10	5.35

ONE IN A BOX

STANLEY CORNER ROUNDING PLANES

Designed for rounding corners on Battens, Casings, Shelving, etc.

The cutters are sharpened ready for use. Length 7⅛ in., japanned finish, w't 1¾ lbs.

No. 144—In.	¼	⅜	½
Cuts circle, in.	¼	⅜	½
Each	$2.30	2.30	2.30

ONE IN A BOX

CABINET MAKERS' RABBET PLANES

For fine cabinet or other work where extreme accuracy is required. The sides and bottom, being square with each other, the plane will lie perfectly flat on either side and can be worked either right or left hand. They have adjustable throats; this means that the width of the throat opening, or mouth, can be widened or narrowed as coarse or fine work may require. They are also fitted with the side groove or "Handy" grip feature. The cutters are adjustable end-wise.

Nickel Plated, with Adjustable Throat.

No. 90—4 in., bull nose, adjustable, 1 in. cutter, w't 1 lb. ... each $5.65

Nickel Plated, with Adjustable Throat.

Nos.	92	93	94
Length, in.	5½	6½	7½
Cutter, in.	¾	1	1¼
W't, lbs.	1½	1¾	2
Each	$5 65	6.80	7.90

ONE IN A BOX

HORN SCRUB

This plane is imported from Germany where it is extensively used. It has a round nose iron and is especially useful for rough planing.

No. 500—9 in., 1¾ in. single iron, with horn, white hardwood nicely finished, w't 1¾ lbs., each $3.10

ONE IN A PACKAGE

Extra iron for No. 500, each $1.10

HORN SMOOTH

No. 400—8¼ in., 2 in. double iron, with horn, white hardwood nicely finished, w't 2½ lbs. ..... each $4.65

ONE IN A PACKAGE

WOOD PLANES

BARTLETT'S BENCH

All Bartlett planes are fitted with superior irons, manufactured from best cast steel and fully warranted.

Smooth.

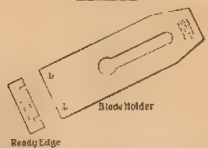
STANLEY READY EDGE PLANE BLADES



These blades assure a sharp cutting edge. Whenever an old blade becomes dull, a new one can be quickly substituted.

These blades are furnished with double Plane Irons in 1¾, 2 and 2⅜ in. sizes for use in the regular Bailey, Bed Rock and Aluminum Planes.

The blades are attached by screws to specially constructed blade holders. A plane iron cap of special design fits over this and is held in place by a cap screw. This assembled it can be applied for use in the regular planes.

Set consists of double plane iron holder and 5 cutting blades.

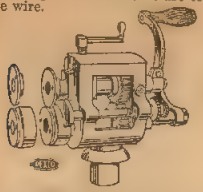
MAIL ORDER DEPARTMENT

Our constant attention in seventy-two years of business has been given to the perfection of the system of handling mail orders. Our object has always been to handle them with the greatest possible speed, with the result that we are enabled, in most cases, to ship mail orders the same day they are received.

PEXTO TINNERS' MACHINES

TURNING

Turning machines are used for turning the tops of vessels that are to receive wire.

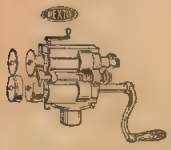


Without Stand.

COLUMBIAN. Solid frame. Furnished with extra pair of thick turning rolls. For 22 iron and lighter.

No. D541—Small. Diam. of rolls 2⅝ in. For wire size 11 to 7, w't 25 lbs. .....each $44.45

No. D542—Large. Diam. of rolls 3 in. For wire size 9 to 4, w't 31 lbs., each $51.10



Furnished With Stands

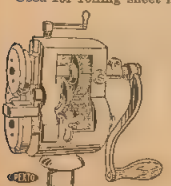
Encased pattern. Adjustable boxes. Furnished with two sets of rolls. For 24 iron and lighter.

No. F545—Small. Diam. of rolls 2⅛ in. For wire size 11 to 7, w't 28 lbs.★.....each $60.00

No. D546—Large. Diam. of rolls 3 in. For wire size 9 to 4, w't 28 lbs. .....each $66.65

WIRING

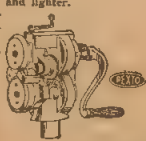
Used for rolling sheet metal tightly around wire after its seat has been prepared by turning machine.



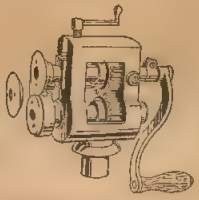
No. D525— Diam. of rolls 3 in. For No. 0 wire and smaller. W't 31 lbs., ea. $51.10

COLUMBIAN. Solid frame. For 22 ga. iron and lighter.

No. F526— Encased adjustable boxes. For 24 iron and lighter. Diam. of rolls 3 in., w't 28 lbs.★ each..$66.65



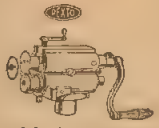
BURRING



COLUMBIAN. Solid frame. Extra upper roll. For 22 iron and lighter.

No. F576—Small. Diam. of rolls 1½ in. For turning ⅛ flanges and smaller, w't 21 lbs.★....each $37.75

No. D577—Large. Diam. of rolls 2⅜ in. For turning ¼ in. flanges and smaller, w't 25 lbs., each $42.20



Furnished With Stands

Used for creasing, edging rims of covers for pails, boilers, etc., and for preparing circular edges of bottoms and bodies of vessels for double seaming.

Encased pattern. With extra upper roll. For 22 gauge iron and lighter.

No. F579—Small. Diam. of rolls 1½ in. For turning ⅛ in. flanges and smaller, w't 21 lbs★....each $53.30

No. F580—Large. Diam. of rolls 2⅜ in. For turning ¼ in. flanges and smaller, w't 28 lbs★....each $57.75

SETTING DOWN

Setting down machines follow the burring machines, pressing the edge of bottom into the flange of body in preparation for double seaming.

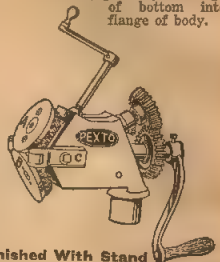
Furnished With Stands

COLUMBIAN, solid frame. For 24 iron and lighter.

No. F556—For seams up to ⅛ in., w't 23 lbs.★.....each $53.30

SETTING DOWN

Setting down machines follow the burring machines, pressing the edge of bottom into flange of body.



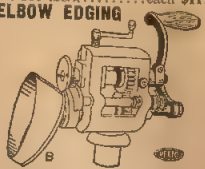
Furnished With Stand

Improved with adjustable gauge. Inclined position of both upper and lower faces allows work to be held up or down and seams to be started inward while setting down.

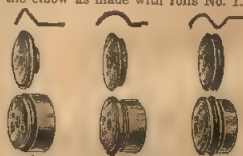
No. D561—Light. For 24 ga. iron and lighter. For seams up to ⅛ in., w't 60 lbs.....each $62.20

No. F562.—Heavy. For 18 ga. iron and lighter. For seams up to ⅛ in., w't 100 lbs.★.....each $111.10

ELBOW EDGING



Cut shows position of an elbow in turning the edge; also the form of the crease made by the machine to enter corresponding section in completing the elbow as made with rolls No. 1.



Rolls type No. 1 for V-shape edges on both elbow sections. No. 3 and 4 for elbows riveted or grooved with loose joint. Faces adapted to Columbia or Encased small turning machine. Diameter of faces 2⅜ in.

COLUMBIAN. For 24 ga. iron and lighter. Furnished with stand and one pair of rolls.

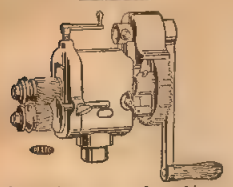
No. F551—Diam. of rolls 2⅜ in., w't each 25 lbs.★.....each $44.45

Specify type of rolls desired.

★Items Marked Thus ★ Are Shipped from Factory Only.

TINNERS' MACHINES

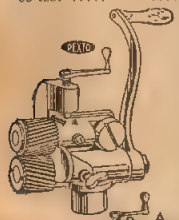
PEXTO CRIMPERS AND BEADERS



Connecting gears of machine cut steel. Rolls high grade steel, scientifically hardened. Adjustments provided for regulating depth of crimp and bead.

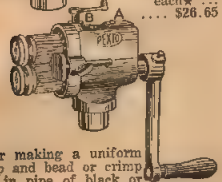
Two speeds are provided for; back geared for heavy stock and direct drive when lighter gauges of material are used.

No. H585—Cap. 20 ga. iron and lighter. Diam. beading rolls 1⅛ in., diam. crimping rolls 1⅛ in. Gear ratio 3 to 1. Furnished with crank screw for depressing rolls. W't each 65 lbs. ....each $57.75



Intended for crimping only.

No. F0589 Equipped with straight crimping rolls. For 26 gauge iron and lighter. Shipping w't 24 lbs. each★ $26.65



For making a uniform crimp and bead or crimp only in pipe of black or galvanized iron. Furnished with pair of steel blank collars making machine convertible into cornicemakers' crimper.

Width of crimping rolls 1⅜ in., width of beading rolls 1 in., diam. beading rolls 1⅛ in., diam. crimping rolls 1⅛ in., size ogee bead ⅜ in. Cap No. 24 ga. iron and lighter. W't 30 lbs.

No. F0581—Furnished with rolls for **straight crimp**★ ...each $29.45

No. D581—Furnished with rolls for **spiral crimp** .....each $29.45

CRIMPING

No. H285—Packham's for stove and conductor pipe, with standard, w't 24 lbs., each... $26.65

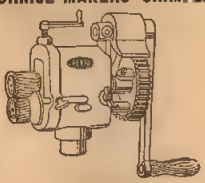
COMPANION HAND PIPE CRIMPER

Pexto

A needed companion tool for the mechanic engaged in pipe making or hanging, in the shop and outside jobs. To crimp a piece of pipe with machine-like effect and precision simply slip the end of the pipe to be crimped between the crimping rolls. Close the rolls by pushing down lever with an up-and-down movement of the handle by means of a ratchet the rolls rotate, making a perfect crimp in the pipe. The depth of crimp is regulated through a simple adjustment of a screw.

No. D788—Cap. 26 ga. iron and lighter, length overall 8 in., w't each 1½ lbs. .. ..each $8.90

CORNICE MAKERS' CRIMPER



Pexto

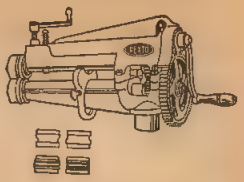
Connecting gears of machine cut steel. Rolls high grade steel, scientifically hardened. Adjustments provided for regulating depth of crimp and bead.

Designed for strength and rigidity and to produce snug fitting pipe joints that hold when put together.

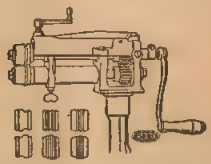
Two speeds are provided for; back geared for heavy stock and direct drive when lighter gauges of material are used.

No. F591—Cap. 20 ga., iron and lighter. Diam. crimping rolls 1⅜ in., gear ratio 3 to 1. Furnished with crank screw for depressing rolls, w't each 65 lbs.★ each $55.55

BEADING MACHINE



No. F617—For No. 20 ga. iron and lighter, 13 in. throat. Furnished with three pairs beading rolls and standard, w.t 165 lbs.★each $122.20



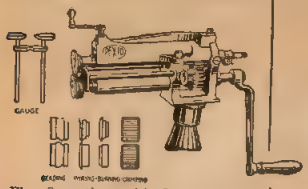
No. H620—Light Beading Machine. For No. 24 gauge iron and lighter. Depth of throat 6¼ in., diam. rolls 1⅛ in., width of rolls 1⅞ in. Furnished with four pairs of rolls; one pair each ogee ⅜ in., triple ⅜ in., single ⅛ in. and ⅛ in. Furnished with standard. W't each 50 lbs. each $62.20

STOVE PIPE CUTTER AND CRIMPER

Will cut a joint of stove pipe of any diameter in FIFTEEN SECONDS. It will CUT and CRIMP a piece of stove pipe in THIRTY SECONDS.

No. F40—Standard Style, New Model, Black with Gold Letters and Figures, Special Tool Steel Cutters, 12 in. scale cast on machine, extreme length 26 in., extreme height 15¾ in., shipping w't 60 lbs., steel crimping rolls 1¾ in. wide.★.....each $88.90

ALLINWON ROTARY MACHINE



Five Operations with One Machine

Furnished complete with standard and five pairs of rolls, viz.: crimping, beading, turning, wiring, and burring, and one extra gauge.

Width crimping rolls, 1 7/16 in.

Width beading rolls, 1 1/16 in.

Diameter turning and wiring rolls, 1⅛ in.

Capacity, using crimping or beading rolls No. 26 gauge iron and lighter.

Capacity, using turning, wiring or burring rolls No. 24 gauge iron and lighter.

No. F622—W't 60 lbs.★.each $111.10

STEEL CORNICE BRAKES

The Apron or Bending Leaf reinforced by angular shaped strengthening plate. Substantial truss rods provided for additional support and adjustment.

A Steel Angle Bar is bolted to apron to give additional leverage when bending extra heavy material.

Stop Gauges furnished free of cost.

The Clamping of material is done by means of an eccentric on each end.

When ordered with Eccentric Levers, connected brakes are so fitted without additional cost.

Set Screws provided on ends which move the upper jaw forward and back to accommodate heavy or light material and for sharp or rounding bends.

An Eccentric Bushing in lower part of connecting link allows for greater or less pressure on material.

The Angle Bar, as well as the special steel bar, is removable from the apron and narrow opposing members can then be formed. Apron edge is ⅛ in. from which ⅛ in. is detachable.

No. F4—Forming edge 8 ft. 1 in. long, for cornice and other light work as well as ⅜ in. and more, bends on No. 18 gauge, **complete with angle bar** and five formers, w't 1000 lbs.★.....each $366 65

TINNERS' MACHINES

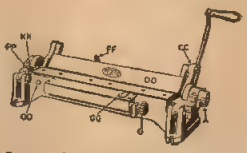
WRIGHT'S, 30 in., improved, for No. 24 iron and lighter.

This machine will turn locks of different widths on any length of sheet. May be used on material as thick as No. 24 gauge.

No. H1—Will turn locks ¼ and ⅜ in., w't 80 lbs.....each $66.65

No. F12A—Will turn locks ¼, ⅜, ½ and ⅝ in., w't 90 lbs., each★ $77.75

FOLDING MACHINE



Improved patterns represent the last word in Bar Folder Construction. Intended for forming the edges of sheet metal at various angles. Will produce closed locks as well as open or round locks for inserting a wire in the flat-sheet. Where speed and great durability are essential, especially in tinware and other light manufacturing.

Cap. ¼ in., locks on No. 22 ga. iron and lighter.

Cap. ⅛ in., locks on No. 24 ga. iron and lighter.

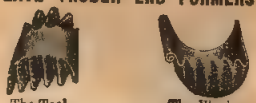
Cap. ½ in., locks on No. XX tin.

Will form closed and open locks ⅛ to 1 in. to receive a wire up to ¼ in.

No. H62—20 in., w't 140 lbs., each $122.20

No. H63—30 in., w't 220 lbs., each $144.45

EAVE TROUGH END FORMERS



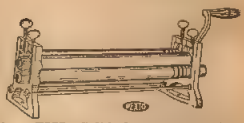
The Tool. The Work.

For closing end of eave trough in corrugations as shown in illustration.

No. D6—Bishop's, cast

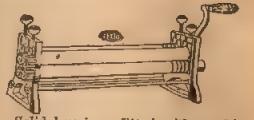
iron Trough, in....	4	4½	5
W't, lbs.	3½	4	5
Each	$1.35	1.45	1.75

FORMING MACHINES



No. F355—Solid housing cut iron gears fitted to the rolls. Length of rolls 36 in. Diam. rolls 2 in. For 22 ga iron and lighter. Grooves are cut in rolls to allow work with a wire to be formed, w't 160 lbs., each★ $57.75

COMPENSATING GEAR FORMERS



Solid housings fitted with machine cut Steel Compensating Gears. Grooves cut in rolls to allow work with a wire to be formed. For 22 gauge iron and lighter.

Nos.	F372	H373
Length rolls, in.....	36	30
Diam. rolls, in.....	2	2
W't lbs.	160	140
Each	$68.90★	57.75

INTERMEDIATE LIGHTNING SLIP ROLL FORMERS

No. H390—For lighter gauges of iron direct drive. Cap. for 16 ga. iron and lighter. Length roll 36 in. Diam. rolls 2½ in., w't 360 lbs., each $193.30

No. H381—Operations performed from one end of machine. Sturdy machine cut gears. For 22 ga. iron and lighter. Length rolls 36 in. Diam. rolls 2 in., w't 205 lbs., each $80.00

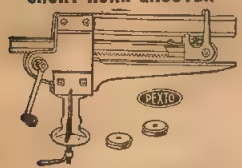
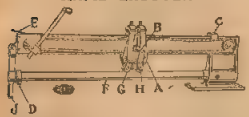
TINNERS' MACHINES, ETC.

SHORT HORN GROOVER



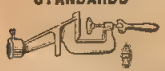
No. F502—Steel Bar and Milled Horn. For grooving seams on tin cans, pails, boilers, etc. Will groove work 20 in. in length. Size of grooving horn large end 3 in., small end 1⅛ in. Furnished with three grooving rolls ⅛, 3/16 and 5/16 in. W't 110 lbs.★ each $77.75

RAPID GROOVER



No. F518—Best for grooving the longitudinal seams in stove pipe and other sheet metal cylinders. Designed for rapid operation. Will groove work 30 in. in length. Smallest pipe that can be grooved, 2 in. Rolls are furnished, one each ⅛, 3/16, ¼ in. groovers and one flattening roll. For No. 24 ga. iron and lighter, w't 200 lbs.★..each $144.45

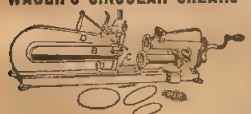
PEXTO IMPROVED MACHINE STANDARDS



No. D975—For use with **all except wiring machine,** size of hole 1⅛ in., height over all from bench 9⅛ in., w't each 10½ lbs.....each $3.90

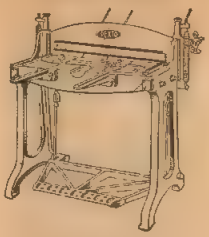
No. D976—Wiring machine, size of hole 1⅛ in., height over all from bench 9⅛ in., w't 11 lbs..each $3.90

WAUGH'S CIRCULAR SHEARS



No. F278—Fitted with quick acting eccentric lever. Will circle from square blanks 2⅜ to 22 in. For 22 gauge iron and lighter. W't 140 lbs.★.....each $122.20

SQUARING SHEARS



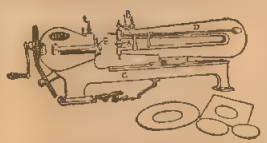
Capacity No. 18 Gauge Iron and Lighter.

Furnished with complete gauge equipment, one pair front arms. No. 137 has hold-down attachment.

No. H132—Cuts 30 in., w't 510 lbs., each $211.10

No. H137—Cuts 36 in., w't 600 lbs., each $277.75

RING AND CIRCULAR SHEARS



These improved patterns make up for a very useful and efficient Bench Ring and Circular Shears, intended for cutting circles, or internal rings and irregular curves. For No. 20 gauge iron and lighter.

No. H981—37×8 in., w't 50 lbs., each $20.55

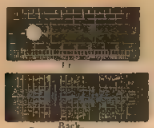
"HANDY" SEAMERS

Adjustable for seams of different widths up to ¾ in. Can be used where larger seamers would not be practical. As it is light it can be carried in tool kit or pocket.

No. D791—Japanned, length 7 in., width 3⅜ in.....per dozen $32.00

★ Items Marked Thus ★ Are Shipped From Factory Only.

RULES AND STRAIGHT EDGES



36 in. Long.

Laid off on one side with two rows of figures, the first like an ordinary steel square, by eights and inches up to three feet. The second is a line of circumferences divided into 113 equal parts; each of these divisions is again sub-divided into 8 equal parts, the large divisions representing an inch to a scale and sub-divisions an eighth of an inch. Therefore, against any diameter the circumference in this line to a scale in inches and eighths of inches can be found.

The reverse side of rule gives dimensions of measures and cans. The first two tables are for flaring measures. 1st. Liquid measures, 1 to 5 gal. 2d. Dry measures, 1 to 2 bu., giving diameter of top and bottom and height of each size and kind.

Third table is for cans with pitch or cone tops, 1 to 10 gal., giving diameter of top and body and compass marks for striking breast.

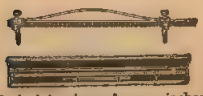
Fourth table is for flat top cans from 100 to 200 gal. (thirty-one different sizes), giving height and diameter.

Fifth table is for dry measure, from 1 qt. to 8 bu., giving height and diameter.

No. D5—Plain polished, w't ¾ lb., each $7.20

No. D95—Nickel plated, w't ¾ lb., each $8.90

MAGIC PATTERN RULES



Marked in circumference inches on the front and in inches and eighths on the back. The two slides have set screws into which trammel points are fastened. Particularly convenient for laying out elbow patterns.

No. D7—Lufkin's, nickel plated steel bar, length 4 ft. ⅞ in., square, with two slides, trammel points and flexible steel ribbon, with pattern chart mounted on linen, 19x23 in., hinged wooden case, w't 6¾ lbs., each $28.90

HALF DOZEN IN A BOX

TINNERS' TOOLS

FIRE POTS

Tank of heavy gauge seamless drawn steel, reinforced and tinned inside and out to prevent rust. Latest improved single needle burner of simple construction generating intense heat. Burner fitted on swivel. Burns low or high test gasoline. Will heat a pair of 12 lb. coppers and melt a pot of lead at the same time.

No. H91—C. and L., gasoline, cap. 1 gal., height 13 in., w't 13¼ lbs., each $22.00

Noiseless, smokeless and odorless. New improved single needle fire pot producing an intensely hot noiseless blue flame, burning perfectly either high or low test gasolines. Gas burns from both sides toward center. A sub-flame permits turning heating flame low between jobs, thus saving fuel expense. Top section is of cast iron and tank of heavy gauge drawn steel, reinforced, fitted with Patented Cushion Band at base which protects it from injury and makes tank leakproof. Metal heavily coated with tin both inside and out, thus preventing rust. Powerful pump produces air pressure quickly. Ideal Fire Pot for either indoor or outside work under severe weather conditions. A pair of coppers up to 12 lbs. can be quickly heated and a 6 in. pot of metal melted at same time. It is a favorite for Tinners' use and for all work requiring intense heat.

No. H80—C. and L., gasoline, cap. 1 gal., w't 22 lbs ... each $24.10

FIRE POTS

Coil fire pot having all latest up-to-date features. Made for plumbers' use, fitted with tinners' shield, which is of sheet steel, quickly heating a pair of large size soldering coppers. Shield is removable, thus making fire pot excellently adapted to melting metals and various other work.

No. H23—C. and L., gasoline, cap. 1 gal., w't 14 lbs.....each $20.10

No. H3—Gem, gasoline, aluminum bronze, cast iron furnace, removable top, feed regulator, needle valve, all cast brass fittings, japanned wood handle, sliding drip cup, rubber pump bulb 21x7 in. sheet steel base, 10¾x4½ in. sheet steel reservoir, w't 24 lbs.....each $29.55

No. H15—Gasoline, seamless drawn steel tank, capacity 1 gal., brass air pump, needle valve, cast hood with opening for melting pot, cast "horse shoe" burner, w't 20 lbs.each $23.75

FIRE POTS

So constructed that ashes fall into pan beneath coal; fire is kept clear and draft is good.

BUTTLES Pattern

No. H76—Charcoal sheet iron japanned, height 14 in., diam. at base 6 in., top 8 in., w't 32 lbs., each $11.65

ONE IN A BOX

RUBBER BULBS

No. D45—For gasoline fire pots, w't ¼ lbs. ....each $1.10

MELTING POTS

Fits any Make Furnace

No. D65—Size 5 in., cast iron with bail, w't each about 2¼ lbs., each $1.35

GAS FURNACES

DOUBLE BURNER, FOR NATURAL OR ARTIFICIAL GAS

Burner used gives an intense heat, makes no smoke and economizes time. Air blower not required when heating coppers.

No. H794—Sheet iron top, brick lined, arranged to receive two coppers, each $10.00

POCKET KNIVES.

REMINGTON.

Fully Warranted.

Manufactured by the Remington Cutlery Works, whose plant, in construction, arrangement, convenience and adaptability, is of the most modern type. They have designed and built equipment best adapted to the production of Pocket Cutlery to the uniform high Remington standard of quality, on a large scale.

Remington blade steel is not a matter of chance, tradition or custom. Regardless of first cost, they have sought and found for Remington blades the blade steel that will stand up under the most exacting tests and the rough hard usage for which Pocket Knives are not intended, but which they usually undergo.

Heat treatment—hardening and tempering is by their own laboratory process. Every lot of blade steel is analyzed and tested at random before its actual use in process is permitted.

"The prime function of a Pocket Knife is to cut—to cut keenly." To this end they have designed equipment and adopted methods which insure a strong keen cutting edge on every Remington knife blade.

Half dozen in a package.

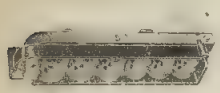
SOCKET WRENCH SETS

No. 83 MOSSBERG HAN-D-SET



An economical car owner's set with just the size sockets necessary for every day adjustments. Sockets interchangeable with all standard Mossberg handles.

No. 83 Consists of 6 sockets, one each of the following with hexagon openings: ⅜, ½, ⅝, ¾, ⅞ and 1 inches. Offset handle . . . . . Per Set, **$1.10**

Twelve Sets in a Carton

No. 24 H-L HANDLE LOCK SET

Sockets are machined from solid bar steel, carefully case hardened and tested. Handle is of bar steel case hardened, at each end is a friction ball serving to hold socket in place. Sockets may be attached to either end of handle. Container is constructed of 18 gauge steel, having hexagonal holes through the ends to receive handle. Designed to hold sockets so that the sizes may be seen at a glance.

No. 24 Consists of 8 sockets, one each of the following with hexagon openings: ⅜, ½, ⅝, ⅝, ¹¹⁄₁₆, ¾, ⅞, and 1⅛ inches. Length of handle, 8¾ inches. Size of container, 1⅜x 7½ inches.....Per Set, **$1.35**

Ten Sets in a Carton

No. 1 JAMESTOWN SET

Sockets are machined from a select grade of steel and are cyanide hardened. Ratchet handle is made of heavy sheet steel; L handle is of bar steel. Box is made of sheet steel, japanned black finish.

No. 1 Consists of 8 sockets, one each of the following with hexagon openings: ⅜, ½, ⅝, ⅝, ¹¹⁄₁₆, ¾, ⅞ and 1⅛ inches. Length of L handle, 7¾ inches; length of ratchet handle, 7¾ inches. Size of container, 1⅞x8 inches .....Per Set, **$2.00**

Ten Sets in a Carton

No. 25 HANDLE-LOCK SPECIAL SET

Sockets are machined from solid bar steel, case hardened. Handle and extensions are of bar steel, case hardened, with friction balls serving to hold sockets in place. Socket may be attached to either end of handle. Container is constructed of 18 gauge steel.

No. 25 Consists of 8 sockets, one each of the following with hexagon openings: ⅜, ½, ⅝, ¾, ⅞, 1 in., ⅛, ⅜ and 1⅛ inches. Length of handle, 8 inches; length of extensions 7½ and 11⅛ inches; length of ratchet, 7 inches; size of container, 1½x7 inches...Each, **$2.00**

Ten Sets in a Carton

No. 85 MOSSBERG OIL DRAIN PLUG SET

Square sockets fit both outside and inside plug fittings. Sliding Tee Handle may be used for Offset as well as Tee wrench.

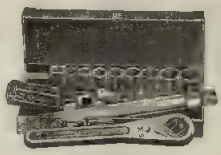
Contents:

No. 870 Sliding tee, 10 inches long. No. 372 Extension bar, 5 inches long. 15 steel sockets, sizes, hexagon: ⅜, ½, ⅝, 1, 1⅛, 1⅜, 1⅝ and 1⅞ inches. Square: ½, ⅝, ¾, ⅞, 1, 1⅛ and 1¼ inches.

No. 85 All steel construction. Packed in a brown enamel steel box. Size of box, 2⅛x 4⅛x10⅜ inches. Shipping weight, 4¼ lbs. Each, **$4.50**

One Box in a Carton

No. 30 MOSSBERG UNIVERSAL SET



Fits 84 possible adjustments on Fords.

Contents:

No. 355 Ratchet Handle, 8 inches long. No. 351 Extension, 9¾ inches long. No. 336 Universal Joint. No. 101 Offset Screw Driver, 10 sockets. Sizes, hexagon: ⅜, ⅜, ⅜, ⅜, ⅜, ⅜, ⅜, ⅜ and ⅝ inches. Square: ⅜ inches. One ⅝ inch hexagon spark plug socket. No. 407, 4 inches long.

No. 30 All steel construction. Packed in a brown enameled steel box. Size of box, 2⅛x8⅞x9⅝ inches. Shipping weight, 5¼ lbs. .....Each, **$5.75**

One Box in a Carton

No. 13 MOSSBERG INTERCHANGEABLE

Contents:

No. 355 Ratchet Handle, 8 inches long. No. 351 Extension Bar, 9⅝ inches long. 15 hexagon steel Sockets, sizes: ⅜, ⅜, ⅜, ⅜, ⅜, ⅝, ⅝, ⅝, ⅝, ¾, ⅞, 1, 1⅛ and 1¼ inches. One ⅝ inch hexagon spark plug socket, No. 402-4 inches long.

No. 13 All steel construction. Packed in a brown enamel steel box. Size of box, 2⅛x 4⅛x10⅛ inches. Shipping weight, 5¾ lbs... ..... Each, **$5.75**

One Box in a Carton

No. 84 MOSSBERG

Six of the most popular sizes of sockets with the new Mossberg 890 reversible ratchet handle

This set is designed for close work in tight places where adjustments are inaccessible to ordinary types of ratchet handles.

Contents:

No. 890 Reversible ratchet handle. 6 chromemolybdenum steel heavy duty hexagon sockets sizes ⅜, ½, ⅝, ¾, 1 and ¼ inches

No. 84 All steel construction. Packed in a brown enameled steel box. Size of box, 1¾x 2¼x10⅝ inches. Shipping weight, 3½ lbs. ..... Each, **$5.00**

One Box in a Carton

No. 80 MOSSBERG

Contents:

No. 350 Reversible Ratchet Handle. No. 373 Extension Bar, 10 inches long. No. 372 Extension Bar, 5 inches long. No. 371 Connecting Block, 10 chrome molybdenum steel heavy duty hexagon sockets, sizes: ⅜, ½, ⅝, ⅝, ¹¹⁄₁₆, ¾, ¹³⁄₁₆, ⅞ and ¹⅛ inches.

No. 80 All steel construction. Packed in a brown enameled steel box. Size of box, 1⅝x 3⅝x10⅝ inches. Shipping weight, 6 lbs... ..... Each, **$8.00**

One Box in a Carton

STANDARD WRENCHES FOR FORD CARS

MOSSBERG CYLINDER HEAD SCREW AND REAR AXLE HOUSING NUT WRENCH

Especially designed for all cylinder head cap screws (including those hard to get at under the dash) and rear axle housing bolts and nuts. Bar is of ½ inch chrome manganese steel, fitted at tee end with chrome manganese steel socket, round shape for minimum clearance. Burnished nickel finish.

½ Inch Hexagon Opening

Fits:
Coil box nuts.
Controller shaft bracket bolt nut.
Crank case lower cover screws
Dash bracket-to-dash bolt nut.
Differential drive gear screws.
Front fender apron to-frame bolt nut.
Muffler rod nut.
Rear axle housing bolts and nuts.
Rear fender iron bolt nut (runabout and coupe).
Running board-to-fender bolt and nut, front and rear
Steering tubing flange screw nut.
Tire holder bracket to-body and nut (on side).

⅝ Inch Hexagon Opening

Fits:
Commutator case support bolt.
Connecting rod cap bolt nut.
Cylinder head cap screws.
Cylinder head outlet connecting screws.
Cylinder water inlet connecting screws.
Demountable rim bolt nut.
Drive shaft roller bearing set screw.

No. 630 Length, 9¾ inch, with ½ and ⅝ inch hexagon openings; shipping weight of 12 wrenches, 8¼ lbs.....Each, **$0.73**

Twelve in a Carton

MOSSBERG MAIN BEARING NUT HOLDING WRENCH

When making adjustments of main bearing bolts, it is necessary to hold the nuts so they will not turn. No. 2149 slips in between the cylinders, grips these nuts and actually eliminates the need of another man. Bar is made of ⅝ inch chrome manganese steel. Deep dome top socket of special analysis steel, round shape for minimum clearance Burnished nickel finish.

Fits:
Brake shoe support bolt and nut.
Commutator lock nut.
Crank case front bearing and spring clip nut.
Crank shaft rear bearing bolt and nut.
Fan bracket bolt
Lamp bracket nuts
Main bearing nuts
Rear radius rod bolt and nut.
Spindle bolt nut.
Steering gear post castle nut.

No. 2149 Length, 10 inches with ¾ inch hexagon opening; shipping weight of 6 wrenches, 5 lbs.....Each, **$0.54**

Six in a Carton

MOSSBERG SPRING PERCH NUT WRENCH

Fits all spring perch nuts and particularly invaluable in shock absorber adjustment. Bar is made of ⅞ inch steel. Dome top sockets are of special analysis steel round shape for minimum clearance. Burnished nickel finish.

1⅛ Inch Hexagon Opening

Fits:
Drive shaft castle nut.
Front spring perch nut.
Rear axle shaft castle nut.

1 Inch Hexagon Opening

Fits:
Rear spring perch nut.

No. 634 Length, 10¼ inch with 1⅛ inch and 1 inch hexagon opening; shipping weight of 6 wrenches, 9 lbs.....Each, **$1.25**

Six in a Carton

MOSSBERG CYLINDER HEAD SCREW AND SPARK PLUG WRENCH

A utility wrench with great scope of work. Is an established type and is a good leader for service stations and repair shops. Especially adapted for getting at the last two cylinder heads under the dash Made of heavy special steel. Socket is of special steel alloy, properly hardened, round shape allowing minimum clearance. Burnished nickel finish.

⅝ Inch Hexagon Opening

Fits:
Cylinder iront cover cap screw (starter type)
Cylinder head cap screws.
Cylinder head outlet connecting screws.
Cylinder water inlet connecting screw.
Demountable rim bolt nut
Drive shaft roller bearing set screw.
Drive shaft roller bearing stud nut.

⅛ Inch Opening

Fits:
Spark plug.
Crank case drain coupling.
Differential housing oil plug.
Drive shaft castle nut.
Front spring perch nut.
Rear axle shaft castle nut.
Transmission band adjusting screw and nut.

No. 635 Length, 10 inches, with ⅝ inch hexagon and ⅛ inch openings. Shipping weight of 6 wrenches, 4¾ lbs....Each, **$0.85**

Six in a Carton

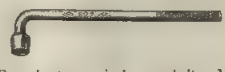
MOSSBERG RATCHET TENSION SPRING WRENCH

For use on reverse and brake pedal. Does a hard job easily. A fast moving item because it is made just for this work. Improved shape of ratchet also allows for adjustment of speed band. Made of heavy steel with properly hardened ratchet and spring Burnished nickel finish.

No. 645 Length, 6⅛ inches, with ⅛ inch octagon opening; shipping weight of 12 wrenches, 2⅞ lbs.....Each, **$0.50**

Twelve in a Carton

MOSSBERG MAIN BEARING BOLT WRENCH



For adjusting main bearing bolts. Made of one piece ⅝ inch bar, heavy forged steel, knurled handle, round shape for minimum clearance. Burnished nickel finish

⅞ Inch Square Opening

Fits:
Crank shaft bearing bolt.

No. 632 Length, 13¼ inches with ⅞ inch square opening; shipping weight of 6 wrenches, 9 lbs.....Each, **$1.10**

Six in a Carton

MOSSBERG FLY WHEEL CAP SCREW WRENCH

Is a heavy forged wrench designed to make the hardest adjustments in the fly wheel cap screws on Ford cars. Made of one solid piece of ¾ inch forged bar steel. Special heat treated to assure maximum strength. Knurled handle. Burnished nickel finish

⅞ Inch Opening

Fits:
Fly wheel cap screws.
Battery cable terminal nut on floor board.
Battery clamp bolt nut.

No. 636 Length, 11¼ inches, with ⅞ inch opening; shipping weight of 6 wrenches, 10½ lbs.....Each, **$1.25**

Six in a Carton

INTERCHANGEABLE HEAVY DUTY SOCKET ACCESSORIES

MOSSBERG RATCHET HANDLES

Made of heavy plate steel. Every part is properly balanced to give the greatest strength possible. Black japanned finish. Made especially to fit heavy duty sockets.

No. 357 Length 18½ inches. Shipping weight, 5 lbs. . . . Each, **$9.00**

One in a Carton

MOSSBERG OFFSET HANDLES

Made of ½ inch heavy steel bar. Especially made to set up large nuts and bolts with large series sockets fit. Black japanned finish

No. 324 Length, 15 inches. Shipping weight of 6 handles, 10 lbs.....Each, **$0.75**

Six in a Carton

MOSSBERG LONG EXTENSION BARS

Made of heavy steel tubing. Extension gives a vertical clearance of 18 inches when used with the ratchet handle. Black japanned finish.

No. 349 Length, 18 inches. Shipping weight of 6 bars, 17 lbs.....Each, **$2.00**

Six in a Carton

MOSSBERG SHORT EXTENSION BARS

Made of heavy steel tubing. Black japanned finish.

No. 348 Length 10 inches. Shipping weight of 6 bars, 10 lbs.....Each, **$1.45**

Six in a Carton

MOSSBERG RECONCILING UNITS

Made for adjusting extra heavy duty sockets with small series handles.

No. 344 Reconciling units.....Each, **$0.35**

Made so that small series sockets may be used with extra heavy duty handles

No. 338 Reconciling units.....Each, **$0.60**

MOSSBERG UNIVERSAL JOINTS

Made of steel. Burnished nickel finish. Fits handles, sockets, and bars. For heavy duty work

No. 337 Universal Joints . . . .Each, **$1.75**

VALVE GRINDERS

MOSSBERG

For Ford Cars

Made of bar steel with wood swivel top and grip. Burnished nickel finish. The points which engage in the two holes in the valve top are of the rocking type, giving rapid, steady turnover

No. 607 Length 4¾ inches, shipping weight of 6 grinders, 27½ oz.. . . Each, **$0.50**

Six in a Carton

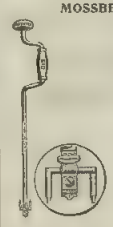
For Ford Cars

Made of ⅜ inch bar steel with top and center swivel grip handles Burnished nickel finish. Fits all valve tops except under the dash. Rocker points assure ease of operation and well ground valves.

No. 608 Length, 22½ inches; shipping weight of 6 grinders, 8½ lbs.....Each, **$0.90**

Six in a Carton

MOSSBERG UNIVERSAL

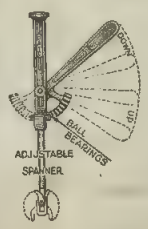


Made of ⅜ inch bar steel with top and center swivel grip handles. Burnished nickel finish. Serves all work in the grinding of valves, whether the valve tubes be slotted or holed. It is easily adjusted for either type. The length gives the operator an easy position for the repeated quarter turns, and rocker points assure constant engagement without slipping

No. 610 Length, 21 inches; shipping weight of 6 grinders, 8 lbs.....Each, **$1.25**

Six in a Carton

SIMPLICITY



For Ford Cars

Oscillating grinder with a range from ⅛ to 1¾ turns. Has natural easy, pump action. Handle leverage 5 to 1. A single gear, ball bearing direct drive grinder designed to turn the valve properly and its use cannot cause oval seats or ring cuts. Equipped to grind all valves, no loose drive plates, swivels, etc., to cause side pressure, insuring correct alignment of valves while grinding in.

No. 55 Length, 16 inches.....Each, **$3.00**

One in a Box

VALVE GRINDERS

MILLERS FALLS

Consists of steel gears and crank handle. Black enameled iron frame; Stained hardwood head shaped to give firm comfortable grip. Forward turns of the crank cause grinding head to reciprocate and make one complete revolution to ten turns of the crank. Ball Bearings insure free action and increase its power. Spanner points are adjustable and the flat blade is used for slotted valve heads.

No. 238 Length over all 13⅜ inches; length of spindle, 6¾ inches Weight, 2½ lbs.... . . . . .Each, **$3.40**

One in a Box

VALVE LIFTERS

MOSSBERG NEW PARALLEL

For Ford Cars

The double leverage lifting design gives an easily operated lifter for all Ford cars. The swinging bucket on the top end allows the spring to rise in the proper plane without binding, and the pins are then easily removed. The pivoted cup on the upper side allows perfectly parallel raise on the spring. All steel construction. Burnished nickel finish.

No. 654 Length, 7 inches; shipping weight, 10 oz .....Each, **$0.90**

One in a Carton

MOSSBERG UNIVERSAL

For removing and replacing valves in all kinds of motors. Fits up to and including heaviest trucks. Goes under the spring washers readily, raises with slight pressure of the fingers and locks securely with a ratchet.

No. 655 Length, 11½ inches; shipping weight of 2 lifters, 2¼ lbs..... Each, **$1.50**

Two in a Carton

VLCHEK

Drop forged steel, black japanned finish. The sliding cam increases the leverage as the valve spring is compressed and allows quick action with the slightest ease.

No. 814 Length, 9¼ inches; weight, 18 oz. ..... Each, **$2.25**

One in a Box

CHROME MOLYBDENUM STEEL INTERCHANGEABLE SOCKETS AND ACCESSORIES

MOSSBERG REVERSIBLE RATCHET HANDLES

Is a reversible ratchet handle that is responsible for the general adoption of interchangeable sockets. Made of heavy sheet steel. Buffed nickel finish.
No. 350 Length, 10 inches. Shipping weight, 18 ounces .....Each, **$2.25**
One in a Carton

MOSSBERG 10 INCH EXTENSION BARS

Is a ten-inch extension bar when used with universal joints and other useful units gives the desired length to reach out of the way places.
No. 373 Length, 10 inches. Shipping weight of six, 5 lbs.....Each, **$0.60**
Six in a Carton

MOSSBERG 5 INCH EXTENSION BARS

Is a five-inch extension; is very useful in adjustments where clearance is at a minimum.
No. 372 Length, 5 inches. Shipping weight of 6 bars, 3 lbs.....Each, **$0.50**

MOSSBERG OFFSET HANDLES

An assortment of sockets and this handle will give you all the desired openings in offset wrenches
No. 333 Length, 9½ inches Shipping weight of 6 wrenches, 4 lbs... Each, **$0.35**
Six in a Carton

MOSSBERG 6 INCH TEE HANDLES

Is a very handy tee wrench for socket work in tight places.
No. 333 Length, 6 inches; width, 7½ inches Shipping weight of 6 handles, 6 lbs .....Each, **$0.65**
Six in a Carton

MOSSBERG SPEED BRACES

A popular Speeder among mechanics in taking down and assembling cars. Also a needed item for the car owner's wants.
No. 367 Length, 19⅝ inches. Shipping weight of 6 handles, 14 lbs.....Each, **$1.00**
Six in a Carton

MOSSBERG SLIDING TEES

The sliding Tee is not only an interchangeable Tee handle but can be used as an offset wrench.
No. 370 Length, 10 inches. Shipping weight of 6 wrenches, 5 lbs.....Each, **$1.25**
Six in a Carton

MOSSBERG UNIVERSAL JOINTS

Enables adjustments to be made in the most inaccessible places and actually allows "turning around a corner"
No. 368 Fits handles, socket and bars..... ..... Each, **$1.75**

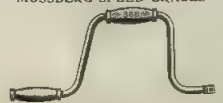
MOSSBERG CONNECTING BLOCK UNIT

Is a necessary unit so that Chrome Molybdenum steel sockets may be used with the No 330 ratchet handle.
No. 371 For use with No. 350 handle .... Each, **$0.35**

MOSSBERG 12 INCH TEE HANDLES

The revolving swivel handle is made for speed in spinning off or running down nuts, once the nut is loosened.
No. 332 Length, 12 inches; width, 7⅛ inches Shipping weight of 6 handles, 8 lbs. ..... Each, **$0.75**
Six in a Carton

MOSSBERG SPEED BRACES



An ideal wrench for the busy mechanic who must turn off the best work in the shortest possible time.
No. 366 Length, 14 inches Shipping weight of 6 handles, 11 lbs ....Each, **$1.10**
Six in a Carton

MOSSBERG FRICTIONLESS REVERSIBLE RATCHET UNITS

This ratchet is positive in action, can be reversed or locked in stationary position.
No. 369 Length, 2⅝ inches. Shipping weight, 7 ounces.....Each, **$2.50**
One in a Carton

MOSSBERG INTERCHANGEABLE SOCKETS

Chrome Molybdenum steel effectively guarantees sockets against "rounding" or "splitting" even though nuts are not fitted correctly. Height, 1⅝ inches. Shipping weight of 6 sockets, 1½ lbs.

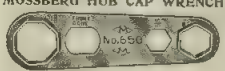
One Set in a Carton

MOSSBERG HUB CAP WRENCH



Made of heavy steel, burnished nickel finish
Fits:
Front and rear wheel hub caps
Front spindle adjusting cone.
Front spindle nut.
Rear axle shaft nut.

No. 650 Length, 8½ inches, with 1⅛ inch hexagon, 1⅛ inch octagon and front cone opening; shipping weight of 12 wrenches, 6 lbs. .....Each, **$0.20**

Twelve in a Carton

MOSSBERG MAIN BEARING BOLT RATCHET WRENCH

A quick action wrench for main bearing for front and center main bearing bolt heads. With the motor in the car, it fits center and front main bearing bolts. Fits all main bearing bolts with car disassembled. Bar is made of ½ inch round steel, parts properly hardened. Socket is of special analysis steel. Burnished nickel finish
Fits·

Crank shaft bearing bolts (center and front).

No. 620 Length, 10½ inches with ⅞ inch square opening. Shipping weight of 6 wrenches, 8 lbs. .....Each, **$2.50**

Six in a Carton

MOSSBERG BRAKE SHOE SUPPORT BOLT AND NUT, AND TRANSMISSION COVER BOLT AND NUT WRENCH

The two sizes of sockets on this wrench show the largest number of adjustments possible of any wrench combinations. Bar is made of ½ inch heavy steel, properly hardened. Sockets are round shape for minimum clearance. Burnished nickel finish.

⅞ Inch Hexagon Opening

Fits·
Ball and socket joint and nut.
Cam shaft bearing set screws.
Crank case arm bolt nuts, top and sides.
Crank case and cylinder cover cap screws.
Cylinder cover and crank case bolt and nut.
Cylinder front cover cap screws.
Cylinder valve cover screw
Dash-to-body bracket bolt nut.
Differential case stud and nut
Magnet bolts
Radiator stud nut.
Transmission cover bolt and nut.
Transmission cover screws
Universal ball cap bolt and nut.
Universal joint housing plug

¾ Inch Hexagon Opening

Fits·
Brake shoe support bolt and nut.
Commutator lock nut
Crank case front bearing and spring clip nut.
Crank shaft rear bearing bolt and nut.
Fan bracket bolt.
Front spring clip nut (previous to 1922).
Rear radius rod bolt and nut.
Spindle bolt nut.
Steering gear post castle nut.

No. 677 Length, 9⅝ inches with ⅞ and ¾ inch hexagon openings. Shipping weight of 6 wrenches, 7½ lbs.....Each, **$0.85**

Six in a Carton

STANDARD WRENCHES FOR CHEVROLET CARS

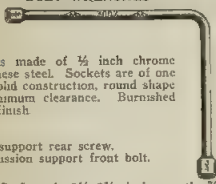
MOSSBERG RUNNING BOLT WRENCHES

Bar is made of ½ inch chrome manganese steel. Sockets are of one piece solid construction, round shape for minimum clearance. Burnished nickel finish.

Fits:
Rear axle housing oil plug
Running board bolt.

No. 3006 Length 4⅛x4¼ inches with ⅜ and ½ inch openings. Shipping weight of 6 wrenches, 3½ lbs.....Each, **$0.85**
Six in a Carton

MOSSBERG TRANSMISSION SUPPORT BOLT WRENCHES



Bar is made of ½ inch chrome manganese steel. Sockets are of one piece solid construction, round shape for minimum clearance. Burnished nickel finish

Fits:
Motor support rear screw.
Transmission support front bolt.

No. 3007 Length 9½x9½ inches with ¾ and ⅞ inch hexagon openings. Shipping weight of 6 wrenches, 18 lbs....Each, **$1.35**
Six in a Carton

MOSSBERG MAIN BEARING AND CYLINDER HEAD CAP SCREW WRENCHES

Bar is made of ⅝ inch chrome manganese steel. Sockets are one piece solid construction, round shape for minimum clearance. Burnished nickel finish

Fits:
Cylinder head cap screws.
Crank shaft main bearing screw.
Front axle spring clip nuts
Transmission support brace bolts.

No. 3008 Length 8¼x8¼ inches with ¾ and ⅞ hexagon openings. Shipping weight of 6 wrenches, 9 lbs.....Each, **$1.30**
Six in a Carton

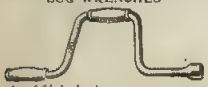
MOSSBERG RADIATOR BOLT WRENCHES

Bar is made of ½ inch chrome manganese steel. Sockets are of one piece solid construction, round shape for minimum clearance.

Fits:
Body bolt nuts.

No. 3009 Length 9½x3½ inches with ⅞ and ⅛ inch square openings. Shipping weight of 6 wrenches, 5½ lbs.....Each, **$1.00**
Six in a Carton

MOSSBERG DEMOUNTABLE RIM LUG WRENCHES



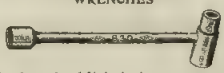
Bar is of ½ inch chrome manganese steel Socket is of one piece construction. End and center swivel grip steel handles. Properly heat treated. Burnished nickel finish.
No. 363 Length 14 inches with ¾ inch socket. Shipping weight of 6 wrenches, 10 lbs.....Each. **$1.10**
Six in a Carton

MOSSBERG UNIVERSAL WRENCHES

Bar is made of ½ inch chrome manganese steel. Sockets are of one piece solid construction, round shape for minimum clearance. Burnished nickel finish

Fits:
Bevel ring gear screws, rear axle.
Carburetor-to-intake manifold bolt.
Connecting rod cap screw.
Crank case-to-cylinder block nut.
Differential case nuts rear axle
Flywheel-to-crank shaft screw.
Generator support nut
Intake manifold flange screws.
Piston wrist pin screw.
Rear axle housing bolts and nuts.
Starting motor support screw.
Steering gear case cover screws.
Steering gear case bracket bolt.
Steering gear worm wheel clamp screws.
Tu rod yoke nut, front axle
Transmission case cover screw.
Universal ball housing collar bolts and nuts.
Valve rocker shaft cap screw.
No. 3001 Length 4x4 inches with ½ and ⅝ inch hexagon openings. Shipping weight of 6 wrenches, 8 lbs.....Each **$0.70**
Six in a Carton

MOSSBERG CYLINDER HEAD SCREW AND REAR AXLE HOUSING NUT WRENCHES



Bar is made of ½ inch chrome manganese steel, fitted at tee end with chrome manganese steel socket, round shape for minimum clearance. Burnished nickel finish.
Fits:
Bevel ring gear screws.
Rear axle housing bolts and nuts
Universal ball housing collar bolts and nuts.
Valve rocker shaft cap screw.
Water outlet to-cylinder screws
Water pump-to-cylinder screws
No. 630 Length 9¾ inches with ½ and ⅝ inch hexagon openings. Shipping weight of 12 wrenches, 8¼ lbs . . . . .Each, **$0.72**
Twelve in a Carton

MOSSBERG UNIVERSAL WRENCHES

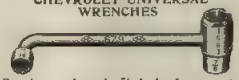
Bar is made of ½ inch heavy steel. Sockets are of one piece construction round shape for minimum clearance. Burnished nickel finish.
Fits:
Carburetor-to-intake manifold nuts.
Clutch collar adjusting screw
Connecting rod cap screw.
Cylinder head cap screw.
Differential case nuts rear axle.
Exhaust manifold flange screw.
Motor support front screw.
Propeller shaft housing rear screws.
Spring clip nuts, front and rear axle.
Starting motor support screw.
Steering gear case bracket bolt
Tie rod yoke nut.
No. 677 Length, 9⅜ inches with ⅞ and ⅝ inch hexagon openings. Shipping weight of 6 wrenches, 7½ lbs.....Each, **$0.85**
Six in a Carton

MOSSBERG WHEEL PULLERS

Has a free thrust bolt that enables the operator to tap the bolt head with a hammer in particularly difficult cases, with no injury to either hub threads or puller threads. Made of heavy drawn steel with adjustable grip clamp strap for assured safety to threads Burnished nickel finish.

Fits: Chevrolet Hubs
No. 660 Height 3⅝ inches with ¾ inch thrust bolt Shipping weight, 25 ounces . . ..Each, **$1.50**
One in a Carton

CHEVROLET UNIVERSAL WRENCHES



Bar is made of ⅝ inch heavy steel. Sockets are of specially drawn steel, round shape, allowing for minimum clearance. Burnished nickel finish

Fits: Front wheel hub flange nut; King bolt nut; Main axle shaft nut, rear axle; Plain arm nut; Rear wheel-to-brake drum screws; Spindle nut, front axle; Spring center bolts, front and rear axle; Tie rod ball nut.

No. 679 Length 10¾ inches with ⅞, ⅞ and 1⅛ inch hexagon openings. Shipping weight of 6 wrenches, 9½ lbs.....Each, **$1.25**

Bar is made of ½ inch chrome manganese steel. Round shape socket with thin walls, allowing for minimum clearance. Length 12 inches Shipping weight of 6 wrenches 10 lbs.

One Box in a Carton

INTERCHANGEABLE SOCKETS AND ACCESSORIES

MOSSBERG SMALL SERIES

Are marked to exact opening of socket. The marking of each socket represents the short diameter of nuts, bolt heads and screw heads, plus the clearance. Are drawn by pressure from cold rolled steel, thereby retaining the necessary long grain in structure. Mottled and lacquered finish.

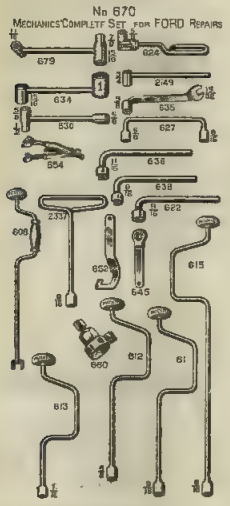
STANDARD WRENCHES FOR FORD CARS

MOSSBERG No. 670 GARAGE SET



20 Items for All Garage Work on Ford Cars

All items are of all steel construction, finished in burnished nickel.

Contains One Each

No. 608 Long Valve Grinder.
No. 611 Speeder, ⅞ inch opening
No. 612 Speeder, ⅝ inch opening.
No. 613 Short speeder
No. 615 Radiator and Fender.
No. 622 Crank shaft bearing bolt.
No. 624 Connecting rod wrench.
No. 627 Carburetor and generator.
No. 630 Triple end cylinder head screw and rear axle housing nut.
No. 634 Perch nut wrench
No. 635 Spark plug and cylinder head.
No. 636 Fly wheel cap screw wrench
No. 638 Wrist pin wrench.
No. 645 Reverse and brake pedal.
No. 652 Universal joint assembly.
No. 654 Valve Lifter.
No. 660 Wheel Puller.
No. 679 Triple end utility wrench.
No. 2149 Offset socket wrench, ¾ inch opening.
No. 2337 ⅞ inch "Tee" wrench.

No. 670 Garage Set Complete with 20 items. Shipping weight, 30 lbs. ..... Each, **$20.20**

Note: For complete list of uses for each wrench, see individual description pages

MOSSBERG No. 676 HANDY SET

All items are of ⅜ and ⅝ inch diameter heavy bar steel construction. Finished in burnished nickel. This set makes possible 67 adjustments.

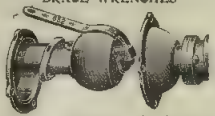
Contains One Each

No. 677 Double end utility.
No. 623 All connecting rods.
No. 679 Triple end utility
No. 645 Reverse and brake pedal tension springs.
No. 630 Cylinder head and rear axle housing.

No. 676 Handy Set Complete with 5 items. Shipping weight, 4¾ lbs.....Each, **$3.90**

Note: For complete list of uses for each wrench, see individual description, pages

MOSSBERG UNIVERSAL JOINT BRACE WRENCHES



Actually saves one man's time on this difficult job. No more "fishing" but a quick, clean assembly. Made of ⅝ inch heavy steel. Burnished nickel finish.

⅞ Inch Slot

Fits.
Universal Joint Knuckle (Male).

No. 652 Length, 8 inches; with ⅞ inch slot. Shipping weight of 6 wrenches, 4 lbs..... Each, **$0.40**

Six in a Carton

MOSSBERG SPECIAL SPEED BASE WRENCHES

For ⅞ Inch Cap Screws

Made of one piece ⅛ inch chrome manganese bar steel, properly heat treated. Deep round socket, allowing minimum clearance. Burnished nickel finish.

⅞ Inch Hexagon Opening

Fits
Coil box nuts.
Controller shaft bracket bolt and nut.
Crank case lower cover cap screws
Dash bracket-to-dash bolt and nut.
Front and rear spring retaining clip bolt.
Horn bolts and nuts.
Muffler rod nut.
Running board bolts and nuts.
Steering tube flange screw and nut.
Tire holder bracket to-body bolt and nut.
Differential drive gear screw.

No. 613 Length, 14⅛ inches, with ⅞ inch hexagon opening. Shipping weight of 6 wrenches, 9¾ lbs.....Each, **$0.82**

Six in a Carton

MOSSBERG TEE HANDLE WRENCHES

Long Pattern

Made of one piece ⅛ inch chrome manganese bar steel, properly heat treated. Round shaped sockets with thin walls, allowing minimum clearance, with reinforced faces. Burnished nickel finish.
Fits:
Crank case lower cover screw.
Differential drive gear screw.
Running board-to-fender bolt and nut, front and rear.
Steering tubing flange screw nut.

No. 2333 Length, 12 inches with ½ inch hexagon openings. Shipping weight of 6 wrenches, 10 lbs.....Each, **$0.65**

Six in a Carton

Long Pattern

Made of one piece ⅛ inch chrome manganese bar steel, properly heat treated. Round shaped sockets with thin walls, allowing minimum clearance, with reinforced faces. Burnished nickel finish.
Fits:
Connecting rod clamp screw.
Crank case and cylinder cover cap screws
Crank case arm bolt nuts, top and sides.
Cylinder valve cover screw.
Differential case stud and nut.
Inlet and exhaust clamp stud nut.

STANDARD WRENCHES FOR FORD CARS

MOSSBERG SPINDLE CONNECTING ROD BOLT NUTS, SPINDLE ARM NUT, AND REAR HUB LOCK NUT WRENCH

A most useful wrench for some very difficult adjustments and is a supplementary tool in larger sizes for unusual work. Bar is of ⅝ inch heavy steel. Sockets are of specially drawn steel, round shape, allowing minimum clearance. Burnished nickel finish.

½ Inch Hexagon Opening

Fits:
Body bracket connecting bolt nut
Fan shaft nut
Front and rear spring hanger nuts
Spindle bolt with oiler
Spindle connecting rod bolt and nut
Steering yoke clamp bolt nut
Wheel hub bolt nuts

¾ Inch Hexagon Opening

Rear spring clip nut
Spindle arm nut

⅞ Inch Hexagon Opening

Differential housing oil plug
Drive shaft castle nut
Front spring perch nut
Rear axle shaft castle nut

No. 679 Length, 10⅝ inches, with ½ inch, ⅝ and ⅞ inch hexagon openings; Shipping weight of 6 wrenches, 9½ lbs...Each, **$1.25**

Six in a Carton

MOSSBERG GENERATOR THIRD BRUSH ADJUSTABLE WRENCH

Is a handy generator wrench. Made of special analysis steel. Burnished nickel finish.

No. 644 With ⅞ and ½ inch openings. Shipping weight of 12 wrenches, 1 lb..... Each, **$0.20**

Twelve in a Carton

MOSSBERG FOURTH CONNECTING ROD WRENCH

Is one of the best wrenches for adjusting connecting rod clamp screws and particularly quick acting on No. 4 connecting rod. Bar is of ½ inch heavy steel. Socket is of special analysis steel, round shape, allowing minimum clearance. Burnished nickel finish

Fits:
Connecting rod cap bolt nut
Cylinder head cap screws
Cylinder water inlet connecting screw

No. 628 Length 14½ inches, with ⅝ inch hexagon opening; Shipping weight of 6 wrenches, 10 lbs.....Each, **$1.75**

Six in a Carton

MOSSBERG CONNECTING ROD WRENCH

Fits the fourth connecting rod bolt and units without dismounting the motor. Bar is made of ½ inch chrome manganese steel. Deep dome top sockets of special analysis steel round shape for minimum clearance. Burnished nickel finish

Fits:
Commutator case support bolt
Connecting rod cap bolt nut
Crank case front bearing screw
Cylinder front cover cap screw (starter type)
Cylinder head cap screws.
Cylinder head outlet connecting screws.
Cylinder water inlet connecting screw.
Demountable Rim bolt nut.
Drive shaft roller bearing set screw.
Drive shaft roller bearing stud nut.
Timing gear cover.

No. 623 Length, 10¼ inches, with ⅝ inch hexagon opening; shipping weight of 6 wrenches 5¼ lbs . . . . . Each, **$0.58**

Six in a Carton

MOSSBERG CONNECTING ROD WRENCH

Fits the fourth connecting rod bolts and units without dismounting the motor. Bar is made of ½ inch chrome manganese steel. Ratchet parts properly hardened. Socket is of special chrome steel alloy, round shape for minimum clearance. Burnished nickel finish.

Fits:
Commutator case support bolt.
Connecting rod cap bolt nut.
Crank case front bearing screw.
Cylinder front cover cap screw (starter type).
Cylinder head cap screws
Cylinder head outlet connecting screws.
Cylinder water inlet connecting screw.
Demountable Rim bolt nut.
Drive shaft roller bearing set screw.
Drive shaft roller bearing stud nut.
Timing gear cover.

No. 624 Length, 10¼ inches, with ⅝ inch hexagon opening; shipping weight of 6 wrenches. 7¼ lbs..... Each, **$2.50**

Six in a Carton

MOSSBERG DEMOUNTABLE RIM BRACE WRENCHES

Made of one piece ½ inch chrome manganese bar steel with deep sockets. Properly heat treated. End and center swivel grip steel handles. Burnished nickel finish.

No. 361 Length, 14 inches; throw 5¼ inches with ⅝ inch hexagon opening. Shipping weight, 6 wrenches, 10 lbs.....Each, **$1.10**

Six in a Carton

MOSSBERG ⅝ INCH CAP SCREW WRENCH

So many nuts, bolts and screws on a Ford Car are of this size that this wrench is actually indispensable. Made of ½ inch chrome manganese steel, deep sockets of special analysis steel, round shape for minimum clearance. Burnished nickel finish.

Fits:
Crank case and cylinder cover cap screws.
Crank case arm bolt nuts, top and sides.
Cylinder cover and crank case bolt and nut.
Cylinder front cover bolt and nut.
Cylinder front cover cap screws.
Cylinder valve cover screw.
Inlet and exhaust clamp stud nut.
Radius rod ball cap stud nut.

No. 625 Length, 7¼ inches, with ⅝ inch hexagon opening. Shipping weight of 6 wrenches, 5 lbs.....Each, **$0.54**

Six in a Carton

SPECIAL DESIGN WRENCHES FOR INDIVIDUAL CARS

MOSSBERG

Bar is made of ½ inch heavy steel. Sockets are of one piece solid construction, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars:

Autocar, Chandler, Chevrolet, Cleveland, Dodge, Dort, G. M. C., Liberty, Oakland, Paige, Pierce-Arrow, Reo, Seldon, Studebaker, Wills-St. Claire.

No. 677 Length, 9¾ inches; width, ⅞ and ¾ inch hexagon openings. Shipping weight of 6 wrenches, 7½ lbs.....Each, **$0.85**

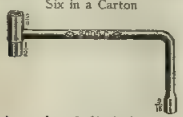
Six in a Carton

Bar is made of ⅞ inch heavy steel. Sockets are of one piece solid construction, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars:

Buick, Cadillac, Chandler, Cleveland, Chalmers, Dodge, Dort, Durant, Essex, G. M. C., Haynes, Hudson, Hupmobile, Jordan, Liberty, Lincoln, Maxwell, Mitchell, Nash, Oakland, Oldsmobile, Overland, Pierce-Arrow, Reo, Seldon, Studebaker, Wills-St. Claire, Winton.

No. 679 Length, 10¾ inches with 1⅛, ⅞ and 1⅜ inch openings. Shipping weight of 6 wrenches, 9¾ lbs.....Each, **$1.25**

Six in a Carton



Bar is made of ½ inch heavy steel. Sockets are of special steel, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars

Buick, Dodge, Winton, Chandler.

No. 2005C Length, 9⅞ inches with ½, ⅝ and ¾ hexagon openings. Shipping weight of 6 wrenches, 6 lbs.....Each, **$0.85**

Six in a Carton

Bar is made of special analysis steel. Sockets are of special steel, round shape, allowing for minimum clearance. Burnished nickel finish
Fits cars:

Chevrolet, Liberty.

No. 2010B Length, 8⅛ inches with ⅜ and ⅝ inch hexagon openings. Shipping weight of 6 wrenches, 4¾ lbs.....Each, **$0.90**

Six in a Carton

MOSSBERG

Bar is made of special analysis steel. Sockets are of special steel, round shape allowing for minimum clearance. Burnished nickel finish
Fits cars.

Autocar, Buick, Cadillac, Chandler, Chevrolet, Cleveland, Dodge, Franklin, G. M. C., Haynes, Seldon, Studebaker, Stutz.

No. 2010C Length, 8¼x8¼ inches with ¾ and ⅞ inch hexagon openings. Shipping weight of 6 wrenches, 7½ lbs....Each, **$0.85**

Six in a Carton

Bar is made of special analysis steel. Sockets are of special steel, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars:

Autocar, Buick, Chandler, Chevrolet, Essex, G. M. C., Hudson, Oldsmobile, Scripps-Booth, Stutz.

No. 2010D Length, 9⅛ inches with ⅞ and 1⅛ inch openings. Shipping weight of 6 wrenches, 10¾ lbs.....Each, **$0.85**

Six in a Carton

Bar is made of special analysis steel. Socket is of special steel, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars:

Chandler, Chevrolet, Cole, Franklin, G. M. C., Grant, Jordan, Marmon, Maxwell, Pierce-Arrow, Seldon, Stutz, Wills-St. Claire

No. 2020D Length, 5⅝ inches with ⅛ inch hexagon opening Shipping weight of 6 wrenches, 18 ounces.....Each **$0.50**

Six in a Carton

Bar is made of special analysis steel. Sockets are of special steel, round shape, allowing minimum clearance. Burnished nickel finish.
Fits cars

Chalmers, Dort, Durant, Jordan, Liberty, Mitchell, Nash, Overland, Oldsmobile, Scripps-Booth, Studebaker, Stutz, Willy-Knight.

No. 2025A Length, 10 inches with ⅝ and ¾ inch hexagon openings. Shipping weight, 6¾ lbs.....Each, **$0.85**

Six in a Carton

MOSSBERG

Bar is made of special analysis steel. Sockets are of special steel, round shape, allowing for minimum clearance. Burnished nickel finish.
Fits cars.

Autocar, Buick, Cadillac, Chalmers, Chandler, Cleveland, Dodge, Dort, Durant, Essex, G. M. C., Haynes, H. C. S., Hudson, Hupmobile, Jordan, Lincoln, Marmon, Maxwell, Mitchell, Nash, Oldsmobile, Overland, Peerless, Pierce-Arrow, Reo, Scripps Booth, Seldon, Studebaker, Stutz, Willys-Knight, Winton

No. 2025B Length, 10¾ inches with 1 and 1⅛ inch openings. Shipping weight of 6 wrenches, 15 lbs.....Each, **$0.95**

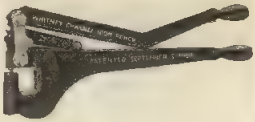
HAND PUNCHES.

WHITNEY PORTABLE.

No. 2. Capacity, 5/16 inch hole through ¼ inch iron; length overall, 23 inches; depth of throat 1 11/16 inches. Equipped with one die and one punch; state size wanted, ⅛ to ½ inch by 32nds. Wt. each, 14 lbs. ..Each **$20 00**



For Channel Iron.

Capacity, ¼ inch hole through ⅛ inch iron, punches to center of 4 inch channel iron with 1½ inch flanges; depth of throat 1 ⅞ inches. Length, 23 inches. Equipped with one die and one punch; state size wanted, ⅛ to ½ inch by 32nds.

No. 2C. Wt. ea., 16½ lbs. ..Each **$24 00**

Extra Dies.

Nos. 2 and 2C. 1/8, 5/32, 3/16, 7/32, 1/4, 9/32, 5/16, 11/32, 3/8, 13/32, 7/16, 15/32 and ½ inch.....Each **$1 00**

TINNERS' PUNCHES.

WHITNEY.

One Hand.

No. 4. Capacity, ¼ inch hole through 16 gauge iron; punches to center of 3¾ inch circle; equipped with 3 punches and dies; length, 8½ inches. Wt. each, 2¾ lb. .....Each **$8 00**

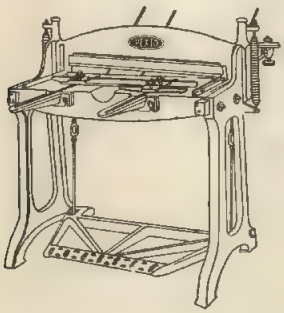
Extra Punches. 1/16 to 17/64x1/64 inch .....Each **$0 50**

Extra Dies. 1/16 to 17/64x1/64 inch .....Each **$0 50**

SHEET METAL WORKERS' MACHINES.

On the following pages we show the famous Peck, Stow & Wilcox Co's "Pexto" line of sheet metal workers' machines.

SQUARING SHEARS.



Silver City.

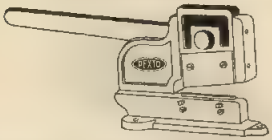
Capacity, 18 Gauge Iron and Lighter.

These new patterns are preferred over other shears owing to their extra wide Bed Plate and are so proportioned that they will cut up to the full rated capacity very much easier than any other similar shears of the same capacity. They are guaranteed to give very excellent service and Pexto high grade quality materials combined with thorough workmanship make them the most desirable up-to-date, medium weight shears that the market offers.

No. 132. Length for sheets, 30 inches wide; long front arms, 19 inches; length, rear gauge arms, 30 inches; width of bed, 14 inches. Wt., 510 lbs.....Each **$110 00**

SHEET METAL WORKERS' MACHINES.

CUT OFF SHEARS.

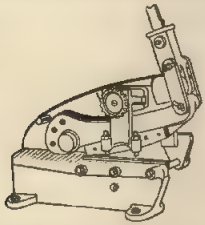


Capacity Iron or Steel, 1/16 Inch and Lighter.

This machine is constructed to cut sheet steel with the greatest ease. Its eccentric cutting device requires very little effort to cut sheet metal up to the full rated capacity. It will prove a handy machine for the shop, and on account of its light weight is easily carried to the job to be done outside

No. 253. Length of blades, 3½ inches; length of bed, 10 inches; height of bed, 6½ inches; length overall, including lever, 18 inches. Shipping wt., 17 lbs.....Each **$22 50**

LEVER SLITTING SHEARS.



Shipment from Factory only.

Capacity, 10 Gauge Iron and Lighter.

Will Cut Bar Iron ¼x1½ Inch.

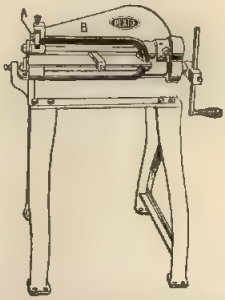
These Shears are commended for the Slitting of Sheets, length or crosswise, with ease to their full capacity. They are patterned so as to allow sheets to pass freely, and proportioned so as to obtain the greatest strength and durability. They are furnished with or without Rod Cutting Attachment.

It must be remembered that the service a Lever Shear will give depends greatly on the care exercised in keeping up the adjustments provided for the Blades and in keeping the Blades sharp.

No. 0296. Length of cut, 7¾ inches; length of gauge rod, 14½ inches, without rod cutting attachment. Shipping wt., boxed, approximately 175 lbs.....Each **$75 00**

No. R0296. Length of cut, 7¾ inches; length of gauge rod, 14½ inches, **with rod cutting** attachment. Shipping wt., boxed, approximately 180 lbs.....Each **$88 00**

SLITTING SHEARS.



Capacity, 16 Gauge Iron and Lighter.

These Shears will prove a time saver in any shop. They permit the most rapid means for slitting iron used in cornice, blow-pipe, ventilation work, etc. They may be utilized for conveniently cutting large irregular curves and circles when following a scribed line in a fraction of the time it takes to do the work with snips or bench shears. The Cutters are made from a special high grade tool steel, properly hardened and tempered and have two Cutting Edges, making them reversible. The Crank is adjustable to different leverages. Bearings (A) are adjustable to take up wear of the Cutters and the Cutting Head (B) is of compact construction and is mounted on heavy cast iron legs. A desirable substitute for the 8-foot Squaring Shears where floor space is limited.

No. 255. Dia. of cutters, 3 1/16 in.; depth cutting head to gauge 18 in., depth cutting head to frame 19 in., size table 20x8 inches. Wt., crated for shipment, 330 lbs..Each **$100 00**

TINNERS' BENCH SHEARS.

As regularly made, bench shears have a right hand cut with the lower blade on the right side of the shear. These shears are much larger than the ordinary tinners' hand shears. Pexto bench shears are made of the high-grade metals and with the same skilled workmanship as characterizes the entire line.

Nos.	1	2	4
Cuts Iron, No.	18	19	20
Length of Cut, ins.	9	8¾	7⅝

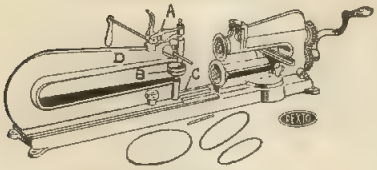
Each	$18 50	16 50	13 50

SHEET METAL WORKERS' MACHINES.

CIRCULAR SHEARS.



Shipment from Factory only.

Capacity, 22 Gauge Iron and Lighter.

Most suitable for cutting outside circles, trimming or squaring tin plate, sheet iron, brass and copper.

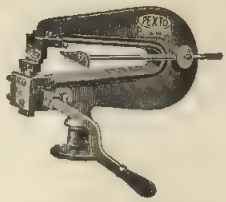
A polished graduated scale is attached to the bed for the purpose of securing quick and accurate adjustment of the sliding arm They are fitted with quick-acting eccentric lever, which clamps material between discs with great rapidity, and releases the blank instantly

Rubber covered discs which prevent the possible slipping of blanks is an exclusive Pexto feature

No. 278. Diameter cutters, 3 1/16 in.; diameter clamping discs, 2 inches; depth cutting head to gauge, 9¼ inches; depth cutting head to frame, 10¼ inches; depth circle arm, 16¼ inches. Will cut 2¾ to 22-inch circles from square blanks. Shipping wt., approx. 140 lbs. boxed...Each **$66 50**

No. 280. Capacity, 18 gauge iron and lighter; diameter cutters, 3½ inches; diameter clamping discs, 2¾ inches; depth cutting head to gauge, 9¾ inches; depth cutting head to frame, 10¼ inches; depth circle arm, 22¼ inches; will cut 3 to 31 inch circles from square blanks. Shipping wt., approx. 300 lbs. boxed.....Each **$85 00**

SCROLL SHEARS.



Shipment from Factory only.

Capacity, 20 Gauge Iron and Lighter.

Will cut circles, ovals, ogees and all irregular shapes with the greatest ease. Are well adapted for cutting from the center of a sheet.

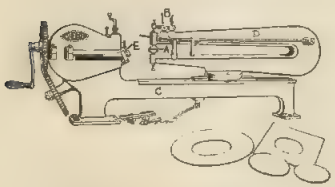
Mounted in a standard which screws to the bench and adjustable to any angle required.

The length of cut is regulated by means of a set screw in bottom of lower blade holder cap. To shorten cut, turn screw in; to lengthen cut turn screw out. Upper blade can be adjusted for wear by means of the two rear adjusting screws.

No. 268. Length of cutting blades, 4 inches; depth cutting head to gauge, 10¾ inches; depth cutting head to frame, 12 inches. Shipping wt., approx. 100 lbs. boxed. Each **$55 00**

No. 269. Length of cutting blades, 4¼ inches; depth from cutting head to gauge 17 inches; depth from cutting head to frame, 18¼ inches. Shipping wt., approximately 140 lbs. boxed .....Each **$67 50**

RING AND CIRCULAR SHEARS.



Shipment from Factory only.

Capacity, 20 Gauge Iron and Lighter.

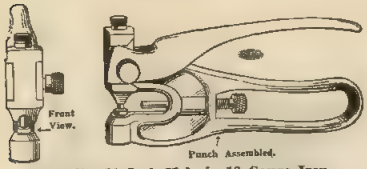
These improved patterns make a very useful and efficient bench ring and circular shears intended for cutting circles or internal rings and irregular curves. In circular cutting the blanks are clamped between rubber covered discs by means of a quick acting, eccentric lever device adjustable for exerting extreme uniform pressure to prevent the work from slipping and insuring more accurate cutting. This method permits the clamping and removing of blanks with greater rapidity than with old crank screw method. The bed on which the tail piece slides is graduated in inches and fractions of inches for quick setting of the tail piece for the size of circle to be cut. The angular position of cutters allows for as clean cutting on the inside as on the outside of circle.

No. 298. Diameter of cutters 1⅝ inches; diameter of clamping discs, 2¼ inches; depth from cutting head to gauge, 9⅛ inches; depth from cutting head to frame, 10 inches; depth of circle arm, 16¾ inches. Will cut circles 3¼ to 22 inches from square blanks. Will cut rings as small as 3¼ inches, inside diameter, and as large as 22 inches, outside diameter. Shipping wt., approximately 200 lbs. crated .....Each **$84 00**

No. 299. Diameter of cutters, 1⅝ inches; diameter of clamping discs, 2¼ inches; depth cutting head to gauge, 9⅛ inches; depth cutting head to frame, 10 inches; depth circle of arm, 30½ inches; will cut circles, 3¼ to 42½ inches from square blanks; will cut rings small as 3¼ inches inside diameter, and as large as 42½ inches outside diameter. Shipping wt., approx. 300 lbs. crated.....Each **$109 00**

SHEET METAL WORKERS' MACHINES.

WIZARD HAND PUNCHES.



Capacity, ¼ Inch Hole in 18 Gauge Iron.

The Wizard Hand Punch works like magic, it is powerful in action, and Drop Forged from Steel. Excluding the Punch and Die, only five parts are used in its construction. No links to spring, no rivets to split or strip. No pins, small screws and other parts to become easily worn or lost.

To remove the Punch, take out the easy-working Knurled Head Screw (5). The Die is slotted and has a screw thread, easily removed with the ordinary screw driver. A simple Gauge is fitted and which is adjusted through turning Knurled Head.

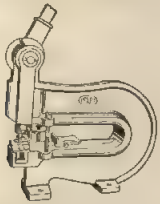
A powerful, and the simplest, easiest-working, interchangeable Hand Punch ever devised for meeting the exacting demands of the mechanic in the shop and for out-of-shop work.

The Wizard is guaranteed to withstand the general hard usage which a Hand Punch usually undergoes. An actual test will prove the advantages gained by the use of this little tool.

No. 789C. Furnished regularly with ⅛, 3/16 and ¼ inch punches and dies; 5/32, 7/32 and 17/64 inch sizes can be furnished from factory. Length overall, 8¼ inches; depth of throat, 1½ inches. Wt., 3 lbs.....Each **$10 00**

One in a box.

SAMSON PUNCHES.

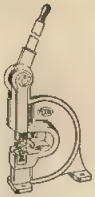


Shipment from Factory only.

With Adjustable Gauge.

Pexto Samson Punches are designed for great strength and rigidity, making them exceptionally useful machines for general work. The deep throat in these machines will be found a great advantage. The dies and punches as regularly made are intended for use on stock up to their full rated capacity but where clean punching in tin or light metal is desired, a closer fitting die is preferable which can be furnished when so ordered at the price of the regular dies. Fitted with adjustable gauge.

No 675. With stay bolts in place will punch 9 gauge iron; with stay bolts removed, 12 gauge. Depth of throat to frame, 15 inches; to gauge, 14½ inches. Will center sheets 7 inches wide when stay bolts are in place, 30 inches wide when stay bolts are removed. Furnished with three sets of dies and punches: ⅜, 3/16 and ½ inch. Shipping wt., approx. 160 lbs. boxed.....Each **$50 00**



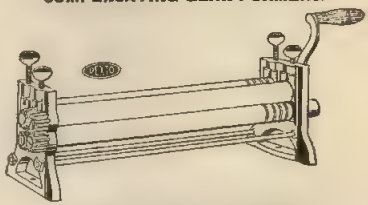
No. 676. With stay bolts in place will punch ⅝ inch holes in 5/16 inch iron and with stay bolts removed will punch ⅜ inch holes in 3/16 inch iron; depth throat to frame, 15 inches; depth throat to gauge, 14½ inches; with stay bolts in place will center sheets 7 inches wide; with stay bolts removed will center sheets 30 inches wide; furnished with 3 sets of dies and punches, ¼, 5/16 and ⅜ inch. Shipping wt., approx. 240 lbs.....Each **$100 00**

BABY HANDY SEAMERS.

A handy pocket seamer, very useful where a larger seamer would not be practical. It is adjustable for seams of different widths and as it is light, it can be carried in tool kit or pocket, making a handy tool for outside work.

No. 791. Length of blade, 3½ inches; width, ⅞ inch; size overall, 7¼x3½ inches. Adjustable for seams up to ⅞ inches. Wt. each, 1 lb.....Each **$3 00**

COMPENSATING GEAR FORMERS.



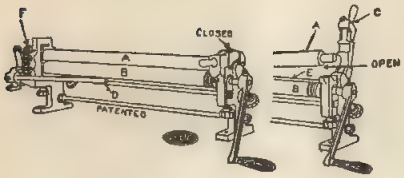
Capacity, 22 Gauge Iron and Lighter.

These Formers have Solid Housings and are fitted with machine cut Steel Compensating Gears. Gears to run smoothly should mesh constantly to a certain depth and the shape of the teeth should be accommodated to such depth. In these Formers the gears on the Gripping Rolls do not mesh with each other but with two extra fitted to the frame when the Gripping Rolls are moved the mesh of the gearing is unchanged. This insures uniformity of action and durability for the gears, they running more smoothly than cast iron cogs without danger of slipping or breaking with whatever thickness of metal is used. Grooves cut in rolls are intended to allow work with a wire to be formed; wire should only be formed between the grooves cut for that purpose.

No. 373. Length of rolls for sheets 30 inches wide; diameter of rolls, 2 inches. Wt.,approx.140 lbs. boxed.Each **$40 00**

SHEET METAL WORKERS' MACHINES.

LIGHTNING SLIP ROLL FORMERS.



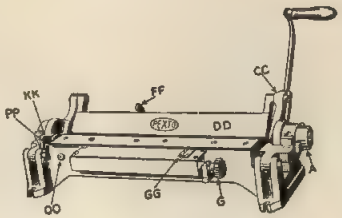
Capacity, 22 Gauge Iron and Lighter.

New original Pexto Features are embodied in these Forming Machine Patterns that place them in a class by themselves. They are greatly improved over their old Slip Roll Pattern Forming Machines and those which the present market offers. A careful study of the illustration shows that the time and steps saved through being able to perform all operations at one end of the machine the convenient end where the crank is fitted. Without necessitating the changing of positions the sheet to be formed is placed between the Gripping Rolls (A) and (B). The cylinder formed, open Latch (C), then by means of Lever (D) raise Upper Gripping Roll (A) and slip the formed cylinder from the Roll (A). It will be readily seen that all operations are performed at the crank end of the machine—a Pexto innovation that can be well appreciated by the mechanic who has operated the old pattern Slip Roll Former. Rolls (B) and (E) are adjusted with knurled Screws, and once adjusted they cannot slip. The Gears (F) are steel, machine cut, running more smoothly than cast iron gears, without danger of slipping or breaking with whatever thickness of metal is used. Grooves cut in rolls are intended to allow work with a wire to be formed.

The Roll Raising Mechanism in these machines is so balanced that the Roll (A) is easily lifted with a slight pressure on the Lever (D). The Latch (C) is released and closed with one movement, and is self-locking.

No. 382. Length rolls for sheets 30 inches wide; diameter of rolls, 2 inches; gripping rolls A and B have an extreme clearance of ½ inch. Wt. approx. 185 lbs., boxed .....Each **$60 00**

ARROW BAR FOLDERS.



These Folders, recently improved, have been giving universal satisfaction for a great many years. They are intended for forming the edges of sheet metal at various angles. They will produce closed locks as well as open or round locks for inserting a wire in the flat sheet.

The tough mixture of good iron and accurate designing evidenced only in the Pexto Line of Folding Machines makes up for proper proportionment of the Folding Bar eliminating cumbersome weight, and where speed and great durability are essential, especially in tinware and other light manufacturing, these patterns will prove superior over any other makes.

Open or round locks for wiring are made by raising the Folding Bar (CC) at right angle. The Wing (DD) is then adjusted for the size of wire to be used through the setting of Wedge (FF) that moves to left and right on Folding Bar. An improvement consisting of a Pin in the frame prevents the dropping of the Wing below the Gripping Jaw the Wing (DD) dropping in a proper position automatically in the process of folding, producing accurate and uniform round locks. This improved adjustment permits for more rapid execution, the blanks sliding more easily between the Gripping Jaw without obstruction.

Gauge (GG) is adjustable, and regulates the width of fold by turning Gauge Knob (G). The width to which the Gauge is adjusted is indicated on graduated brass plate and after set is firmly secured through Lock Screw (OO).

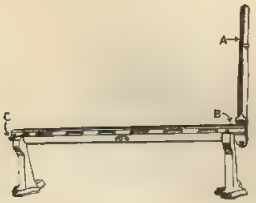
Adjustable Stop (A) is provided to permit the forming of any desired angle, in addition to regular Square and Bevel Steps (KK-PP).

A Gripping Jaw clamps the material securely while the bending takes place, guaranteeing the forming of square joints or angles, narrow or wide locks of uniform width the entire length.

No. 63. Capacity 3/16 inch locks on No. 22 gauge iron and lighter, ⅛ inch locks on No. 24 gauge iron and lighter, 3/32 inch locks on XX tin; length for sheets 30 inches wide; will form closed and open locks ⅛ to 1 inch and will form open locks to receive wire up to ¼ inch. Wt. approx., 140 lbs. boxed .....Each **$30 00**

SHEET METAL WORKERS' MACHINES.

WRIGHT'S PIPE FOLDERS.

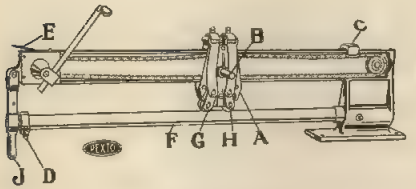


Capacity, No. 24 Gauge Iron and Lighter.

Will fold the edges of sheets formed in cylindrical shape, also for edging sheets while in the flat; for folding the edges of pipe of light material, for stove pipe, etc., this pattern is preferable over the Champion Pattern Pipe Folder as it will close down the lock ready for grooving with little or no malleting; gauge is adjustable for forming two sizes of locks, ¼ and ⅜ inches. Using strips of 22 gauge soft steel cut to correct width and placed under lip of folding blade, locks ⅛ and ⅝ inch can be formed.

No. 1 For length of sheets, width 30 inches; will form locks ¼ and ⅜ inches. Shipping wt. approximately 80 lbs. boxed .....Each **$45 00**

RAPID GROOVERS.



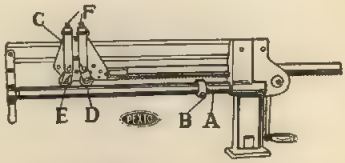
Capacity 24 Gauge Iron and Lighter.

The best machine of its kind for grooving the longitudinal seams in stove pipe and other sheet metal cylinders. It differs from the ordinary groovers in that it is more rapid as the operator stands in front of the machine and does not have to change his position when inserting and removing work and operating the machine. The traveling carriage is quickly and easily returned to the starting point by means of handle (A). Adjustable stop (C) on upper bar stops the traveling carriage at any desired point to suit length of work. Adjustable stop on lower bar prevents work from slipping while being grooved. A spring (E) holds latch out of the operator's way while work is removed and inserted in the machine.

Lower bar or horn is reversible so that either the flat surface or one of the grooves which is planed into the horn can be turned upward, permitting the locating of seams on the inside or the outside of the work. The seam is put on the inside of work by means of flat roll which press the seam into one of the grooves planed into the horn. Outside grooving is done in the usual manner by using the grooved roll and flat surface of horn. The traveling carriage (A) has two rolls, one for grooving (G) and one for flattening (H) the seam at the same operation. The grooving carriage (A) is so arranged that the flattening roll (H) runs idle on the outward run and the grooving roll (G) idle on the backward run The two rolls do not press the seam at the same time, therefore easy grooving is assured. The carriage bar and grooving horn are steel.

No. 518. Will groove work 30 inches long and pipe as small as 2 inches in diameter. Rolls are furnished, one each with ¼, 5/16 and ⅜ inch grooves and one flattening roll. Shipping wt., approximately 200 lbs. boxed....Each **$75 00**

GENERAL PURPOSE GROOVERS.



Capacity, 22 Gauge Iron and Lighter.

These machines are constructed for general grooving and have an improvement consisting of an attachment which grooves and flattens the seams of cylinders in one operation. Lower Bar or Horn (A) is reversible, so that either the flat surface or one of the grooves which is planed into the Horn can be turned upward, permitting the locating of seams on the inside or the outside of the work. The seam is put on the inside of work by means of Flat Roll which presses the seam into one of the grooves planed in the Horn; outside grooving is done in the usual manner by using the Grooved Rolls on flat surface of Horn. An Adjustable Stop Collar (B) is fitted on Lower Horn (A) to prevent work slipping while being grooved.

An improved feature will be found in the Carriage (C) which holds Flattening Roll (D) and Grooving Roll (E) The Flattening Roll (D) runs idle on the outward run and the Grooving Roll (E) runs idle on the backward run. In other words, both Rolls do not press on the seam at the same time, which makes for easy grooving. The old style Friction Spring and Roll for tension are not used, the tension being secured through a more simple arrangement at (F), which permits of greater uniformity in the seams grooved and eliminates frequent spring breakage. Furnished with ¼, 5/16 and ⅜ inch grooving rolls and one flattening roll.

No. 506. Will groove work 20 inches long; 2 inches is the smallest diameter of pipe that can be grooved. Shipping wt. approximately 170 lbs. boxed .....Each **$65 00**

SHEET METAL WORKERS' MACHINES.

BENCH STANDARDS.

Regular Offset
No. 975.

Wiring Offset
No. 976.

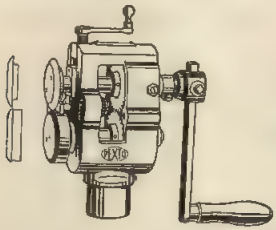
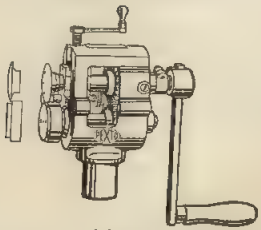
WIRING MACHINES.



No. 525. With standard. Diameter of rolls, 3 inches. Will receive wire up to No. 0 gauge. Furnished complete with offset bench standard No. 976. Shipping wt., 31 lbs. ..... Each **$30 00**

BURRING MACHINES.



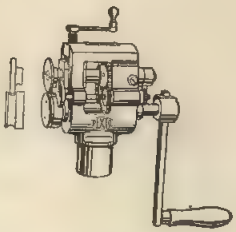
Columbian.

Burring machines in open pattern with solid frame of improved design well known for their splendid wearing qualities, accuracy and ease of operation. The rolls are forged from special high grade material giving extreme wearing qualities to the fine edge in the rolls necessary to produce a satisfactory uniform flange on a number of blanks. Furnished complete with No. 976 standard.

No. 576. Small; with standard. Diameter of rolls, 1½ inches; widest flange or burr that can be turned, 3/16 inch. Shipping wt., 21 lbs. ..... Each **$24 00**

No. 577. Large; with standard. Diameter of rolls, 2⅛ inches; widest flange or burr that can be turned, ¼ inch. Shipping wt., 25 lbs. ..... Each **$25 00**

TURNING MACHINES.



Columbian.

A highly serviceable turning machine with solid open frame of the highest grade of excellence The tinsmith or sheet metal worker will find in these patterns every modern improvement combined with the highest quality materials. Furnished complete with No. 976 standard.

No. 541. Small; with standard. Diameter of rolls 2 1/16 inches; smallest diameter of wire that can be used, 10 gauge; largest, 7 gauge. Shipping wt., 25 lbs. . . Each **$26 00**

No. 542 Large; with standard. Diameter of rolls, 3 inches; smallest diameter of wire that can be used, 9 gauge; largest, 4 gauge. Shipping wt., 31 lbs. . . Each **$27 00**

SETTING DOWN MACHINES.

Columbian.

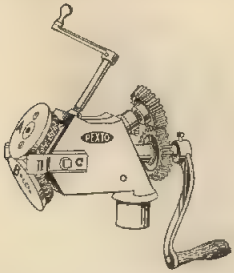
Capacity 24 Gauge Iron and Lighter.

The extra small faces on this machine make it possible to burr or flange very small can bottoms and bodies. This feature adapts the machine to work where a machine with larger rolls would prove impracticable. Furnished with No. 975 standard.

No. 556. For seams up to 3/16 inch. Shipping wt., approximately 28 lbs. ..... Each **$26 00**

SHEET METAL WORKERS' MACHINES.

SETTING DOWN MACHINES.



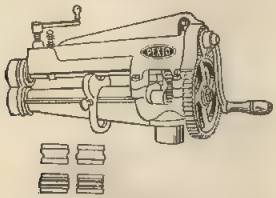
Pexto.

Capacity 24 Gauge Iron and Lighter.

The improvements in this setting down machine adapts it for setting down the seams on differently shaped vessels to better advantage than any other design. The inclined position of both upper and lower faces allows work to be held up or down and seams to be started inward while setting down, thereby facilitating the operation of double seaming. Adjustable gauges with idler rollers are fitted. Furnished with No. 975 standard.

No. 561. With standard. For seams up to ⅝ inch wide. Shipping wt., approximately 60 lbs. .....Each **$32 00**

BEADING MACHINES.



Standard.

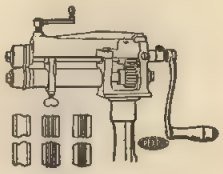
Capacity 20 Gauge Iron and Lighter.

Furnished with three sets of rolls—single bead, ogee bead and triple bead.

No. 617. Depth of throat to frame, 13 inches; to gauge, 12 inches; distance between shaft centers, 2⅝ inches; diameter of rolls, 2¾ inches; width of rolls, 1⅞ inches; ratio of gearing, 3 1/3 to 1. Sizes of beads in rolls, single, ⅜ inch; ogee, 1 inch; triple, 1 inch. Furnished with No. 978 standard. Shipping wt., approximately 165 lbs. boxed .....Each **$65 00**

No. 619. Depth of throat to frame, 7½ inches; to gauge, 6¾ inches; distance between shaft centers, 2½ inches; diameter of rolls, 2⅝ inches; width of rolls, 1⅝ inches; ratio of gearing, 2½ to 1. Sizes of beads in rolls, single, 5/16 inch; ogee, ⅞ inch; triple, ⅞ inch. Furnished with No. 978 standard. Shipping wt., approximately 110 lbs. boxed .....Each **$55 00**

BEADING MACHINES.



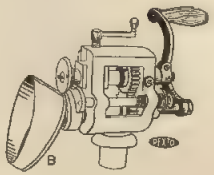
Light.

Capacity 24 Gauge Iron and Lighter.

Furnished with four pairs of rolls—one pair each ogee, ¾ inch; triple, ⅝ inch and single, ¼ and 3/16 inch. Furnished with No. 975 standard.

No. 620. Depth of throat to frame, 6¼ inches; to gauge, 5½ inches; diameter of rolls, 1 15/16 inches; width of rolls, 1 7/16 inches; distance between shaft centers, 1⅞ inches. Shipping wt., approx. 50 lbs. boxed....Each **$40 00**

ELBOW EDGING MACHINES.



Columbian.

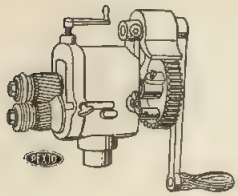
Capacity 24 Gauge Iron and Lighter.

For a small output of elbows this pattern will answer the purpose, but for a large elbow manufacturer we suggest a more rigid machine. Furnished with No. 975 standard.

No. 551. Diameter of rolls 2⅛ inches. Shipping wt., approximately 25 lbs. .....Each **$26 00**

SHEET METAL WORKERS' MACHINES.

CRIMPER AND BEADER.



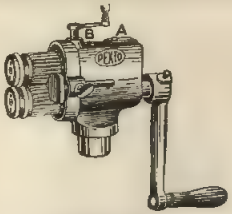
Interchangeable.

Capacity 20 Gauge Iron and Lighter.

For producing a neat, uniform crimp and bead or crimp without bead these machines recently made from new patterns will be found superior to any other make for general pipe crimping or beading. They have been designed with a view to giving maximum strength and rigidity and can be depended upon for producing snug fitting pipe joints that hold when put together. A very practical feature is offered in the arrangement of the driving gears. Two speeds are provided for; back geared for heavy stock and direct drive when lighter gauges of materials are used. The driving gears can be removed and the machine converted instantly into a direct acting crimper by attaching the crank to lower shaft. Connecting gears are of machine cut steel the frame and cap machined to insure perfect fit of all working parts for accurate and uniform work. Rolls are made of a high grade steel, scientifically hardened and the gauge is of extra wide proportions made from tool steel properly hardened. Adjustments are provided for regulating the relative depth of crimp and bead. The adjustment will be found in a wedge between the rear bearings. This wedge is adjusted by wing nuts in front and back of frame near handle end. The upper shaft can be tipped toward front or back as desired thus making a deep crimp and shallow bead or shallow crimp and deep bead. Face of rolls are flush with their arbors. When the blank rolls as furnished are placed behind the crimping rolls a plain crimper is procured. Furnished with No. 975 standard.

No. 535. Diameter of beading rolls 1 15/16 inches, diameter of crimping rolls, 1 13/16 inches, width of crimp rolls 1¾ inches, width of bead rolls 1 inch, size of ogee bead ½ inch, ratio of gearing 3 to 1, distance between shaft centers 1¾ inches. Shipping wt., approximately 65 lbs. Each **$35 00**

CRIMPING AND BEADING MACHINE.



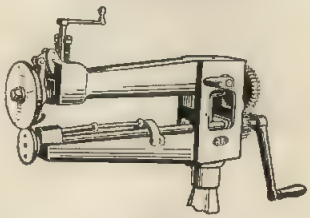
Common Sense.

Capacity, 24 Gauge Iron or Lighter.

A common-sense, direct-acting, crimping and beading machine recently made from new patterns. It fills a long-felt want for a compact, well-constructed, simple but durable machine that may be depended upon to perform with precision and accuracy for making a uniform crimp and bead or crimp only in pipe of black or galvanized iron. It has been designed for serving every requirement of the large or the small sheet metal shop and will prove an inexpensive, desirable addition to the stove pipe department of the hardware store. Beading and crimping rolls are countersunk and are held with round nuts which leaves the face of the rolls flush with the arbors. A pair of steel blank collars accompany each machine and when these collars are substituted for the beading rolls the same machine is converted into a plain cornice makers' crimper. Furnished complete with one pair of steel blank collars and offset bench standard.

No. 0581. Straight crimp; width of crimping rolls 1¾ inches, width of beading rolls 1 inch, diameter of beading rolls 1 15/16 inches, diameter of crimping rolls 1 13/16 inches, size of ogee bead ½ inch. Shipping wt., approximately 30 lbs. boxed ..... Each **$15 00**

DOUBLE SEAMER.



New Moore's.

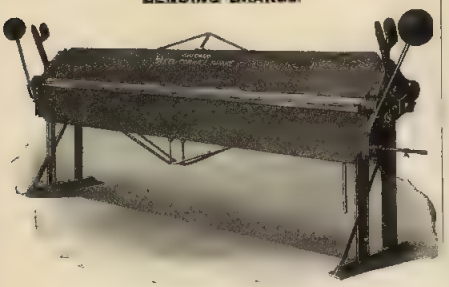
Capacity 26 Gauge Iron and Lighter.

These double seaming machines are adapted for general use. They are well suited to the wants of the trade who desire a machine for small work. Frame is solid casting. Arbors are heavy and gears cut from solid metal, the small wheel behind upper roll intended to hold seams from springing open until the seam is laid over sufficiently to close down hard is controlled through a lever. A slight turn of this lever controls small wheel and shifts upper roll to proper position.

No. 646. Will receive work 10 inches in depth. Size of lower seaming face, 2¾ inches. Shipping wt., approx. 60 lbs. boxed ..... Each **$65 00**

SHEET METAL WORKERS' MACHINES.

BENDING BRAKES.



Shipment from Factory Only.

Chicago Steel.

The construction is such that although the machines are strong and rigid they are light in weight. Steel is used throughout in their construction. The rated capacity is for mild steel sheets and for bending a flange of one inch or wider on sheets of full capacity. To secure additional leverage for bending heavy metal a steel angle extension is attached to the bending leaf. Full length sheets can be worked by one man; one end is clamped on the mark and the other end of the sheet can be moved to the desired mark without disturbing the first mark. The balance is perfect to make easy and rapid operation. Bending edges are made of special hard alloy steel to withstand wear. Adjustable stop gauge is furnished.

BENCH PLATES OR STAKE HOLDERS.

Cast Iron.

No. 982. Length, 30 inches; width 8 inches. Wt., 31 lbs. .....Each $9 00

TINNERS' STAKES.

HOLLOW MANDRELS.

Best Quality Cast Iron, Polished Finish.

No. 910. Entire length, 40 inches; length of flat part, 9 inches; width of flat part, 6 inches; length of oval part, 31 inches. Size of oval part radius of circle 2 inches. Shipping wt., 60 lbs. boxed .....Each $12 75

BLOW HORN STAKES.

Wrought Iron With Steel Faces.

No. 925. Length of large end, 9 inches; of small end, 18 inches; diameter of large end, at wide point, 4¾ inches; at narrow point, ½ inch; diameter of small end, at wide point, 1½ inches; at narrow point, ⅜ inches. Weight, 14 pounds. .....Each $13 50

BEAKHORN STAKES.

No. 901. Length of round end 16½ inches; flat end 21½ inches; width of flat end, tapers 2½x1⅞; diameter round end smallest point, ⅞; diameter round end, largest point 2½ inches. Wt., 46 lbs. .....Each $34 00

TINNERS' STAKES.

HATCHET STAKES.

Wrought Iron With Steel Face.

No. 943. Length of blade, 13 inches. Width of blade at center 2⅛ inches, width of blade at ends 1½ inches. Wt., 8½ lbs.....Each **$12 00**

CONDUCTOR STAKES.

Cast Iron With Polished Faces.

No. 971. Length large end, 15 inches; small end, 11½ inches; diameter large end, 2¼ inches; diameter small end, 1⅜ inches. Wt., 28 lbs...Each **$15 00**

DOUBLE SEAMING STAKES.

Wrought Iron With Steel Faces.

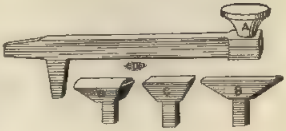
No. 921. Length of large end, 17 inches, small end 12 inches; size, each end 3x1¾ in. Wt. ea. 37 lbs..Each **$27 00**

SQUARE STAKES.

Wrought Iron With Steel Face.

No. 936. Common square. Size of face, 2¾x4½ in. Wt., 11 lbs..Each **$9 00**

DOUBLE SEAMING STAKES.



With Four Heads.

Cast Iron With Polished Faces.

No. 949. Size of heads: A, 6 inches diameter, 4¼ inches top of head to standard; B, 8½x2⅝x3⅛ inches, 2½ inches top of head to standard; C, 5½x4½ inches, 2½ inches top of head to standard; D, 5¾x4¼x3¾ inches, 2¾ inches top of head to standard. Wt., 110 lbs. .....Each **$21 50**

HAND DOLLY.

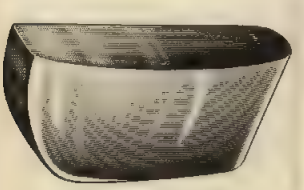
Made of high grade steel; machined and hardened faces. Invaluable for seaming and auto repair work; well balanced with snug fitting handle. Size of face, 5x5½ in.; thickness of head. 15/16 in.

No. 947. Wt., 8½ lbs.....Each **$7 50**

DOLLY BLOCKS.

Ground and Full Polished.

Without handles and patterned to fit the palm of the hand. Invaluable as a seaming iron for irregular sheet metal products and for reshaping and straightening auto bodies and fenders.

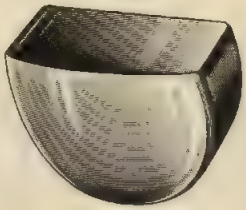


No. 916. Length, 4¾ inches; width, 2⅝ inches; thickness, 1 inch. Wt., 2¾ lbs. .....Each **$1 50**

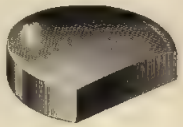
DOLLY BLOCKS.

Ground and Full Polished.

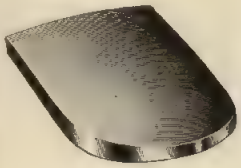
Without handles and patterned to fit the palm of the hand. Invaluable as a seaming iron for irregular sheet metal products and for reshaping and straightening auto bodies and fenders.



No. 915. Length, 2⅝ inches; width, 3¼ inches; thickness, 1½ inches. Wt. 2½ lbs. .....Each **$1 50**



No. 917. Length, 2½ inches; width, 2⅛ inches; thickness, ⅝ inches. Wt., ¾ lb. .....Each **$1 25**



Concave—Convex.

No. 918. Length, 3¾ inches; width, 2⅞ inches; thickness, ⅝ inch. Wt., 1 lb. .....Each **$1 25**

One in a box

BODY WORKERS' SPOONS.

Hand forged steel with polished face and black finish handle.

No. 1. Length, 9 inches. width, 2 inches. Wt. each, 1 lb.... Each **$1 25**

No. 2. Length, 10 inches; width, 1 inch. Wt. each, 9 ozs.....Each **$0 75**

No. 3. Length, 6 inches; width, 1 inch. Wt. each, 5 ozs.....Each **$0 65**

Each wrapped in paper.

STANLEY PLANES.

IRON.

Scrub.

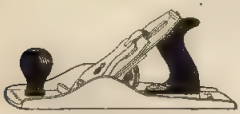
User can quickly plane down to a rough dimension any board that is too wide to conveniently rip with a hand saw, an operation that is sometimes called "hogging." This is made possible by reason of the peculiar shape of the extra heavy cutter, the cutting edge of which is rounded instead of square. Handles and knobs of beech.

No. 40. Length, 9½ inches; 1⅛ inch cutter; japanned. Wt. each, 2⅛ lbs. .....Each **$2 65**

ALUMINUM.

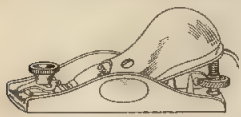
The planes are the regular Bailey type of bench planes having the same adjustable features as regards the frogs and cutters. The bottoms and frogs are made of aluminum instead of of gray iron, which provides an exceptionally light tool that will not rust.

No. A4 Smooth. 2 in. cutter; 9 ins. long. Wt. each, 2¼ lbs....Each **$6 00**



No. A5 Jack. 2 inch cutter; 14 inches long. Wt. each, 2⅝ lbs.....Each **$6 75**

No. A6 Fore. 2⅝ inch cutter; 18 inches long. Wt. each, 3½ lbs.....Each **$9 00**



No. A18 Block. 1⅝ inch cutter; 6 inches long. Wt. each, ⅞ lb., Each **$3 60**

All above, one in a box.

STANLEY PLANES.

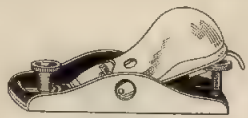
BAILEY.

STEEL.

These planes are the regular Stanley Bailey" type bench plane: have malleable iron frog and lever cap with steel base. Rosewood Knob and Handle.

No. S4—Smooth. 2 inch cutter; 9 inches long. Wt., 3 lbs....Each **$4 85**

No. S5—Jack. 2 inch cutter; 14 inches long. Wt., 3¾ lbs..Each **$5 55**



Block.

Similar to the regular No. 18 block plane; bottom and adjustable front are made of steel, making it practically indestructible. Knuckle joint.

No. S18. 1⅝ inch cutter; 6 inches long. Wt. each, 1¼ lbs.....Each **$2 50**

BLOCK PLANES.

BAILEY.

IRON.

Adjustable Throat; Cutter Adjustable Endwise and Sidewise.

No. 9½. Length 6 inches; cutter 1⅝ inches; japanned trimmings. Wt. each, 1½ lbs. .....Each **$2 45**

No. 15. Length 7 inches; cutter 1⅝ inches; japanned trimmings. Wt. each, 1⅝ lbs. .....Each **$2 75**

No. 16. Length 6 inches; cutter 1⅝ inches; nickel trimmings. Wt. each, 1½ lbs. .....Each **$2 80**

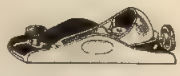
No. 17. Length 7 inches; cutter 1⅝ inches; nickel trimmings. Wt. each, 1⅝ lbs. .....Each **$3 10**

All above, one in a box.

BLOCK PLANES.

STANLEY.

IRON.



Low Angle.

Cutter adjustable endwise; cutter rests on its seat at an angle of only 12 degrees, permitting great ease in working across the grain on hard woods. They have adjustable throats which allow the opening or closing of the mouth as close or fine work may require.

No. 60. Length 6 inches; cutter 1⅝ inches; nickel trimmings. Wt. each, 1¼ lbs. .....Each **$2 85**

No. 60½. Length 6 inches; cutter 1⅝ inches; japanned trimmings. Wt. each, 1¼ lbs. .....Each **$2 60**

No. 65. Length 7 inches; cutter 1⅝ inches; nickel trimmings. Wt. each, 1⅝ lbs.....Each **$3 40**

Heavy Low Angle.

Especially adapted for use in cutting across the grain on heavy work, where more power is required than can be obtained by use of the ordinary block plane. Fitted with rosewood handle and knob, and designed to be operated with both hands. Adjustable throat.

No. 62. Length 14 inches; cutter 2 inches; japanned trimmings. Wt. each, 8⅝ lbs.....Each **$6 70**

BAILEY.

IRON.

Knuckle Joint.

Adjustable throat; cutter adjustable endwise and sidewise; cutter rests on its seat at an angle of 20°; the knuckle joint in the cap makes it a lever to clamp the cutter in its seat.

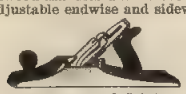
No. 18. Length, 6 inches; cutter, 1⅝ inches; nickel trimmings. Wt. each, 1½ lbs.....Each **$3 05**

All above, one in a box.

STANLEY IRON PLANES.

BED ROCK.

Rosewood Handles and Knobs. Cutters adjustable endwise and sidewise.



Jack, Fore and Jointer.

No. 605. Jack. Length 14 inches; cutter 2 inches. Wt. each, 4¾ lbs. .....Each $6 75

No. 606. Fore. Length 18 inches; cutter 2⅜ inches. Wt. each, 7⅛ lbs. .....Each $8 50

No. 607. Jointer. Length 22 inches; cutter 2⅜ inches. Wt. each 8¼ lbs. .....Each $9 80

No. 608. Jointer. Length 24 inches; cutter 2⅜ inches. Wt. each, 9¾ lbs. .....Each $11 60

With Corrugated Bottoms.

No. 605C. Jack. Length 14 inches; cutter 2 inches. Wt. each, 4¾ lbs. .....Each $7 25

No. 606C. Fore. Length 18 inches; cutter 2⅜ inches. Wt. each, 7⅛ lbs. .....Each $9 15

No. 607C. Jointer. Length 22 inches; cutter 2⅜ inches. Wt. each, 8¼ lbs. .....Each $10 55

No. 608C. Jointer. Length 24 inches; cutter 2⅜ inches. Wt. each, 9¾ lbs. .....Each $12 45

BAILEY.

Rosewood Handles and Knobs. Cutters adjustable endwise and sidewise.

The Bailey type differs from the Bed Rock principally in the construction of the frog, in that the Bed Rock type has more contact surface between the bed and frog, which means less vibration. The Bailey type, however, is better known and more generally used. All genuine Bailey planes have the name Bailey cast in the bottom, and the name Stanley stamped on the cutter.

Smooth.

No. 2. Length 7 inches; cutter 1⅝ inches. Wt. each, 2¼ lbs..Each $4 60

No. 3. Length 8 inches; cutter 1¾ inches. Wt. each, 3½ lbs..Each $4 80

No. 4. Length 9 inches; cutter 2 inches. Wt. each, 3¾ lbs..Each $5 25

No. 4½. Length 10 inches; cutter 2⅜ inches. Wt. each, 4¾ lbs..Each $6 05

Smooth.
With Corrugated Bottoms.

No. 3C. Length 8 inches; cutter 1¾ inches. Wt. each, 3½ lbs..Each $5 15

No. 4C. Length 9 inches; cutter 2 inches. Wt. each, 3¾ lbs..Each $5 60

No. 4½C. Length 10 inches; cutter 2⅜ inches. Wt. ea., 4¾ lbs.Each $6 50

All above, one in a box.

BAILEY.

Rosewood Handles and Knobs. Cutters adjustable endwise and sidewise.

Jack.

No. 5. Length 14 inches; cutter 2 inches. Wt. each, 4¾ lbs..Each $6 05

No. 5¼. Length 11½ inches; cutter 1¾ inches. Wt. ea., 3¾ lbs...Each $5 50

No. 5½. Length 15 inches; cutter 2¼ inches. Wt. each, 6¾ lbs.Each.$6 75

Jack.
With Corrugated Bottoms.

No. 5C. Length 14 inches; cutter 2 inches. Wt. each, 4¾ lbs...Each $6 50

Fore and Jointer.

No. 6. Fore. Length 18 inches; cutter 2⅜ inches. Wt. each, 7¾ lbs. .....Each $7 70

No. 7. Jointer. Length 22 inches; cutter 2⅜ inches. Wt. each, 8½ lbs. .....Each $8 80

No. 8. Jointer. Length 24 inches; cutter 2⅜ inches. Wt. each, 9¾ lbs. .....Each $10 50

Fore and Jointer.
With Corrugated Bottoms.

No. 6C. Fore. Length 18 inches; cutter 2⅜ inches. Wt. each, 7¾ lbs. .....Each $8 30

No. 7C. Jointer. Length 22 inches; cutter 2⅜ inches. Wt. each, 8½ lbs. .....Each $9 45

No. 8C. Jointer. Length 24 inches; cutter 2⅜ inches. Wt. each, 9¾ lbs. .....Each $11 30

STANLEY.

Carriage Makers' Rabbet.

No. 10½. Length 9 inches; cutter 2⅛ inches. Wt. each, 3 lbs...Each $6 35

No. 10. Length 13 inches; cutter 2⅛ inches. Wt. each, 4¼ lbs.Each $7 70

All above, one in a box.

STANLEY.

Carriage Makers' Rabbet.

Has tilting handle and knob so fitted to work close up to perpendicular sides. Has spurs on both sides for rabbeting across the grain.

No. 10¼. Length, 13 inches; cutter, 2⅛ in. Wt., 4¼ lbs.....Each $9 00

STANLEY WOOD PLANES.

BAILEY.

Bottom, handle, and knob made from well seasoned beech. Cutters are the regular Bailey type and are adjustable both endwise and sidewise. Frog is held in place by two machine screws which pass through the top fron and screw into two brass lugs. These lugs are screwed and securely pinned into the wood bottom.

Smooth.

No. 22. Length 8 inches; cutter 1¾ inches. Wt. each, 2½ lbs..Each $3 30

Handled Smooth.

No. 35. Length 9 inches; cutter 2 inches. Wt. each, 3¼ lbs..Each $4 05

Jack.

No. 26. Length 15 inches; cutter 2 inches. Wt. each, 3¾ lbs...Each $3 60

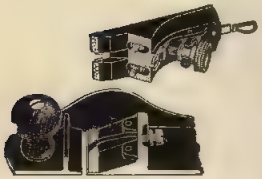
No. 27½. Length 15 inches; cutter 2¼ inches. Wt. ea., 4¾ lbs., Each $4 15

All above, one in a box.

STANLEY PLANE PARTS.

BAILEY. IRON.

Bailey Old Style.



Bailey New Style.

An improvement has been made in the Bailey Iron Plane which necessitated a change in the construction of the Bottom and Frog, thereby making it impossible to use the new style Frog in the old style Bottom, or the old style Frog in a new style Bottom.

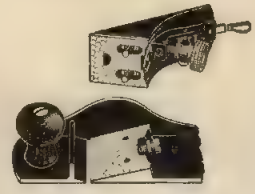
For a time an intermediate style was made having same frog and bottom as the latest design, except that there was no Frog adjusting screw, consequently no clip on the Frog.

The latest design Frog or Bottom will be furnished for both the intermediate and new style Planes. If your plane is of the intermediate pattern, remove the steel clip from the Frog and the parts will fit.

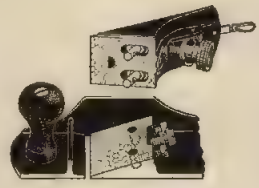
In order that we may fill your order correctly, kindly advise us which style Plane you have.

The difference in construction of the Frogs and Bottoms is very clearly shown in the illustrations above

BED ROCK.



Bed-Rock Old Style.



Bed-Rock New Style.

An improvement has been made in the Bed Rock Plane which necessitated a change in the construction of the Bottom and Frog, thereby making it impossible to use the new style Frog in an old style Bottom or the old style Frog in a new style Bottom.

In order that we may fill your order correctly kindly advise us which style Plane you have.

The difference in construction of the Frogs and Bottoms is very clearly shown in the illustrations above

PLANE PARTS

INTERCHANGEABLE.

In the following tables the numbers of Planes taking the same identical part are given on the same line or group, for instance—

A 1⅝ inch Single Iron is the same in 13 numbers of Planes, therefore an order for Single Plane Irons for a No. 9½ Plane would provide for any or all of the Planes shown in the same line or group, or

An order for Adjusting Nuts for No. 9½ Plane would provide for any of the planes in that line, viz., Nos. 9½, 9¾, 15 and 15½.

PART No. 1.

SINGLE PLANE IRONS.

For Bailey, Bed Rock and Stanley Iron Planes.

Used in Planes:

1¼ inch. No. 1 .....Each $0 45
1⅝ inch. Nos. 2, 602....Each $0 50
1¾ inch. Nos. 3, 3C, 5¼, 5¼C, 22, 603, 603C, 20, 113 .....Each $0 55
2 inch. Nos. 4, 4C, 5, 5C, 9, 24, 26, 35, 604, 604C, 605, 605C.....Each $0 60
2⅛ in. Nos. 10, 10¼, 10½.Each 65
2¼ inch. Nos. 5½, 5½C, 27½, 605½, 605½C .....Each $0 70
2⅜ inch. Nos. 4½, 4½C, 6, 6C, 7, 7C, 11, 28, 31, 36, 52, 604½, 604½C, 606, 606C, 607, 607C .....Each $0 75
2⅝ inch. Nos. 8, 8C, 32, 608, 608C .....Each $0 80

For "Gage" Iron and Wood Planes.

Used in Planes:

1¾ in. Nos. G3, G3C, G22.Each $0 55
2 in. Nos. G4, G4C, G5, G5C, G26, G35, G36 .....Each $0 60
2¼ in. Nos. G6, G6C, G28, G30. Ea 70
2½ in. Nos. G7, G7C .....Each 80

For "Bailey" and Stanley Block Planes.

Used in Planes:

1 in. Nos. 100, 101 .....Each $0 13
1⅜ in. Nos. 60, 60½, 61, 203.Each 42
1⅜ in. No. 102.....Each 21
1⅜ in. No. 103 .....Each 21
1⅝ in. Nos. 9½, 9¾, 15, 15½, 16, 17, 18, 19, 63, 65, 65½, 131, 220.Each $0 42
1⅝ in. Nos. 110, 130.....Each 32
1⅝ in. No. 120 .....Each 42
1¾ in. No. 140 .....Each 50

PART No. 1A.

DOUBLE PLANE IRONS.

For Bailey, Bed Rock and Stanley Iron Planes.

Used in Planes:

1¼ in. No. 1.....Each $0 80
1⅝ in. Nos. 2, 2C, 602.....Each 85
1¾ in. Nos. 3, 3C, 5¼, 5¼C, 603, 603C .....Each $0 90
1¾ in. No. 113.....Each 90
1¾ in. No. 20 .....Each 90
2 in. Nos. 4, 4C, 5, 5C, 604, 604C, 605, 605C .....Each $0 95
2 in. No. 9 .....Each 95
2⅛ in. No. 10, 10¼, 10½...Each 1 00
2¼ in. Nos. 5½, 5½C, 605½, 605½C .....Each $1 10
2⅜ in. Nos. 4½, 4½C, 6, 6C, 7, 7C, 604½, 604½C, 606, 606C, 607, 607C, 52 .....Each $1 20
2⅝ in. No. 11.....Each 1 20
2⅝ in. Nos. 8, 8C, 608, 608C.Each 1 30

STANLEY PLANE PARTS.

PART No. 1A (Continued).
DOUBLE PLANE IRONS.
For "Bailey" Wood Planes.

Used in Planes:

1¾ in. No. 22.....Each $0 90
2 in. Nos. 24, 26, 35.....Each 95
2¼ in. No. 27½ .....Each 1 10
2⅜ in. No. 28, 31, 36.....Each 1 20
2⅝ in. No. 32.....Each 1 30

PART No. 2.
CAP IRONS.
For "Bailey" and Bed Rock Iron Planes.

Used in Planes:

1¼ in. No. 1.....Each $0 35
1⅝ in. Nos. 2, 2C, 602....Each 35
1⅝ in. Nos. 3, 3C, 5¼, 5¼C, 608, 608C .....Each $0 35
1¾ in. No. 113 .....Each 35
1¾ in. No. 20.....Each 35
2 in. Nos. 4, 4C, 5, 5C, 604, 604C, 605, 605C .....Each 35
2 in. No. 9 .....Each 35
2⅛ in. 10, 10¼, 10½.....Each 35
2¼ in. Nos. 5½, 5½C, 605½, 605½C .....Each 40
2⅝ in. Nos. 4½, 4½C, 6, 6C, 7, 7C, 604½, 604½C, 606, 606C, 607, 607C .....Each $0 45
2⅜ in. No. 11.....Each 45
2⅝ in. Nos. 8, 8C, 608, 608C.Each 50

For Bailey Wood Planes.

Used in Planes:

1¾ in. No. 22 .....Each $0 35
2 in. No. 24, 26, 35.....Each 35
2¼ in. No. 27½ .....Each 40
2⅜ in. Nos. 28, 31, 36.....Each 45
2⅝ in. No. 32 .....Each 50

PART No. 3.
CAP SCREWS.
For Planes:

No. 1 .....Each $0 10
Nos. 2, 2C, 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C .....Each $0 10
Nos. 602, 603, 603C, 604, 604C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C..Each $0 10
Nos. 22, 24, 26, 27½, 28, 31, 32, 35, 36 .....Each $0 10

PART No. 4.
LEVER CAPS.
For Planes:

No. 1 .....Each $0 50
Nos. 2, 2C, 602.....Each 50
Nos. 3, 3C, 5¼, 5¼C, 603, 603C.Each 50
Nos. 4, 4C, 5, 5C, 604, 604C, 605, 605C .....Each 50
Nos. 4½, 4½C, 6, 6C, 7, 7C, 604½, 604½C, 606, 606C, 607, 607C.Each $0 50
Nos. 5½, 5½C, 605½, 605½C. Each 50
Nos. 8, 8C, 608, 608C.....Each 50
No. 22 .....Each 50
Nos. 24, 26, 35.....Each 50
No. 27½ .....Each 50
Nos. 28, 31, 36.....Each 50
No. 32 .....Each 50
Nos. 9½, 9¾, 15, 15½, 65½.Each 20
Nos. 16, 17, 63.....Each 30
Nos. 18, 19, 65.....Each 40
Nos. 60, 61.....Each 30
No. 60½ .....Each 30
No. 62 .....Each 30
Nos. 100, 101.....Each 10
Nos. 102, 103 .....Each 20
Nos. 110, 120, 130.....Each 20
Nos. 131, 220 .....Each 20
No. 140 .....Each 30
No. 203 .....Each 20

PART No. 5.
LEVER CAP SCREWS.
For Planes:

No. 1 .....Each $0 10
Nos. 2, 2C, 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C .....Each $0 10
Nos. 602, 603, 603C, 604, 604C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C..Each $0 10
Nos. 22, 24, 26, 27½, 28, 31, 32, 35, 36 .....Each $0 10
Nos. 9½, 9¾, 15, 15½, 16, 17, 62, 131, 220 .....Each $0 10
Nos. 18, 19 .....Each 10
Nos. 60, 60½, 61, 63, 65½..Each 10
No 65 .....Each 10
No. 140 .....Each 10
No. 203 .....Each 10

PART No. 6.
FROGS COMPLETE.
For Planes:

No 1 .....Each $0 70
Nos. 2, 2C .....Each 70
Nos. 3, 3C, 5¼, 5¼C.....Each 70
Nos. 4, 4C, 5, 5C.....Each 70
Nos. 4½, 4½C, 6, 6C, 7, 7C..Each 70
Nos. 5½, 5½C .....Each 70
Nos. 8, 8C .....Each 70
No 602 .....Each 1 00
Nos. 603, 603C .....Each 1 00
Nos. 604, 604C, 605, 605C..Each 1 00
Nos. 604½, 604½C, 606, 606C, 607, 607C .....Each $1 00
Nos. 605½, 605½C .....Each 1 00
Nos. 608, 608C .....Each 1 00
No. 22 .....Each 60
Nos. 24, 26, 35.....Each 60
No. 27½ .....Each 60
Nos. 28, 31, 36.....Each 60
No. 32 .....Each 60
Nos. 60, 60½, 61, 63, 65, 65½..Each 20
No. 62 .....Each 20
Nos. 103, 120 .....Each 30
No. 131 .....Each 30
No. 140 .....Each 20
Nos. 203, 220 .....Each 20

PART No. 7.
ADJUSTING LEVERS.
For Planes:

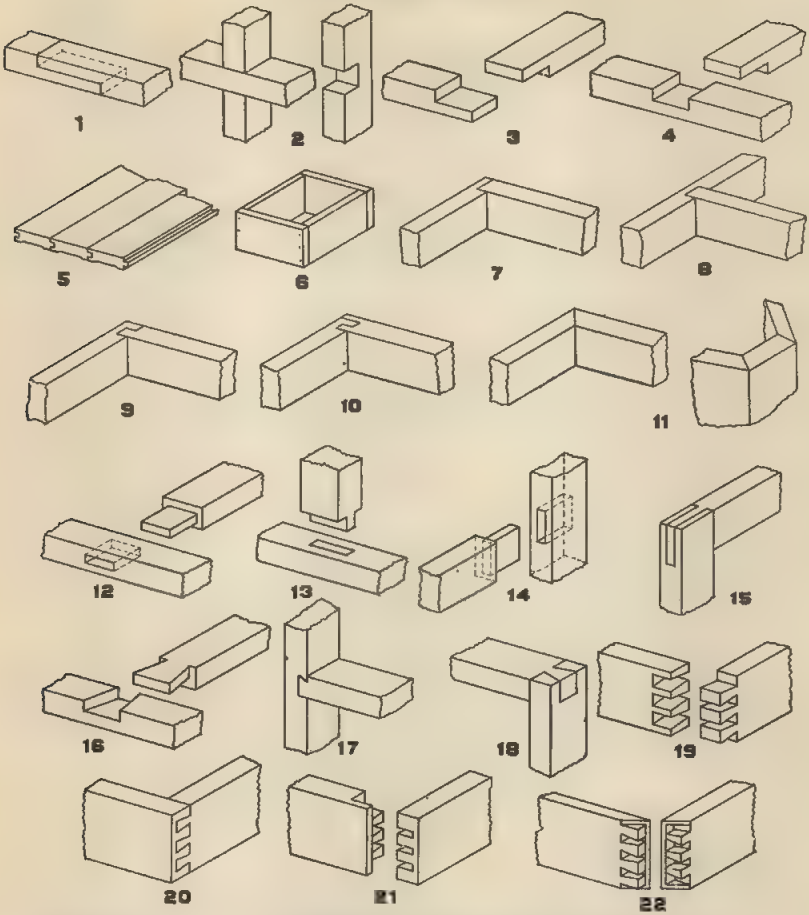
No 1 .....Each $0 10
Nos. 2, 2C, 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C, 602, 603, 603C, 604, 604C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C..Each $0 10
Nos. 22, 24, 26, 27½, 28, 31, 32, 35, 36 .....Each $0 10
Nos. 9½, 9¾, 15, 15½, 16, 17, 18, 19 .....Each $0 10

PART No. 8.
ADJUSTING NUTS.
For Planes:

No 1 .....Each $0 20
Nos. 2, 2C, 602.....Each 20
Nos 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C .....Each $0 20
Nos. 603, 603C, 604, 604C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C..Each $0 20
Nos. 22, 24, 26, 27½, 28, 31, 32, 35, 36 .....Each $0 20
Nos. 9½, 9¾, 15, 15½.....Each 20
Nos. 16, 17, 18, 19.....Each 20
Nos. 60, 65, 61, 63.....Each 20
Nos. 60½, 65½ .....Each 20
No. 62 .....Each 20
No. 131 .....Each 20
Nos. 140, 220 .....Each 20
No. 203 .....Each 20

COMMON WOOD JOINTS.

MADE WITH STANLEY TOOLS.



1—Half Lap Joint.
2—Cross Lap Joint.
3—End Lap Joint.
4—Middle Lap Joint.
5—Tongue Groove Joint.
6—Butt Joint.
7—Rabbet Joint.
8—Dado Joint.
9—Dado and Rabbet Joint.
10—Dado Tongue and Rabbet Joint.
11—Mitre Joint.
12—Thru Mortise Tenon.
13—Stub Mortise Tenon.
14—Blind Mortise Tenon.
15—Open Mortise Tenon.
16—Lap Dovetail.
17—Dovetail Dado.
18—Thru Single Dovetail.
19—Thru Multiple Dovetail.
20—Lap Dovetail or Half Blind Dovetail.
21—Stopped Lap Dovetail.
22—Blind Mitre or Secret Dovetail.

BLOCK PLANES.

STANLEY.

Not Adjustable.

No. 101. Length, 3½ inches; cutter, 1 inch. Wt. each, ¼ lb.....Each **$0 50**

Not Adjustable.

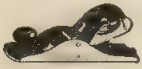
No. 100. Length, 3½ inches; cutter, 1 inch; handled. Wt. each, ⅜ lb. .....Each **$0 60**

Not Adjustable.

No. 102. Length, 5½ inches; cutter, 1⅝ inches. Wt. each, ⅞ lb. Each **$0 90**

Lever Adjustment.

No. 103. Length, 5½ inches; cutter 1⅝ inches. Wt. each, ⅞ lb. Each **$1 30**



Not Adjustable.

No. 110. Length, 7 inches; cutter 1⅝ inches. Wt. ea., 1⅝ lbs. Each **$1 25**

Adjustable.

No. 220. Length, 7 inches; cutter, 1⅝ inches. Wt. ea., 1½ lbs. Each **$1 85**

Double Ender. Not Adjustable.

Has two slots and two cutter seats. By reversing the position of the cutter and the clamping wedge it can be used to plane up into corners and other places difficult to reach with other planes.

No. 130. Length, 8 inches; cutter, 1⅝ inches. Wt. each, 1⅝ lbs. .Each **$1 85**

All above, one in a box.

BLOCK PLANES.

STANLEY.

Double Ender. Adjustable.

Has two slots and a movable cutter seat. When it is desired to use it as a bull-nose plane, cap and cutter can be removed and adjustable cutter seat reversed as indicated in cut. Rosewood Knob

No. 131. Length, 8 inches; cutter, 1⅝ inches. Wt. each, 1½ lbs. .Each **$3 00**

CIRCULAR PLANES.

STANLEY.

Has flexible steel face which can be accurately adjusted for planing the inside or outside of circles. The cutter is adjustable endwise and sidewise. The face is fastened at its center to the plane body, and adjusted at the end by means of a screw and levers. A valuable feature is the graduated scale for setting the face.

No. 113. Japanned; length, 10 inches; cutter, 1¾ inches. Wt. each, 3½ lbs. .....Each **$8 85**

RABBET AND BLOCK PLANES

STANLEY.

Detachable Side.

Easily changed from a block plane to a rabbet plane, or vice versa; cutter is adjustable endwise and set on a skew. Japanned trimmings, rosewood knob.

No. 140. Length, 7 inches; cutter, 1¾ inches. Wt. each, 1⅞ lbs. .Each **$3 20**

All above, one in a box.

BULL NOSE RABBET PLANES.

STANLEY.

Very useful for working close up into corners or other difficult places. Adjustable mouth.

No. 75. Length, 4 inches; cutter. 1 inch; japanned trimmings. Wt. each, ⅝ lb. .....Each **$0 90**

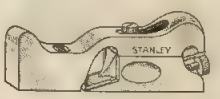
CABINET MAKERS' RABBET PLANES.

STANLEY.

Bull Nose.

Designed for fine cabinet work where extreme accuracy is desired; the sides and bottom being square with each other, the plane will be perfectly flat on either side, and can be used right or left; both the cutter and width of throat opening are adjustable.

No. 90. Adjustable; length, 4 inches; cutter, 1 inch; nickel plated. Wt. each, 1 lb. .....Each **$4 75**



Nickel Plated.

Will lie perfectly flat on either side, and can be worked either right or left; adjustable throat; cutter adjustable endwise; removing the front makes a chisel plane.

No. 92. Length, 5½ inches; cutter, ¾ in. Wt. each, 1½ lbs. .Each **$4 75**

No. 93. Length, 6½ inches; cutter, 1 inch. Wt. each, 1¾ lbs. .Each **$5 75**

All above, one in a box.

STANLEY PLANE PARTS.

PART No. 9.
LATERAL ADJUSTING LEVER.

For Planes:

Nos. 2, 2C, 602, 22, 24.....Each $0 20

Nos. 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C, 603, 603C, 604, 604C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C, 26, 27½, 28, 31, 32, 35, 36 .....Each 20

Nos. 9¼, 9¾, 15, 15½, 16, 17, 18, 19 .....Each $0 20

PART No. 10.
FROG SCREWS.

For Planes:

No. 1 .....Each $0 10
No 2, 2C .....Each 10

Nos. 3, 3C, 4, 4C, 4½, 4½C, 5, 5C, 5¼, 5¼C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C .....Each $0 10

FROG SCREW AND BUSHING.

For Planes:

Nos. 22, 24, 26, 27½, 28, 31, 32, 35, 36 .....Each $0 20

PART No. 11.
HANDLES.

For Planes:

No. 1 .....Each $0 40

Nos. 2, 2C, 602.....Each 40

Nos. 3, 3C, 603, 603C, 4, 4C, 5¼, 5¼C, 604, 604C .....Each $0 40

Nos. 4½, 4½C, 5, 5C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C .....Each $0 40

Nos. 26, 27, 27½, 28, 31, 32.Each 20

Nos. 35, 36 .....Each 20

Nos. 9¾, 15½ .....Each 50

No. 62 .....Each 60

PART No. 12.
KNOBS.

For Planes:

No. 1 .....Each $0 30

Nos. 2, 2C, 602 .....Each 30

Nos. 3, 3C, 4, 4C, 5¼, 5¼C, 603, 603C, 604, 604C .....Each $0 30

Nos. 4½, 4½C, 5, 5C, 604½, 604½C, 605, 605C .....Each $0 30

Nos. 5½, 5½C, 6, 6C, 7, 7C, 8, 8C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C .....Each $0 30

Nos. 22, 24, 35, 26, 27½, 28, 31, 32, 36 .....Each $0 20

Nos. 110, 120, 130 .....Each 20

Nos. 131, 140, 220, 63, 203, 61.Each 30

PART No. 13.
HANDLE BOLTS AND NUTS.

For Planes:

No 1 .....Each $0 20

Nos. 2, 2C, 602.....Each 20

Nos. 3, 3C, 4, 4C, 5¼, 5¼C, 603, 603C, 604, 604C, 26, 27½, 28, 31, 32.Each 20

Nos. 4½, 4½C, 5, 5C, 5½, 5½C, 6, 6C, 7, 7C, 8, 8C, 604½, 604½C, 605, 605C, 605½, 605½C, 606, 606C, 607, 607C, 608, 608C .....Each $0 20

HOUSEHOLD TOOLS.

STANLEY 4 SQUARE.

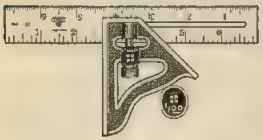
HOUSEHOLD SLIM TAPER FILE.

6 inch single cut; each file fitted into dull black handle, ready for use. Wt. doz., 2 lbs.

Household Slim Taper File, Dozen $2 40

Six in a box.

HOUSEHOLD TRY AND MITRE SQUARE.



Blade nickel plated, can be firmly locked at any point; edges machined and squared inside and out; graduated in 8ths and 16ths; iron handle, dull black; 7 in. blade; 2⅝ in. handle. Wt. doz., 6 lbs.

Household Try and Mitre Square .....Dozen $12 00

One in a box

HOUSEHOLD LEVEL.

Selected hardwood, carefully seasoned; 2⅝x1⅛ in. stock, 18 in. long; proved glasses, non-adjustable; dull black handy grip. Wt. doz., 16½ lbs.

Household Level .....Dozen $15 00

One in a box.

HOUSEHOLD PUTTY KNIFE.

Dull black, hardwood handle; crucible steel blade 1⅜ in. wide, 3¾ in. long; half elastic. Wt. doz., 1½ lbs.

Household Putty Knife ...Dozen $3 00

One in an envelope, 6 envelopes in a box.

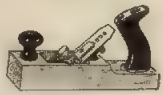
PLANES.

STANLEY-GAGE.

SELF-SETTING.

This line is now made by the Stanley Rule and Level Plant. The Self-Setting feature lies in the fact that the plane iron when taken out to be sharpened will fit in the same position as before, likewise the plane cap. The plane cap is the same in iron or wood planes. The upper part is cast iron and has a steel bottom fastened to it by screws. The steel bottom may be adjusted before the screws are set up; when the parts are all assembled in the plane the cap so fits the cutting iron as to make it either a single or double plane iron for various kinds of work.

WOOD.



Smooth.

No G35. 10 inches long; 2 inch cutter. Wt. each, 3 lbs .....Each $4 50

IRON.

Smooth.

No. G3. 8¾ inches long, 1¾ inch cutter. Wt. each, 2¾ lbs. ....Each $5 15

No. G4. 9 inches long, 2 inch cutter. Wt. each, 3 lbs.....Each $5 60

Smooth.
With Corrugated Bottom.

No. G3C. 8¾ inches long; 1¾ inch cutter. Wt. each, 2¾ lbs..Each $5 55

No. G4C. 9 inches long; 2 in. cutter. Wt. each, 3 lbs.....Each $6 00

Jack.

No. G5. 15 inches long; 2 inch cutter. Wt. each, 4½ lbs.....Each $6 40

Jack.
With Corrugated Bottom.

No. G5C. 15 inches long; 2 in. cutter. Wt. each, 4½ lbs., ...Each $6 90

All above, one in a box.

PLANES.

TINNERS' TOOLS.

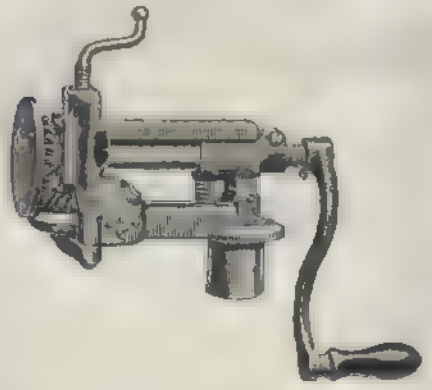
SETTING DOWN MACHINES

These machines follow the burring machines and press the edge of the bottom on to the flange of cans and similar work

Superior Possesses the advantage that the operator can start the seam inward while setting it down, thereby facilitating the operation of double seaming. The work can be held up or down



Niagara.

	Net each
*Niagara, for seams $\frac{3}{16}$ to $\frac{5}{16}$ in. wide, with stand, weight 28 lbs each	Market Price

Superior.

	Net each
Superior, for seams $\frac{1}{8}$ to $\frac{3}{16}$ in. wide, with stand, weight 38 lbs each	$57.40

For a high grade metal ware line, nothing excels the Atlantic. This we distribute for our territory.

IMPROVED MACHINE STANDARDS.

They can be used on any bench from 1 to 3 in. thick. The necessity of cutting holes in the bench is obviated, and the tinner is enabled to use a machine in any part of his shop most convenient to his work. The wrench is always attached to the standard.

	Net each
*Small—Diameter of hole $1\frac{1}{8}$ in., weight 11 lbs	Market Price
*Heavy Diameter of hole $2\frac{5}{8}$ in., weight 21 lbs	Market Price

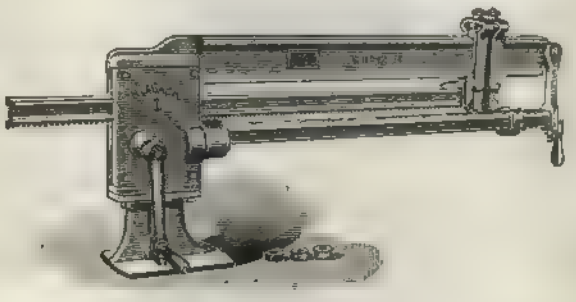
GROOVERS.



Nos. 220, 230 and 236½

Capacity No. 24 Iron and Lighter.

The reversible horn of this machine permits of grooving 2 inches diameter and larger. By using the flat rolls and pressing the seam into one of the grooves placed into the horn, the seam can be grooved towards the inside of the work.

Niagara groover is arranged for grooving and flattening the seam while the rack with rolls moves over the work once and returns to its original position. The grooving roll is in action on the way forward, and the flattening roll on the return trip, the change taking place automatically. In this manner the work and strain on the machine are divided, without loss of time. A stop is provided, on the horn.

Price includes two flat and three grooved rolls, with grooves 5-32, ¾, and ½-inch wide, width of grooves in round horn—5-32, ¾, ⅜, ½-inch.

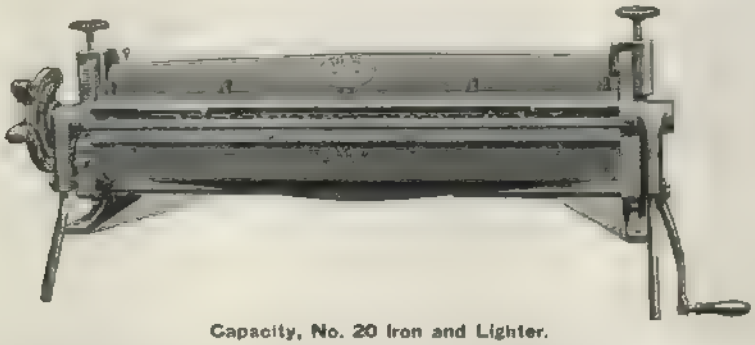
NIAGARA UNIVERSAL FOLDER AND BRAKE.



Capacity, No. 20 iron and Lighter.

This machine combines the advantages of an ordinary Folder with those of a Cornice Brake.

Clamping bar has a parallel motion up and down of 1 inch, and when in the lower position gives a firm grip upon the material. The two screws on top of the frames are used to fix the lower position of the clamping bar when more or less space is needed for the material or forming bars. The largest space obtainable between the clamping bar, (when in the upper position) and the bed is three inches.

The swinging folding bar is adjustable up and down to permit of making round as well as sharp bends. It is made of solid steel, the upper edge being $\frac{3}{8}$ of an inch wide, so that small members can be formed For ordinary work an angle-shaped bar is attached, which increases the width of 1 in.

Folding blade around which the material is bent is fastened by means of screws, and it can easily be removed to permit of substituting others of different profile.

Back gauge is adjustable from $\frac{1}{2}$ to 10 inches, and it can be removed entirely The rods that carry the gauge are graduated in sixteenth inches.

Adjustable stops. On the one end of the Folder there is a segment shaped casting carrying adjustable stops to regulate the angle of the bend. The stops can be thrown instantly in and out of position.

Front gauge adjustable for locks from $\frac{1}{2}$ to $\frac{3}{4}$ inch wide can be provided at extra cost.

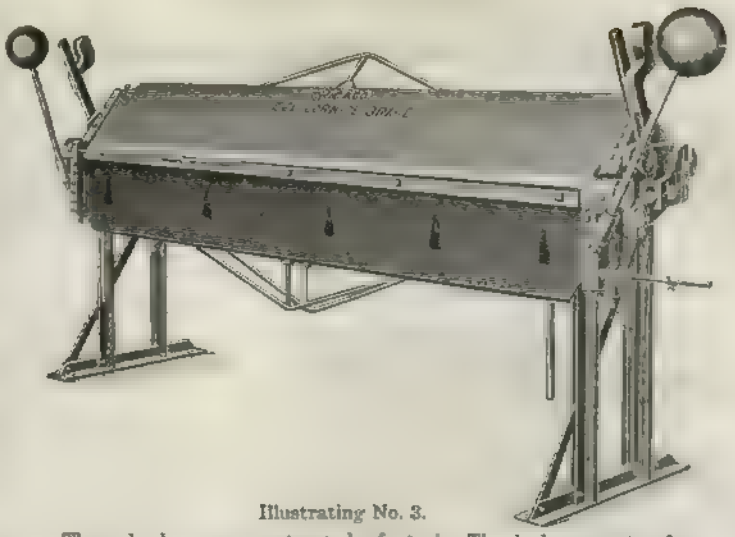
CORNICE BRAKES.



Illustrating No. 3.

These brakes are constructed of steel. The body consists of a patented arrangement of steel plates, and other parts where strength is required are made of steel castings. They will not warp or spring. They are unexcelled for rapid and accurate bending and are exceptionally strong and durable.

The principal features are: steel construction, one man operation, provisions on both ends to accommodate already bent flanges, wide opening of jaws, simple adjustment of clamping pressure and for sharp or rounding bends, improved stop gauge, angle bar for heavy bending, and apron edge which allows making as close as ⅛ inch reverse bends on light material

All cornice brakes are furnished with five formers for moulding work, stop gauge, angle bar for heavy bending and wrench fitting all adjustable parts.

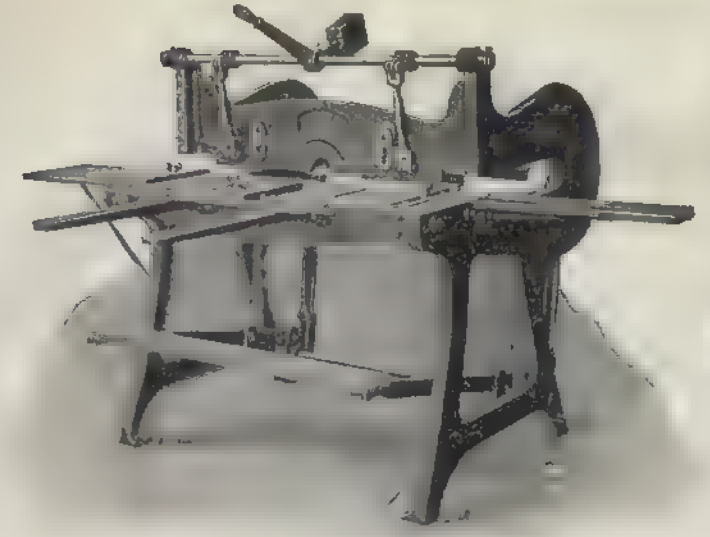
TINNERS' MACHINES.

FOOT GAP SHEARS.



"NIAGARA."

For No. 16 Iron and Lighter.

The gap arms formerly used to connect the cutter bar to the treadle rods are abandoned in the new construction thereby reducing the weight that must be moved [illegible] A series of compound levers, pivoted on the housings connects the cutter bar with the treadle rods.

The housings are made with a throat 18 inches deep to permit of cutting sheets of any length as far from the edge as the gap allows it. The actual cutting length is about 1 inch more than the nominal size, and the housings are far enough apart that sheets [illegible] equal to the cutting length can be passed through from front to back without [illegible]

The [illegible] bars are made of steel and are extensible, to permit of regulating the length [illegible] to the thickness of metal to be cut.

[illegible] are covered [illegible] front, back bevel and side gauges and [illegible] There is a stop gauge at the right hand end [illegible] of which [illegible] cuts can be gauged from the cutting line [illegible] The back gauge has a micrometer device for close adjustment.

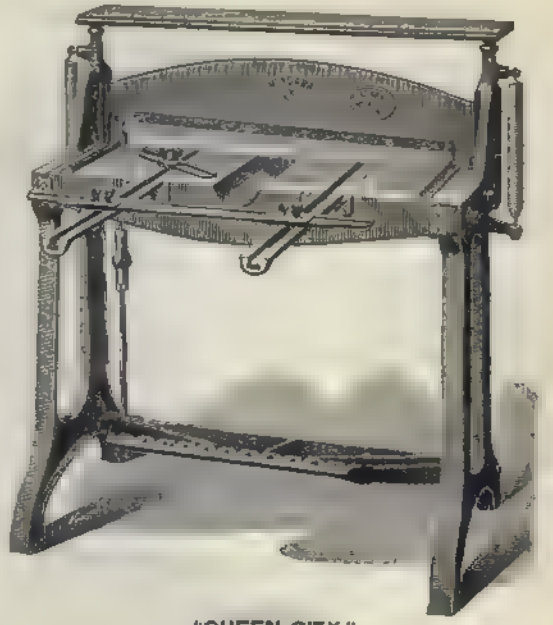
SQUARING SHEARS.



"QUEEN CITY."

For No. 18 Iron and Lighter.

The Queen City Shears are in appearance similar to the "Excelsior," but being heavier and stronger than these and other tinners' shears, they will cut thicker material.

Side legs and guides for cutter bar are in one piece
Provision is made to compensate for the wear of the knives and guides
The knives are made of the best materials and ground perfectly true
Graduated scale is marked on bed

On shears 36 inches and longer it is advisable to use a hold-down attachment in front of the cutter bar, to insure a straight cut.

The price includes a set of front, back bevel and side gauges. The Micrometer Back Gauge is furnished.

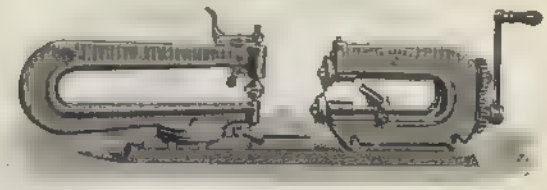
NIAGARA WAUGH'S CIRCLE SHEARS.



The shears will cut round blanks of sheet metal, and they can also be used for straight cutting. The cutters are always set ready for use. The circle arm can be quickly moved to any desired position and fastened there. There is a scale marked on the bed, according to which the circle to be cut. The material is clamped between the disks by means of a quick acting eccentric lever, which always exerts the same pressure. Adjustment is provided for wear of the cutters, and we furnish a slitting gauge and one drop gauge, to give the proper position of the blank between the disks.

LEVER PUNCHES.

NIAGARA

The plunger is operated by a powerful toggle movement. All parts are made of malleable iron and steel, in order to combine strength with the least possible weight. Back and side gauges are provided.

Depth of throat, 1⅝ inches; distance from center of slide to face ¼ inches.

Will punch ½ inch hole through No. 18 iron.

Three punches and one die for holes ⅜, 7/16 and ½ inch diameter are sent along.

	Net each
NO. 2N*—Weight 8 lbs. ..... List each $.	Market Price

WHITNEY.

Exclusive Features—All parts Drop Forged, insuring uniformity, and freedom from blow holes and defects.

Construction—A modern departure from the ordinary type of hand punches—operating upon two extra case hardened roller surface bearings, assisted by two sets of cogs, the combination forms the **most powerful leverage** ever applied to hand metal working tools, producing the maximum capacity with the minimum exertion.

Symetrically proportioned. Strongly reinforced where greatest strain comes.

Quick Adaptability to Work—Punches instantly changed, as lower cut shows, by throwing back upper lever, and raising intermediate, into which punch head is inserted. No tools required. No nuts or bolts to remove.

Only Portable Hand Punch with this advantageous feature. Dies easily changed and adjusted.

Capacity, 7/16 in. hole through ½ in. iron, punches up to ⅝ in. hole in lighter metal.

Two extra punches and one die with each punch.

CLAYTON & LAMBERT

No. 208

Double Blunt Needle Torch for Gasoline or Kerosene.

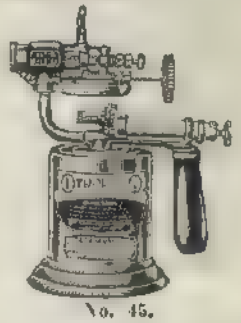
The most powerful quart torch ever produced. Works perfectly in wind and weather far below zero. Burner with super-heating chamber, made of special bronze generator metal. Lower needle is the shut-off which regulates and controls the flame. Top needle is the cleaner only. Impossible to enlarge orifice. Tank made of heavy gauge seamless drawn brass, reinforced and has concaved brass bottom. Equipped with automatic brass pump with double spring check valve. Burner has cast hook and support for soldering copper.

Net each

NO. 208—Capacity 1 quart, weight 5¼ lbs. $11.40

ONE IN A BOX

TURNER MASTER LINE.



No. 45.

The one opening in tank on top above the fuel line obviates leaks from soldered brackets, etc. The Automatic Safety Valve and air release prevent pumping excess or bursting pressure. Baffle and Heater Plug gasify either today's gasoline or kerosene to a hot dry gas gas effecting more heat on lower fuel consumption. Air adjusting tube for various gravity fuels. Adjusting needle and shut-off needle separate entirely prevent the enlarging of the orifice (so common an occurrence on single needle blow torches) which makes the burner useless. The Pistol Grip Handle allows for any size hand. The above are exclusive Turner improvements. Its superiority in heat units, quick generation and safety account for its being America's most popular selling blow torch.

Net Each

NO. 45—1 quart capacity. Heavy gauge brass body; weight each, 5 lbs.....$11.42

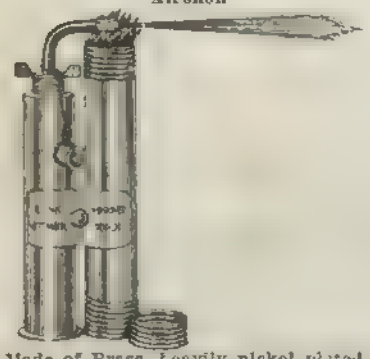
Alcohol.



Made of Brass, heavily nickel plated. Inexpensive and simple to operate. No pumping or priming. A clean, intensive flame in thirty seconds. Remove cap off bottom of the one tube and saturate the wick with denatured alcohol, remove the top cap off the one tube and light it, then turn the neck of the other tube into the flame, when the tube gets hot down to the body, gas forms and flame shoots out of hole in tube. An ideal torch for electrical and radio work. Net Sach

GASOLINE FIRE POTS.

The Greatest General Utility Fire Pot Made.

The No. 1 improved double blunt needle fire pot is 12½ inches high, 9¾ inches in diameter at base, 6¾ inches in diameter at top and the tank holds seven pints. It is adapted to a greater variety of uses than any other make of fire pot on the market.

The tank is made of heavy drawn sheet steel, tinned inside and out (rust proof), (thoroughly braced), because the strength and durability of this metal enables the tank to withstand harder usage and last longer than if made of brass or any other material, and it is more easily replaced or repaired when worn out or damaged.

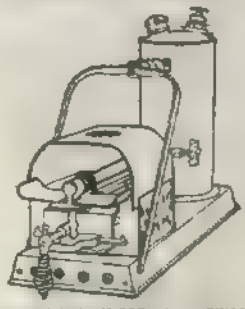
The burner (at the expense of only half the gasoline required in other makes), represents the highest development in generating power and heat efficiency, quickly producing an ideal blue flame entirely free from smoke, easily regulated, giving satisfactory results under all reasonable conditions, including windy or cold weather. The burner is attached to a swivel joint, which permits moving the flame up or down, and being located outside the hood does not become clogged or eaten out by drippings. The burner is fitted with clean-out plugs, thus being easily kept clean.

Net each

NO. AM1—Capacity 8 pints, weight 14 lbs. **$20.76**

ONE IN A BOX.

GASOLINE FURNACE.



IMPROVED "GEM" NO. 8, WITH PUMP.

The new improvements made in this furnace make it possible to use the poor grade of gasoline now being marketed with satisfaction. The Improved Drip Cup has three times greater heating surface and gasoline capacity. Its generation is secured in one-half to two-thirds the time of the former cup. The new drawn seamless steel generator pipe has a spiral core which causes the gasoline to travel 75 per cent farther. The cast iron burner has been slotted to further increase the heat on the generator pipe, giving maximum generation. A slight change in construction of the furnace allows it to use 25 per cent more air, giving a greater range of heat, generation and economy of gasoline. Size 20x7x15 inches high.

Net Sach

NO. AM8—Gem with copper reservoir and pump. Weight each, crated, 22½ lbs. **$32.00**

GASOLINE FIRE POTS.

For Tinners.

The No. 80 Improved Double Blunt Needle Fire Pot is noiseless, smokeless and odorless Has subflame for the generator which permits the heating flame to be turned low when not in use. Burner has double heating surfaces producing intensely hot blue flames, which burn from each side to the center. Will heat a pair of 12-lb. coppers quickly while melting a pot of metal. Tank is made of drawn steel, tinned inside and out to prevent rust. No. 80 is the hottest fire pot made. It is wind proof and not affected by extreme cold.

Net Each

NO. 80—Capacity 1 gallon; weight 16¼ lbs. each **$21.66**

ONE IN A BOX

IMPROVED COIL FIRE POTS.

For Gasoline.

The No. 23 Fire Pot is the latest improved, up-to-date Coil Fire Pot, made with seamless drawn steel tank, tinned inside and out (rust proof), large funnel and dust-proof filler plug, heavy uprights, large valve, cushion protection hand at base of tank and heavy malleable top plate. Patented three-piece coil cup and top plate enables the user to remove the top section by unscrewing three large nuts exposing the burner and coil. There are no coil cup lugs or small nuts to burn off. Air pressure is produced by means of an automatic brass pump. It is fitted with Tinners shield, which is of sheet steel, quickly heating a pair of large size soldering coppers. The shield is removable, thus making the fire pot excellently adapted to melting metals and various other work. The remarkable efficiency and especially low price of No. 23 Fire Pot recommends its use to those who have formerly used charcoal fires.

CIRCUMFERENCE RULES.

The Circumference Rule is a very useful tool for obtaining circumferences of circles by simply measuring the diameters. As shown in the cut, the top edge is graduated with sixteenths of inches. The bottom edge with what, for convenience is called "circumference inches," divided into eights. The divisions of this edge, compared with the opposite edge, bear the same ratio inversely to each other as the diameter of a circle to its circumference. Therefore, opposite the first inch on top edge is read on the lower edge 3 and the fraction representing 0.1416 inches. Its use will readily be appreciated by tinners and other sheet-metal workers, for whom it is particularly adapted.

The reverse side gives the following useful table of measurement

Liquid Measure—Flaring	¼ pint to 5 gallons
Dry Measure—Flaring	¼ bushel to 2 bushels
Dry Measure—Straight	1 quart to 3 bushels
Cans—Pitched Top	2 gallons to 10 gallons
Cans—Flat Top	1 gallon to 200 gallons

	Net Each

LAWN MOWER PARTS

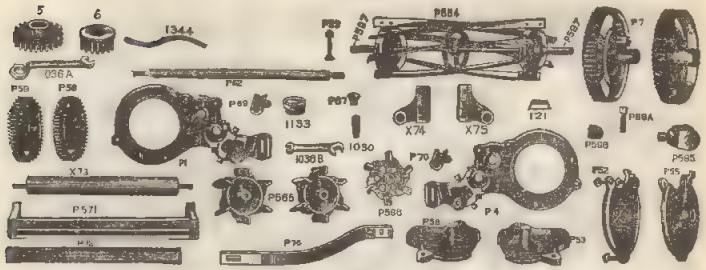
PENNSYLVANIA GOLF LOW WHEEL LAWN MOWER

SIX KNIVES



Sizes, 14, 16 and 18 Inches

Note. Parts numbered Five Hundred up (P551, P554, etc.) fit machines supplied from 1908 to 1912 inc. For **Earlier** mowers parts P51, P54, etc., must be ordered.

To avoid errors, always mention number on side plates and wheels when ordering any parts.

DIRECTIONS FOR ORDERING

The right or left side of a lawn mower is determined by standing in back of the machine, as when in use.
Give number, with description of parts. Where possible, the number is cast on the part, otherwise refer to the illustrations.
Always give name of machine and width of cut. The size is stamped on the lower bar to which the knife is attached

If you have no open account with us, cash must accompany the order. If the parts can be mailed include mailing charges, or they will be sent by express, charges collect.

LAWN MOWER PARTS

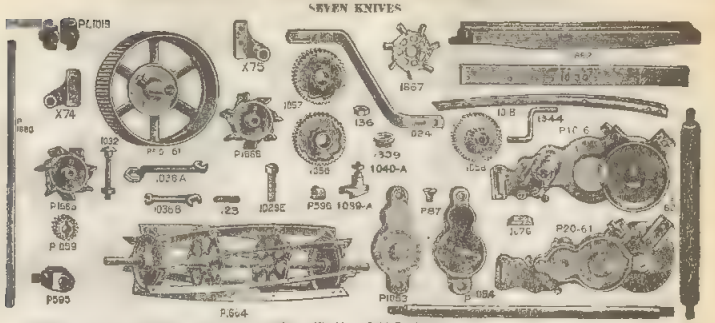
PENNSYLVANIA GOLF HIGH WHEEL, PLAIN BEARING

SEVEN KNIVES



Sizes, 17, 19 and 21 Inches

Note. Parts numbered Sixteen Hundred up (1601, 1602, etc.) fit machines supplied 1908, 1909 and 1910. For EARLIER mowers the numbers are One Thousand up, e. g., part 1601 for a mower supplied in 1907 or earlier must be ordered as 1601. On 1911 and 1912 pattern mowers the same part would be P1651.

To avoid errors, always mention number on side plates and wheels when ordering any parts.

DIRECTIONS FOR ORDERING

The right or left side of a lawn mower is determined by standing in back of the machine, as when in use. Give number, with description of parts. Where possible, the number is cast on the part, otherwise refer to the illustrations. Always give name of machine and width of cut. The size is stamped on the lower bar to which the knife is attached

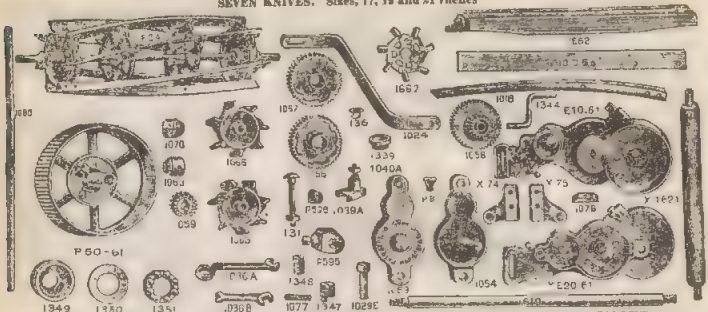
LAWN MOWER PARTS

PENNSYLVANIA GOLF HIGH WHEEL, BALL BEARING

SEVEN KNIVES. Sizes, 17, 19 and 21 Inches



Note.—Parts numbered Sixteen Hundred up (1651, 1652, etc.) fit machines supplied 1906 to 1912. For EARLIER mowers the numbers are One Thousand up, e. g., part 1651 for a mower supplied in 1907 or earlier must be ordered as 1651.

To avoid errors, always mention number on side plates and wheels when ordering any parts.

DIRECTIONS FOR ORDERING

The right or left side of a lawn mower is determined by standing in back of the machine, as when in use. Give number with description of parts. Where possible the number is cast on the part, otherwise refer to the illustrations. Always give name of machine and width of cut. The size is stamped on the lower bar to which the knife is attached.

No	Article	Shipping Weight	Each
E19-61	Left Hand Side Plate	5½ pounds	$3 50

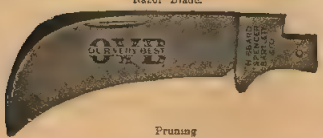
Wharncliffe.

Carpenters or Saw.

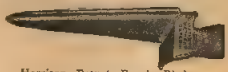
Razor Blade.



Pruning.

Pen Blade.

File Blade.



Harrison Patent Punch Blade.

Coru

Eraser

Screw Driver.

Spatula.

Timber Scribe.

Cotton Sampler.

We do not carry pocket knife blades in stock. The illustrations shown on this page being reproductions of the different styles used in H.S.B. & CO. pocket knives. Slight variations are made to adapt them to the different knives of which they form a part. All are made from Wardlow's Celebrated English crucible steel. Each blade is forged in the most approved manner by expert workmen. Great care is taken to avoid overheating the metal the forging being done at a very low heat, thereby condensing the metal and making it extremely tough. The tempering is done by a new method which insures a uniform and lasting edge. All blades bearing the H.S.B. & CO. trademark are carefully ground and finished. The shank is carefully shaped and finished. Every blade is inspected, whetted to a fine cutting edge and warranted to be free from flaws and neither too hard or too soft.

In material, workmanship and design, the H.S.B. & CO. pocket knife blades are equal, if not superior to any made in this or any other country. They are and always have been the product of an American factory which has in its employ cutlers who have served thirty, forty and fifty years in their service.

ETCHING CUTLERY

Etching Department.

STYLES OF ETCHING

The very best way of increasing trade in pocket cutlery is through the dealer's advertisement on the large blade of his best knives. If this is done wisely, it establishes a reputation for all knives bearing the dealer's name, adding his reputation to that of the maker, and thus is a convincing argument to the quality of the article. The consumer is sure of a double guaranty, and if the brand is unknown, he at least knows that the dealer would not have his name on inferior goods. It is also a strong safeguard against theft. Several times every year we hear of stolen goods recovered which had been etched by us, the name on the blade identifying the knives and establishing evidence to convict the thieves. Numbers of our customers have informed us that they have been robbed, the thieves leaving the etched knives untouched.

Our etching department, beginning in 1896 in a very modest way, has grown to an important adjunct to our cutlery business. Our etchers have become artists in their work, having every appliance necessary or desirable to produce fine results.

Etching has become popular, and the public is quick to notice the enterprise of a dealer who has something new to offer.

We make no charge whatever for this work, feeling that we are amply repaid by the increased business the dealer is sure to give us in consequence of adding to the selling quality of his knives. Our only requirements are that a sufficient—not a large—quantity is ordered each time to warrant it, and that the goods are such that we as a firm would care to affix our guaranty.

We shall be glad to explain more fully through our representatives or by letter our position in this matter and show samples of the work.

POCKET KNIVES

Hibbard POCKET KNIVES

FULLY GUARANTEED TO GIVE PERFECT SATISFACTION

Made by American workmen Blades are finest quality Crucible Steel, TEMPERED BY A NEW METHOD WHICH INSURES A UNIFORM AND LASTING EDGE. Sharpened, ready for use. In whetting, hold at an angle of 18 degrees, on an OIL STONE, not a grindstone.

WE ETCH YOUR NAME, FREE OF CHARGE, ON THESE KNIVES WHEN REQUESTED.

A Phenomenal Pocket Knife Bargain Genuine American Made Premium Stock Knives.

Note Extremely Low Prices. Excellent Values. Hibbard Finest Quality. Unconditionally Warranted.

We offer this wonderful assortment of American PREMIUM STOCK FARMERS' KNIVES at a very low price. They are ideal knives for farmers, stock and cattle men and also dandy knives for the mechanic and all-around handy man.

The coming of THE SEASON for calves, pigs, lambs and colts, brings the demand for these knives—timely items for your cutlery stock, which should be PUSHED NOW. The farmer, stockman, sheepman and veterinary are your prime market for Speying, Docking and Marking Knives.

MADE IN AMERICA—ALL BLADES STAMPED WITH OUR FIRM NAME

HIBBARD, SPENCER, BARTLETT & CO.

Can be retailed at $1.75 each and Give Every Merchant a Fat Profit. OUR EXTREMELY LOW PRICE HAS PRE-WAR PRICES BEATEN.

The blades are made of the finest Wardlow's English Crucible Pocket Knife Steel, tempered, ground and whetted to a sharp and lasting edge. Nickel silver bolsters and shield, brass linings.

These knives measure about 4 inches over all when the blades are closed. Have one large serviceable clip point blade, the front side of which is crocus or mirror polished.

Also one standard size sheep toe or tobacco blade and one APPROVED PATTERN standard size and popular speying blade for stock raisers' or farmers' particular use. All blades handsomely finished and insides of knives nicely cleaned and polished.

The inside and outer linings of these knives are made of extra heavy gauge highly polished AMERICAN brass.

No. C2903P—Hibbard ASSORTMENT consists of one dozen Premium Stock Knives assorted as follows: 2 with Iridescent Blue Pearl Shell handles, 2 with Dapple Gray Iridescent Silver Pearl Shell handles, 2 with Mottled Green Turquoise Pearl Shell handles, 6 with highly-finished American stag handles; put up in a handsome partitioned display box; Silk Velvet lined .....per assortment $23.35

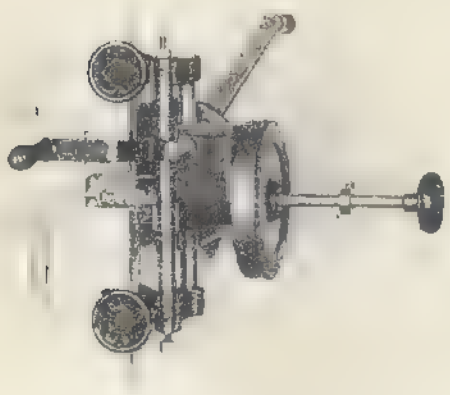
LOCK MORTISERS

ALTA HAND



Cuts An Ordinary Mortise in Five Minutes

A hand-driven machine with gear reduction and fly wheel to give ample power with very little effort on part of the operator.

It is equipped with self-centering jaws with wood faces.

This machine cuts up and down the entire face, not a series of holes.

Cuts entire mortise, including face-plate, without being taken from the door.

Substantially built to give long satisfactory service for the contractor who feels his work does not justify purchase of the motor-driven machine.

Every machine is guaranteed to do the work as represented and warranted against defective materials for one year.

	Each
No. 1A—With 2 Cutters, Weight Each 31 Lbs.	$75.00

Note—Cutters ⅝ to 1¼ inches, by 16ths inches are carried in stock for the above Machine State Sizes desired when ordering.

ALTA ELECTRIC

Cuts An Ordinary Mortise in Less Than a Minute.

Aluminum Frame, Light in Weight and Rust-Proof, 110 Volt Universal Motor operated from any light socket.

The cutter shaft is mounted on ball bearings.

It is equipped with self-centering jaws with wood faces.

Cuts up and down the entire face—not a series of holes. It cuts the entire mortise, including face plate, without being taken from the door.

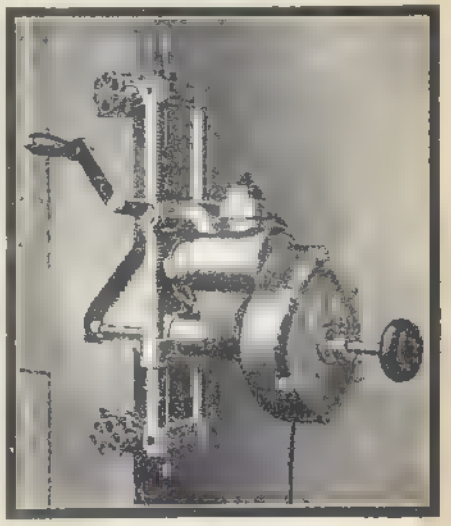
They are simple, durable and accurate.

Every machine is guaranteed to do the work as represented and warranted against defective materials for one year.

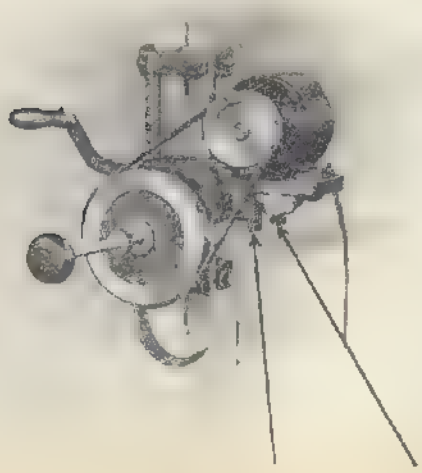
	Each
Model C—With 2 Cutters, Weight Each 35 Lbs.	$125 00

Note—Cutters ⅝ to 1¼ inches by 16ths inches, are carried in stock for the above machine, state Sizes desired when ordering.

These Mortisers are built to stand severe service, that is why they are considered good tools.



ALTA COMBINATION



Motor or Hand Driven.

A light weight, portable, one-man machine, can be carried as easily as an electric drill. Sturdy and compact in design, with few working parts. Consider the convenience of this little electric tool that can be carried in one hand from door to door and from floor to floor.

It is quickly converted from Motor Drive to Hand Drive by removing belt guard, slipping belt off fly-wheel and removing screw (S) and four motor plate screws. Motor remains bolted to motor plate. This machine will cut the entire mortise, including face-plate, without being taken off the door. The machine is self-centering on the door. It will cut a ⅞ inch mortise in a 1 inch door without splitting the sides. Equipped with Adjustable Stop, Hardened Machine Cut Gears, enclosed and running in oil, Belt Guard, Fly Wheel and Rest Guard, Adjustable Collar which controls depth of mortise and 10 ft. Cord with Attachment Plug

It is also furnished with Attachment for Hand Drive.

	Each
No. AC—With 2 Cutters. Complete with ⅓ H. P. Motor, Weight 45 Lbs.	$125 00

Note—Cutters ⅝ to 1¼ inches by 16ths inches are carried in stock for the above machine, state Sizes desired when ordering.

The Line Beautiful

American Children's Vehicles

Parkcycles
Automobiles
Velocipedes
Coaster Wagons
Express Wagons
Scooters
Pedal Bikes
Hand Cars
Tricycles
Doll Cabs

"Known Around the World"

"The Line Beautiful" is no mere catch phrase. Since their inception American Children's Vehicles have been famous for their beauty.

Whether it's an automobile, a scooter, a coaster wagon, a parkcycle, a velocipede or any children's vehicle, Americans are always easily distinguishable by this quality of beauty.

Children are beauty loving. They are keen for harmonious colors and lines, for their visions and hearts have not yet been distorted with ugliness of any kind. Stock and push the complete line of American Vehicles and know for yourself why it is the biggest selling line in the world.

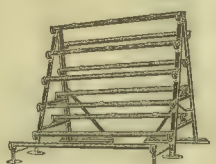
LINOLEUM DISPLAY RACKS

"BEST"



Built entirely of metal; all parts are steel except the roller-bearing brackets and clamps on the steel roller tubes, which are gray iron castings.

The clamps on the steel roller tubes catch the linoleum in several places, holding it smoothly, so that it rolls onto the tubes straight. Tubes are supported by roller bearing brackets, permitting the linoleum to be easily rolled and unrolled. The roller tubes may be securely locked to prevent the linoleum unrolling.

Included with each rack is an auxiliary tube from which the linoleum is rolled onto the rack so that it does not have to be lifted on. The crank is well designed and made of iron with a wood grip.

PETITE Baby Dolls

Happy Tot
A PETITE BABY

The Baby You Can't Resist

The lovable dimpled laughing baby that captures all hearts, holding in its chubby fist an unbreakable bottle with milk fluid and a real rubber nipple, ONE of the many interesting items in the "PETITE" doll lines.

Made in the larger sizes with the bottle and without the bottle, with lovely dimpled baby hands.

When "Lindy" marched up Fifth Avenue, this "Lucky Aviator Kid" was there to greet him. It met with extraordinary success. Perfect from goggles to boots, in every detail—it "sold out" in a few days. We show it here merely to illustrate the fact that "Petite" dolls are always timely—always carried out to the finest point of perfection.

"American Flyer"

ELECTRICAL AND MECHANICAL TRAINS, TRANSFORMERS AND ACCESSORIES

Each

N74610—**A new brilliantly red** colored 21-inch train with a powerful locomotive equipped with protected headlight and nickel-plated pantagraph. Has 8 pieces curved track, making an 88 inch circle, 6¾ inches long; coaches 6¾ inches long each. Completely packed in a single carton. Price 7.76

Each

N74614—**The Jeffersonian.** The entire 40-inch long train is finished in a beautiful Thistle Green. Locomotive is 9⅝ inches long and has automatic track reverse, protected headlight and neatly proportioned pantagraphs, hand rails and brass journal boxes. All cars are 9⅝ inches long each, and are equipped with four wheel trucks and brass vestibule steps. The Observation and Pullman Cars have one interior electric light each. Track consists of eight pieces curved and eight pieces straight, two reverse clips and the necessary binding clips forming a 182 inch oval. Completely packed in a single carton.....$1.88

American Flyer Trains are exact replicas of famous crack trains. Beautiful in color and design. Marvelous in mechanical precision.

Each

N74611—**"The Interstate Limited."** An attractive 3-car train, 24 inches long. Electrical Locomotive, with recessed protected headlight, 8 inches long. Single truck cars are 6½ inches long, the baggage car having sliding doors. Track equipment consists of eight pieces curved and two pieces straight track forming an oval 102 inches in circumference. Complete train, securely packed in a single carton 3.36

Each

N74613—**The Oriental Limited.** Locomotive has brass journal boxes. Pullman Car and observation car each have an interior electric light. Cars have double four wheel trucks and are 6⅝ inches long. Has eight pieces curved, four pieces straight track and two reverse clips, forming a 122 inch oval 4.70

Each

N74615—**The Bluebird.** A very complete outfit, train, tunnel, station, semaphore, etc. Its completeness is certain to please any youngster and do much toward showing him the possibility of building a real railroad. The entire train is in blue. The train equipment consists of locomotive, 9½ inches long, equipped with brass journal boxes, recessed type protected headlight, nickel plated hand rails bell and pantagraph. Cars have double trucks and are 6½ inches long. Passenger and Observation Cars have one interior electric light each. Track consists of eight pieces curved and six pieces straight, forming a 148 inch oval. Price..... 6.66

WIDE GAUGE ELECTRICS

47 inches long

American Flyer Wide Gauge Electric Trains are more than just miniature trains. They are designed and modeled from up-to-date drawings furnished by the Pullman Company and leading railroads. They embody features far in advance of those brought into early trains and are easily the outstanding class offering of the year.

61 inches long

Each

N74615—**The Eagle.** A new train, generously proportioned, well constructed, yet moderately priced. The color is green with red and black trimmings. It is 47 inches long. Locomotive is 13¼ inches long, and equipped with manual reverse, nickel-plated headlight, pantagraph, bell and hand rails. Nameplates are brass. Cars are 14½ inches long, and have one interior electric light each, while the observation car has an additional light in the platform dome, and polished brass platform railing. Cars are mounted on the famous American Flyer high speed 3 point suspension trucks. Track consists of eight pieces curved and two pieces straight forming a 180 inch oval. Packed in a single carton.. $8.66

Each

N74616—**The Commander.** Finished in a brilliant orange. It is 61 inches long, locomotive is 13¼ inches long, equipped with manual reverse and nickel-plated protected headlight, bell, pantagraph and hand rails. Name plates, journal boxes and air tanks are of polished brass. Cars are 14½ inches long, and have one interior electric light each, while the Observation Car has an additional light in the platform dome, and polished brass platform railing. Cars are mounted on famous American Flyer high speed three point suspension trucks. Track consists of eight pieces curved and four pieces straight forming a 184-inch oval. Completely packed in a single carton 37.80

TRIPLE ACTION REMOTE CONTROL

6 feet long

These two trains, "The Chief" and "The American Legion Limited" are equipped with the American Flyer Triple Action Remote Control, a most sensational innovation to the miniature train field. It not only reverses the train from one direction to another anywhere along the track but will also stop and again continue in a forward direction without first reversing.

62 inches long

Each

N74617—**"The Chief."** The four-wheel locomotive is 13½ inches long and is fitted with Twin Reversible Headlights, large pantagraphs, bell hand rails and ladders, all finished in polished nickel. Name plates, air tanks and journal boxes are of brass. Mail Car features sliding doors, vestibule diaphragms and two interior electric lights. Also Automatic Mail Bag Catcher and Bag. Pullman Car features swinging vestibule doors that close automatically, vestibule diaphragm and three interior lights. Observation Car features polished brass platform railing, illuminated platform train sign platform dome light with red rear and green side lights, and has two additional interior electric lights. All cars are 19½ inches long, and are fitted with automatic couplers, that are really automatic, and are mounted on American Flyer high speed three point suspension trucks. They are equipped with brass journal boxes, brass vestibule steps and black Japan air tanks and battery boxes. The entire train is finished in a rich Imperial Buff with other harmonious lithographic colors. Complete, packed in a single carton, with eight pieces curved and eight pieces straight track, and the necessary fittings to make a 29 ft. oval $3.00

Each

N74693—**"The American Legion Limited."** Really, a beautifully decorated train, and one of our most outstanding train sets for anything near the price. Triple Action Remote Control is 15 inches long, and is equipped with the famous American Flyer Twin Reversible Polished Nickel-plated head lights, large pantagraph, bell and hand rails. Journal boxes and air tanks are brass. Cars are lithographed in red with harmonious color decorations, and are 16 inches long. They are equipped with automatic couplers, brass vestibule steps and brass journal boxes. Baggage car and Pullman car have two interior electric lights while the observation car has one in the interior, one in the platform canopy that illuminates the red rear and green side lights and one in the train sign, making nine electric lights included in the set. The entire set, including eight pieces curved track, and six pieces straight with the necessary binding wire to make a 210 inch oval, is packed in a single carton..... 49.00

SLIDING DOORS IN ALL BAGGAGE CARS

Longer Running

American Flyer Mechanical Trains—"Standard of Comparison since 1907"—offer you this year an even greater profit outlook than in years gone by! When we say compare the merchandise of last year we actually invite comparison of the 1927 merchandise with that of 1926.

Do you buy by catalog number or specifications? When you buy American Flyer merchandise by number we guarantee to deliver exactly what you expect to receive, and oftentimes more. For instance, our No. 2 Mechanical Train this year is priced to retail at $2.60, and it is worth every penny. It is the same train as was designated by No. 2 during 1926, plus improvements.

You, of course, want to handle a reliable line made by a company whose position in the industry will insure you a continued source of supply of merchandise of known quality in the years to come.

The 1927 mechanical motors are especially worthy of note—easy-winding, stronger, longer-running. Wider springs, steel gears and pinions, friction disc clutch, and a winding key that Screws On or Off, preventing the danger of breakage if wound in the wrong direction or losing key.

This 20th Anniversary line fully carries out the American Flyer ideal of a concentrated, fast selling line for dealers: a line representing the very extreme in turn-over and profit—a complete line, yet one free from slow movers.

The Six Million Satisfied Owners of American Flyer equipment are destined to grow tremendously in 1927. Arrange NOW to get your share of this business. A few representative mechanical trains are pictured here. Ask your jobber to show you the full American Flyer line of mechanical and electrical trains.

American Flyer's 20th Anniversary Four-Color Catalog is now READY. Write for your copy.

ELECTRIC FANS.

"CENTURY.

The ability of Century Fans to Keep Running has been the governing factor in their construction.

Their design and construction is such that when viewed from the standpoint of appearance, efficiency and the amount of air moved and the speed control, they will prove highly satisfactory to all interested in fans

The fact that all portable fan motors are fully enclosed insures satisfactory operation in dusty places and even under the most extreme climatic variations of temperature and humidity encountered in tropical countries.

Each part is constructed of the best material adapted to the particular requirement, and is interchangeable through its having been made to fit standard jigs and gauges

A record is kept of the performance of each fan while being tested, after a substantial period of operation, to determine that it meets the performance limits we have established as standard.

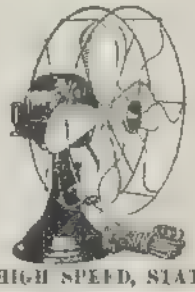
"WAGNER."

For Silent, Stimulating Breezes.

A buzzing fan irritates your heat-worried nerves, but a silent Wagner Fan soothes them by quietly stirring up a stimulating flow of live air. You'll need keen ears to hear it running. The blades slice through the air smoothly at a nicely calculated angle and force out a breeze that reaches 12 per cent further than other leading makes of fans. No noisy batting of air. Hum, buzz and vibration are almost entirely eliminated from the finely built Wagner Quality motor that drives this fan



SILENT, HIGH SPEED, STATIONARY.

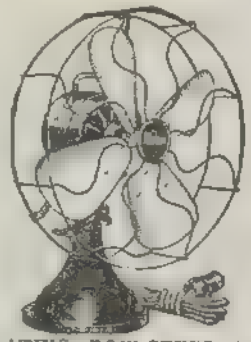
All Wagner Fans Are Four Blade.

"WAGNER."

The Wagner slow speed fan has grown out of the demand for an absolutely silent fan that will thoroughly and positively provide proper and efficient ventilation. The slower R. P. M. of the fan reduces the so-called blast of air and on that account is practically noiseless in its operation.



OSCILLATING—LOW SPEED, 3-SPEED CONTROL.

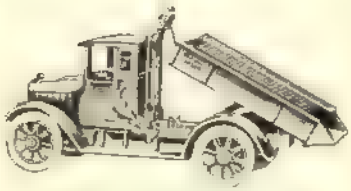
ARCADE TOYS

"They Look Real"

TOY McCORMICK-DEERING THRESHER

TOY 46 YELLOW CAB



RED BABY TRUCK (Dump Body)

TOY BUICK SEDAN

Sturdy cast iron toys, so designed and finished that they look like the real thing—is it any wonder Arcade Toys are popular with the children? With a final coat of bright glistening enamel, these toys represent to the children, real playthings out of their every day world. Miniatures of cars, trucks, busses, tractors and many other items with which they are well acquainted. Arcade Toys bring hours and hours of fun to the kiddies"—no clock work to get out of order and sturdy enough to stand the hardest knocks.

Arcade Toys represent year round profits to you. Ever increasing in popularity, you will find these worth while toys producing a constant income. Young America must play—rainy days, sunny days, indoors and out, you will find Arcade Toys in action everywhere.

Dealers are finding that Arcade Toys have shot full of holes the old tradition that Christmas is the only season for playthings. Children aren't being kept in a band box any more. Not much! Certainly not while there are Arcade Toys around the house to keep them busy in wholesome instructive play. Stock Arcade Toys for your own profit. You will find these toys to [illegible] quicker turnover and larger profits for you.

ARROWHEAD GASCONADE MODEL

Mahogany gunnels and decks built with half ribs only.

Selected cedar ribs and planking, covered with water-proof duck. Made with a wide flat bottom and at the same time has a comparative narrow appearance along the gunwhales, this being accomplished by the use of the tumblehome or incurve of the ribs, above the water line. The stems are well curved and set off the smooth sweep of the open gunwhales and the 30 inch mahogany arrowhead decks.

CANOES

ARROWHEAD—MEROCO SPEEDSTER

Mahogany Finish.

Selected cedar plankings and half ribs, all exposed metal parts are of brass; covered with special tightly woven canvas, treated with pure white lead preparation, built up to a smooth surface and finished with high grade colors and spar varnish. Very light in construction, weight eliminated without taking away the necessary strength and stability. The sponson or air chambers run the full length of canoe and are so scientifically built into the sides that added strength is given and motor vibration eliminated. Each

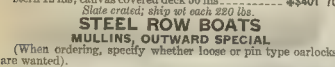
No. 1MS-17—Length 17 ft; width outside amidships 41 ins; depth bow 22 ins; depth amidship 16 ins; depth stern 12 ins; canvas covered deck 50 ins ..... **+$401 70**

Slate crated; ship wt each 220 lbs.

STEEL ROW BOATS

MULLINS, OUTWARD SPECIAL

(When ordering, specify whether loose or pin type oarlocks are wanted).



Designed and especially constructed for the application of detachable row boat motors. Equipped with bottom boards, rowing braces, one pair oarlocks, tying rings at bow and stern air-tight compartments, especially constructed and reinforced transom for attaching outboard motors and one pair 7½ ft. straight ash oars. Each

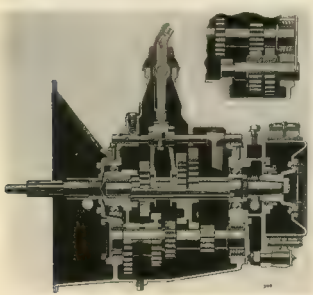
Dodge Introduces Refined Line of Graham Trucks

WHAT may be practically characterized as a complete new line of trucks is now in production at the Graham Brothers plant of Dodge Brothers. As previously, the models range from ¾ to 2 tons in capacity. Four-wheel brakes, four-speed transmissions, and a six-cylinder engine feature the 2-ton model, four-wheel brakes and four-speed transmission also being used on the 1½-ton models. Cam and lever steering gears are now standard on all chassis.

Changes made in the line have materially



The 1½ and 2-ton models use the four-speed transmission as shown here

bettered the performance while the same reliability is maintained through the use of stronger parts, where necessitated by increased stresses. The comfort of the driver has also received attention in redesigning cabs. Prices, however, remain virtually unchanged, with the exception of an increase of $150 on the 2-ton, with its six-cylinder engine, four-speed transmission and four-wheel brakes, and $10 on the 1-ton, the latter occasioned through the adoption of eight-ply instead of six-ply 30 by 5 tires. Three distinct 2-ton chassis models are being offered, consisting of a 137-in. and 162-in. model, and a 114-in. wheelbase roadbuilder, the latter being an entirely new model.

One hundred thirty-seven-inch and 162-in. editions are also available on the 1½-ton chassis, while the ¾-ton and 1-ton models are on 116 and 126-in. wheelbases respectively. These models are all fitted with the improved four-cylinder Dodge Brothers engine recently adopted in Graham Brothers trucks. Two-wheel brakes and three-speed transmissions are continued on the two smaller models without change.

The new six-cylinder engine used in the 2-ton model is the same as that used in the Dodge Senior passenger car line, except for slight changes in the manifold, carburetor setting, etc. A governor, however, is added, designed according to Graham Brothers engineers, not so much to reduce maximum speed of the trucks as to insure against excessive racing of engines without load. A larger truck type fan is also incorporated.

Built in unit with the engine is the single-plate clutch and four-speed transmission, of the S.A.E. standard shift type. The main shaft has ten splines, is machined from nickel steel, and is mounted on all ball bearings with a Hyatt roller bearing pilot at the front end. The countershaft and gear assembly is mounted on roller bearings, while the reverse gear is individually mounted with a Hyatt roller on a dead shaft. Gear reduction in low is 6.5 to 1, second is 4.0 to 1, third is 2.08 to 1, and reverse is 7.58 to 1. A six-volt S.A.E. opening is provided on the right side of the transmission case for power take-offs, such as are used for operating dump bodies, hydraulic pumps, etc. All gears are of alloy steel, heat treated, hardened, and lapped in pairs to insure quiet operation.

Peerless to Announce 1928 Models

The Peerless Motor Car Co. will shortly announce its new 1928 models. The changes said to be made are refinements for the most part, lower bodies, greater comfort, more luxurious upholstery, new color combinations in duotone lacquer and hardware of brushed silver.

The Enlarged Toy Department in Halle Bros. New Cleveland Store

Halle Bros.' New Toy Dept. at Cleveland

By Mildred O. Waugh

With the opening of the new Huron-Prospect store of the Halle Bros. Company, Cleveland, on May 31st the departments remaining in the Euclid avenue building have been granted roomy expansion.

The toy department has doubled in floor space and now commands the majority of the west side of the seventh floor in the Euclid avenue building. With the move from cramped quarters the policy of the department has changed in several aspects. Formerly, the majority of merchandise was not displayed; now with the addition of numerous display cases stress is laid on exhibiting a maximum number of articles. Outstanding in the show cases is a large one in the rear, built especially for doll displays. It consists of ten sections and runs the length of the department. Here the patrons can enjoy the hundreds of dolls from every country and in every style of costumes. Teddy bears and woolly dogs come into their own in this show case also.

Another big change in the department is the reorganization. Since moving, the stock has been segregated into seven distinct sections, complete minor departments in themselves.

Section number one which greets the customer immediately at the elevators, is called the Kindergarten department. Here blocks, cut-outs paper dolls, paint sets, crayons, beads and mosaic designs are mingled with everything complete for the children of kindergarten age.

Games of every imaginable description will be found in section two. All varieties of board games, ring toss, archery sets, golf, croquet, imported music boxes and even the diminutive typewriters which are now so much in vogue for younger children.

Construction toys constitute section three. All types of building sets, sailboats, soldiers, electrical trains; Indian, Policeman and cowboy suits, steamers and airplanes are also included in this section.

In section four, Dolls and stuffed animals are given full sway. This is a complete department store for dolls—including the latest styles in doll dresses hats and coats; outfitted bags for milady petite—suitcases—furniture wee basinets and beds latest models in doll carriages and finally the Doll herself—a complete outfit in the doll line. The stuffed animals are of all degrees of sizes and shapes from tiny kittykats to life-size St Bernard dogs, ranging from everything in horses to big brown bears.

Buddy-L, pressed steel toys are given a complete section of their own. Boys and even girls take exceptional pleasure in this department which carries every variety of

trucks, dumps, express, concrete mixers and out-door toys.

Nowadays a toy department is not complete without its separate furniture department with little brother or sister's rockers, victrolas, sewing machines which really sew, pianos, beds, buffets, desks etcetera.

Last but not least everything that cannot be put into one of the preceding sections, is placed in the big melting pot of Miscellaneous. This includes the sand toys for beach romps; rubber goods for baby's play; balls—parasols—and gorgeous doll houses which are exact duplications of real houses. Slated roofs, wood pannelled sides, porches, plastered walls on the interior, wee electric lights from hidden wiring—and have complete furnishing from rugs, sweepers, and reproductions of period furniture to tiny dishes and coffee pots.

In all the Halle Bros. toy department is very happy with its new furnishings—and spacious comfort and relief from congested traffic in holiday seasons especially.

7th Annual Chicago Merchandise Fair

To Be Held at the Coliseum, August 2 to 13, 1927

A GREAT many retailers of popular price (5 cents to $5.00) merchandise are looking forward to the opening of the 7th Annual Chicago Merchandise Fair, which will be held in Chicago's greatest exhibition hall, the Coliseum, from August 2d to 13th

More than 300 different Manufacturers', Importers' and Specialty Distributors' lines of merchandise will be assembled in the Coliseum, for the convenience of Merchants and Buyers and it is expected that not less than 2,000 will attend this Trade Fair to buy for their Fall and Holiday needs

This will be the 7th annual Chicago Merchandise Fair and the exhibit is devoted chiefly to a display of popular price merchandise of varying kinds. It is possible for visiting merchants and buyers to cover a great range in their purchases, as a very wide variety of General Merchandise, such as is sold in Department, Dry Goods, General and Variety Stores will be on display. Holiday and Gift Merchandise will, of course, be featured.

Full information regarding the Chicago Merchandise Fair can be had by writing to the Chicago Merchandise Fair, at 1513 South Wabash Ave., Chicago, or, 890 Broadway, New York City.

Shoot Your Ammunition

INSIST ON GETTING THEM. Your jobbers have advertising matter sent to them for distribution among the retailers. These booklets, folders circulars, etc. are useful to you for advertising purposes. Many are costly productions and will increase the demand for the merchandise. So when your jobber's salesman calls on you the next time ask him if his house has any such advertising matter; emphasize that you believe in the use of dealer's helps and therefore would be glad to have a supply packed with your shipment. Use such advertising forms for enclosures with packages, with bills and other letters, and for other advertising purposes

View of the Chicago Merchandise Fair, Held at the Coliseum, August, 1926.

ATWATER KENT RADIO

A Baltimore dealer *said this:*

"ONE of the big advantages of Atwater Kent Radio is that there's practically no night work for the dealer. Show your customers how to operate it in the daytime. It's so simple you don't have to go back."

And dealers everywhere know it's true.

When running around at night *can* be avoided—why not avoid it by concentrating on the Radio that people understand the minute you show them?

AUDIOLA

Audiola Six-Tube Stage Shielded Radio Receiving Sets

Audiola sets this season are of the single dial control, in that all condensers are controlled by one knob. The second knob controls the volume. In other words, a Steering Wheel and a Throttle.

The Chassis illustrated above is the 1928 STAGE SHIELDED Six-Tube Audiola. As in the past, Audiola sets embody all that is up to date in circuit design. STAGE SHIELDING is perhaps the greatest single development of the present season Proper STAGE SHIELDING results in greater selectivity and greater volume on distant stations and permits of the separation of stations that hitherto was impossible. It also eliminates interference between stations and enables the tuning in of distant stations free from all bothersome interference.

This Console has the new Audiola Six Tube STAGE SHIELDED Chassis, single dial control. Tuning dial is illuminated for convenience in tuning. Cabinet is finished in Walnut. The loud speaker is built in and is equipped with a high-grade unit. Ample space is also provided for all accessories, and the set comes complete with battery cable, ready for attaching. A remarkable instrument of finest construction and finish.

Each

P7971. Special Console SHIELDED Six WITHOUT ACCESSORIES. $132.00

P7972. Special Console SHIELDED Six Complete WITH ACCESSORIES and Built-in Speaker $204.00

1—100-Ampere Hour A Battery
3—45 Volt B Batteries.
2—4½ Volt C Batteries.
1—Complete Antenna Equipment.

The Audiola Baby Grand is an exclusive Audiola design which incorporates in a radio set all of the advantages that are to be found in a Baby Grand piano, in that it is designed to fit into the corner of the room for the same reason that the Baby Grand piano is always placed in the corner for best acoustics and appearance. The cabinet is of genuine Walnut with buried Walnut front, beautifully finished, and comes equipped with a high-grade loud speaker in the lower compartment. The chassis is the new Stage Shielded Six-Tube Audiola, assuring distance, volume and selectivity, with best of tone quality. Ample space is provided for all accessories.

Each

Electrically Operated Howard Radio Receivers!

By continued research, prudent engineering, and a policy of building nothing but the best the Howard Radio Co. has earned the leadership in manufacture of high grade receivers. Howard Radios are as near mechanically perfect as radios can be built today. They are guaranteed to give complete satisfaction.

"ELECTRICALLY OPERATED—Simple and convenient! No acids, no batteries to run down, no charger, no unsightly connecting wires, compact, easy to install—just like plugging in an electric iron or a toaster. An electrically operated set is the most economical in the long run. There is virtually no cost for upkeep.

These electric receivers must be operated on 110 volts alternating current, 50 or 60 cycle. With few exceptions this is the electric Current used throughout the United States. When ordering kindly specify current to be used.

Standard Battery or Battery Eliminator equipment can be supplied for use with Howard Receivers if desired. Write for descriptive catalog

Western Electric or R. C. A. No. 100A Speakers are recommended for use with Howard Radio Sets.

Consider it an exceptional privilege to be able to offer their customers the

Howard Radio

Nationally known as one of the finest Radio Receiving Sets in the field.

Incorporated in these new sets are all the most advanced radio developments. The Howard is well worthy of your consideration.

HOWARD RADIO
products are licensed under the following patents:

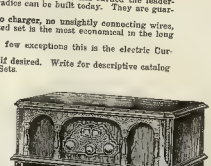
Radio Corporation of America (R. C. A.)

General Electric Company.

Westinghouse Electric & Mfg. Co.

American Telephone & Telegraph Co.

Hazeltine Corporation—Owners of Neutrodyne and Latour Patents.



P7980

Six tubes—Neutrodyne—three stages of radio frequency, detector and two stages of audio frequency.

Set employs ENTIRELY R. C. A. or CUNNINGHAM ALTERNATING CURRENT TUBES, first perfected and offered to the public July 1, 1927. The new A. C. tubes furnished with this set are non-microphonic—there is no objectionable hum.

Radio frequency stages and detector shielded in separate compartments of heavy brass.

The audio frequency amplifier is built up as a separate unit and is designed for use with a No. 210 Power Tube in the last stage.

The audio transformers are made of special design and noted for their faithful reproduction throughout the entire musical range.

Two dial control. The left hand dial tunes the loop or antenna and the right hand dial tunes the three stages of radio frequency. Broadcasting stations are easily located by means of our chart which shows dial bracket dial reading for all wave lengths and kilocycles.

Pilot light for easy visibility. Positive vernier arrangement for sharp tuning.

Cabinets of special Howard design, de luxe, rich, heavy simulated piano finish, combination straight line frequency and wave length. The receiver is designed for loop operation.

P7980. Six Tube Radio Receiving Set, with
1 "A" "B" and "C" Power Unit containing 1 R. C. A. No. UX216 Power Tube. $850.62

No speaker furnished with this set.

Shipping weight, 170 pounds. Size of Cabinet, 29 in. wide, 18¾ in. deep, 30 in. high.

Includes:

Walnut Cabinet
Loop Aerial,
4 R. C. A. No. 226 Tubes or Cunningham No. 326 Tubes.
1 R. C. A. No. 227 Tube or Cunningham No. 327 Tube.
1 R. C. A. No. 210 Tube or Cunningham No. 310 Tube.

Six tubes—three stages single dial controlled radio frequency, detector, two stages audio. Power tube No. UX210 or No. CX310 may be used at best stage if desired.

This set employs ENTIRELY R. C. A. OR CUNNINGHAM ALTERNATING CURRENT TUBES, first perfected and offered to the public July 1, 1927. The new A. C. tubes furnished with this set are not microphonic—there is no objectionable hum.

Chassis is of best grade aluminum, having an extra heavy front plate one-eighth in. thick. No steel or iron is used in the construction of the chassis, thus assuring greatest radio efficiency.

Condensers of heavy aluminum plates, rugedly built, gang reamed and faced to provide positive alignment, rigidity and permanence.

The coils are shielded. The spaces between the coils and shields are sufficiently large to permit maximum efficiency from each coil.

Dial equipped with pilot light, and placed in the proper line of vision.

7 Tube Shielded Chassis. Top shield removed. Note individual shielding for each stage.

Howard Seven Tube COMPLETELY SHIELDED RECEIVER—Maximum purity of reproduction featured by this exceptional feature. Entirely loop operated. Equipped to use Power tube No. 171 in the last audio stage. This receiving set is offered to real enthusiasts as the most perfect on the market today. Correct design and construction enable one to play extreme distant stations with strength and clarity or to select a local program without any interference whatsoever. The tone effect is mellow, restful and instrumental at times, like the resonant qualities of the seasoned violin. Cabinet is all metal, walnut finished. It is trimmed in solid walnut with gold bronze fittings.

Youth Must be Served

TRY to deprive a boy or girl of music and toys and you'd start a revolution. If you're a father you know it!

Music and toys are every child's right, and every child knows it. And in these enlightened days parents don't wait until Christmas—they keep their children supplied with toys the year 'round.

Merchants who know this truth keep General Phonographs—the ideal combination of toy and music—on display every day, twelve months in the year, and sell them every day, twelve months in the year. Hundreds of stores large and small in big cities and small towns are profiting every day just by displaying and playing General Phonographs in their toy departments.

What they are doing you can do. Try it and see. Send today for samples of these attractive phonographs, and for prices and discounts.

Babe Ruth Line of Mitts and Gloves

Fielder's Glove

Made of a very fine selection of Dark Brown Horse Hide, lined with soft glove leather. Strongly bound edges. Leather welted seams, diverted between fingers to prevent ripping. Laced at the wrist to permit change or adjustment of padding. A good, hand formed padding which stays in place. Wide, deep sure-catch pocket. Wide web between thumb and first finger. It has all of those fine points which assist in good playing. Each in box.

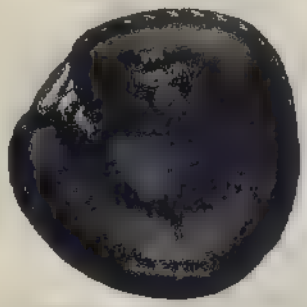
No. 6R40. Each..... 2.35

Fielder's Glove

The horsehide leather is specially tanned and specially oil-treated to give it permanent flexibility and extra wearing quality. The hand-made padding is fitted into each glove. The seams are leather welted and diverted between the fingers to prevent ripping. Laced at wrist to allow change or adjustment of padding. Long thumb with lacing adjustment to form a wider or deeper pocket. Lined with durable, soft leather and leather bound. Each in box.

No. 6R50. Each 3.35

Catcher's Mitt



This mitt is moulded on one of our most popular Professional patterns. Compact and snug fitting, it hugs the hand and the built-in, moulded pocket is always in the right place which helps to make sure catches of hard pitched balls. Made of real Horse Hide of a Dark Brown color. Bound and laced edges. A hand formed pad of good felt. Trap lacing between thumb and face allows adjustment of pocket. Strong strap and buckle at wrist and felt padded extension under the buckle to protect the back of the hand. Every little feature that makes a real mitt, with all of the desired playing and wearing qualities. Each in box.

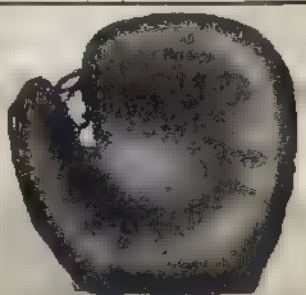
No. 7R45. Each..... 3.35

This goods are endorsed by the famous Babe Ruth and his autograph appears on every article.

Catcher's Mitt

A regular big league Professional model with every quality necessary to make a good mitt. Made of selected light brown, smooth grained Horse Hide, the toughest and best leather for the purpose. The entire face is moulded from one piece of leather. The fingers are double stitched to the back. The edges are leather bound and laced. A strap and buckle at the wrist hold the mitt snugly to the hand. A felt lined, leather extension under the buckle prevents chafing on the back of the hand. A deep, sure-catch pocket is formed in the felt padding and moulded in the leather face. Each in box.

No. 7R46. Each..... 5.25

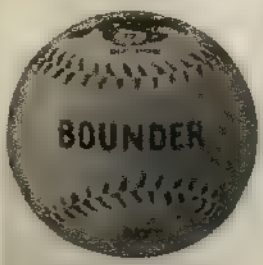


Made of light brown Horse Hide and fitted with a hand-made felt pad with the natural built-in pocket. The pad may be adjusted if desired. The edges are leather bound and leather laced. Strap and buckle at wrist with protector to prevent buckle from rubbing the hand. Lacing between thumb and face permits adjustment of depth of pocket. High or low, wide or close, this mitt helps to hold them. Each in box.

No. 7R75. Each..... 3.35

"Shure Winner" Baseballs

BOUNDER



Bounder. 8½ inch ball, center of best quality cotton waste imitation leather cover. Sewed with strong waxed red thread. Very popular with the small boy. One dozen in box.

No. 5R1. Per gross. 8.75
Per dozen .. .... .75

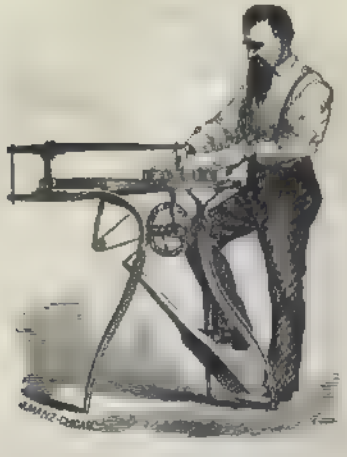
WOOD WORKING MACHINERY.

SCROLL SAWS.

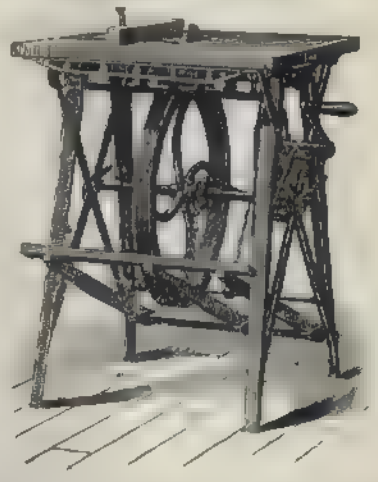


Net each

No. 7—Cast iron frame, hard maple table and arms, balance wheel runs on steel arbor, 7 in. blade, complete with 1 dozen saw blades. ..... Market Price

For carpenters, cabinet makers and other wood workers. Will saw [illegible] per minute in [illegible]. Ordinary rate of speed [illegible] leaves the work as smooth as is possible for saws to do it, and [illegible] in an instant for inside work. The swing around the blade under the arm is 24 in. Weight 55 lbs. boxed ready for shipment. [illegible]

COMBINED CIRCULAR AND SCROLL SAWS.



Net each

No. 25—Circular saw only (with two 6 in. saws,) without attachments ..... Market Price

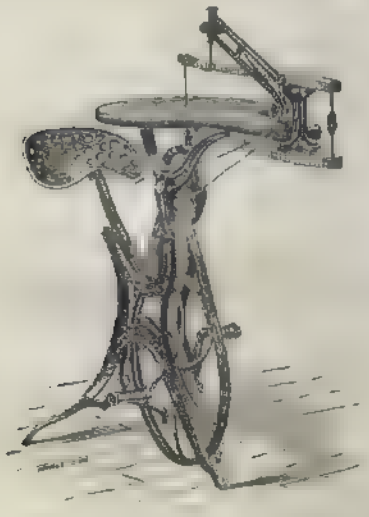
No. 26—Scroll saw attachment (1 dozen saws,) extra .....

No. 27—Boring attachment, with drill chuck, extra .....

No. 28—Combined machine, complete with attachments. .....

Combines a circular and scroll saw, the circular saw being the machine proper with the scroll saw as an attachment. Neither the circular nor the scroll saw interferes with in the slightest degree with the successful operation of the other. The capacity of the scroll saw is the same as that of No. 7. The table can be handily adjusted up or down by a cam to allow any desired depth of cut being made by the saws or cutter tools. The circular saws are 6 in. in diameter, and reach 1½ in. above the table. Weight boxed ready for shipment, 350 lbs.

VELOCIPEDE SCROLL SAWS.



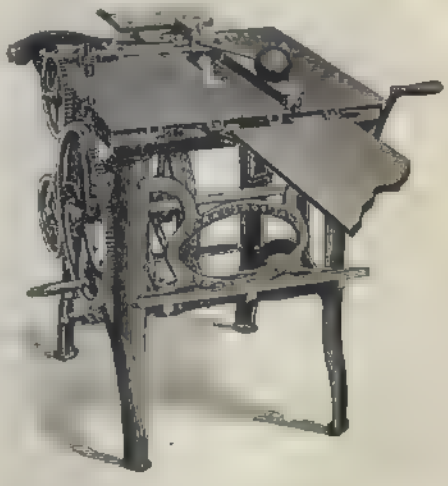
Net each

No. 2—Cast iron frame, hard maple table and arms, with 1 dozen blades (without attachment) ..... Market Price

No. 28—With boring attachment, including one ⅛ in. bit .....

The swing around the blade under the arm is 24 in. The saw weighs 90 lbs., boxed ready for shipment, 130 lbs. The boring [illegible] can be furnished at any future time, if not desired when ordering the machine. We can furnish extra blades at the following prices, each: 1-16, 15c; 3-32, 15c; [illegible], 20c; 5-32, 20c; 3-16, 25c; 7-32, 30c; [illegible], 35c.

CIRCULAR SAWS.



Net each

No. 4—Iron and steel frame, 30x30 in., iron plate, complete with self-feed, two 10 in. circular saws (1 each rip and cross-cut,) weight 400 lbs., crated 480 lbs. .....

No. 5—Countershafts, for steam instead of foot power, otherwise same as No. 4. ..... Market Price

No. 6—Boring attachments .....

No. 7—Countershaft and belt pulleys .....

No. 8—Universal mitre gauges .....

Hand and foot power for hard or soft, thick or thin lumber. Can be used as a cross-cut saw. Self-feed mechanism can be instantly thrown back to rear of machine also rip gauge, leaving table perfectly clear for cut-off work. Can be used for rabbeting and grooving. The self-feed can be used for grooving and rabbeting as well as with [illegible] is used for ripping. Cutter heads are also used for grooving and dadoing and with knives of suitable width for joining. Can be provided with boring attachment, which is the same as used on the combined machine.

WOOD WORKING MACHINERY.

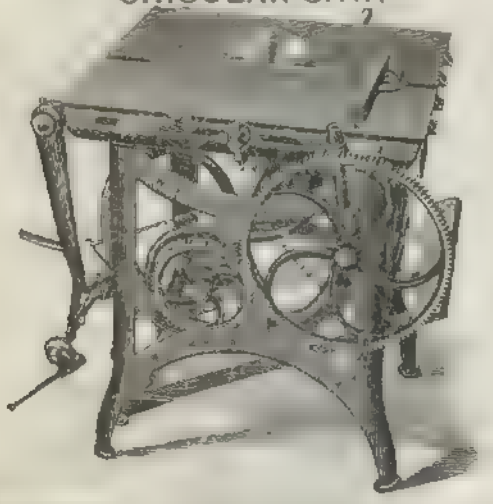
HAND CIRCULAR RIP SAWS.

Net each

No. 14 Weight 190 lbs., boxed 200 lbs., complete with two 10 in. saws ..... Market Price

[illegible] to 3¼ in., and of any width up to 19 in. The rollers are self-adjusting to thick, thin or uneven lumber. The saw can be instantly set to or from the gauge to any width desired. Rabbets, bevels, tenons, etc., can be cut to advantage, and by using two sawsside by side grooving for window and door stops, etc., can be done. (An extra saw is furnished for this purpose.)

CIRCULAR SAW.



This new machine we are placing on the market to meet the demand for a foot and hand power circular saw stronger and covering a wider range of work than either our hand circular rip saw or our combined machine.

The new machine is not intended to supplant either of the old machines but is designed to cover a field of its own and we offer it to carpenters and builders, cabinet makers, picture frame makers and woodworkers in general believing we are presenting the strongest, most powerful and eminently practical foot and hand power circular saw that has ever been built.

The machine is very strongly [illegible] throughout first class. The table is of iron, planed perfectly true [illegible] inches. The large range of work which the machine will do [illegible] the following enumeration of its various arrangements and combinations.

First: It can be used as a hand and foot power circular rip saw with self feed and this feed can be regulated properly for hard or soft, or thick or thin lumber, and is self-adjusting for number of different and uneven thickness. With [illegible] saw will rip up to 2¾ inches thick can be ripped [illegible] inch saw and [illegible] has.

Second: It can be used as [illegible] self feed mechanism can be [illegible] thrown back to the rear of the machine, as also the rip gauge, leaving the table [illegible] for cut-off work. The self-feed mechanism can be put in position for use or thrown back out of the way, without requiring the use of a wrench or the removal of [illegible] parts. The cut-off gauge can be set at any required angle. The [illegible] have a high speed for cross-cut work and slow speed for ripping.

Third: The machine can be used for rabbeting and grooving and the high speed at which the saw revolves can be run insures smooth and clean-cut work. The [illegible] feed [illegible] for [illegible] and [illegible] for ripping [illegible] and [illegible] and [illegible] width for joining. The [illegible] steel [illegible] and [illegible] depth of grooves and rabbet.

While the machine is designed particularly to be used by hand and foot power it can be driven equally well by steam or other suitable motive power, and will therefore be prepared to furnish the machine arranged with counter shaft and belt pulley when desired.

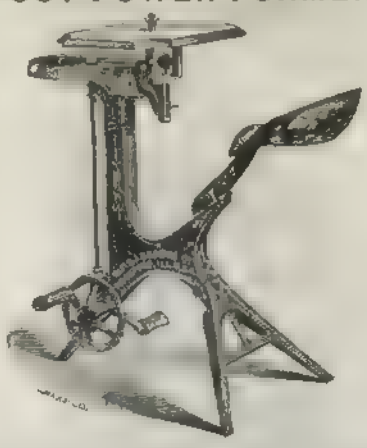
Net each

No. 4—Complete with self feed, with two 10 in. circular saws, (one rip and one cut off), weight boxed 500 lbs. ..... Market Price

Boring attachment .....

Counter shaft and pulley, for steam. .....

FOOT POWER FORMER.



The cut represents a machine for moulding edges on brackets, scroll work, panel work, regular and irregular mouldings of all styles up to ¾ inch. The speed of the knives is from twenty to twenty-five hundred per minute. By the aid our **PATENT VELOCIPEDE FOOT POWER** the knives are at the will of the operator, caused to rotate in either direction that the grain of the wood may require, thus avoiding all complicated devises for reversing motion usually employed on single spindle formers. The great speed of the knives insures rapid and smooth work.

The spindle and its bearings are of steel with adjustments to take up the wear. The parts to set the machine for the use of different knives and work are convenient and all substantial and durable. The table can be lowered to give 2¾ inches between it and the lower cutting edge of the knife.

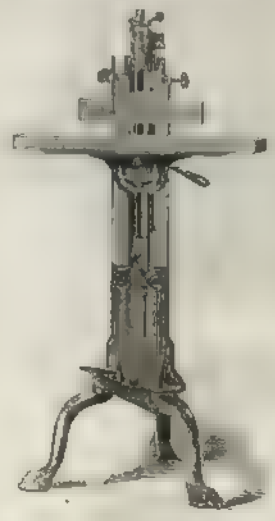
Net each

No. 20—Weight 80 lbs., boxed 110 lbs. ..... (without knives) ..... Market Price

Extra Knives .....

List of knives sent with each machine and such as you maywant can be sent by mail.

FOOT POWER MORTISERS.



Net each

No. 9—Foot power mortisers, without chisels, weight 135 lbs., boxed 170 lbs. .....

No. 10 Self-cleaning mortising chisels, sizes ¼, 5/16, ⅜, 7/16, ½, ⅝, ¾, ⅞ and 1 in. ..... Market Price

No. 11—Blind slat chisels, with 3 sets bits. .....

Has great range for work, power on the chisel, accuracy in its action, and has all the required adjustments, which are easily and quickly made. Has abundant strength, is durable, and occupies but little space. Except the supplementary table and treadle, the machine is made entirely of iron and steel.

Get the Monarch Building Hardware Proposition

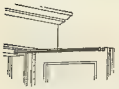
and get your share of Building Hardware profits. Here is a proposition that takes the guess work out of bidding on a job. Your profit is assured because your price is assured. Your future is assured because quality is sure.

Monarch offers the wide awake building hardware merchant a line made and guaranteed by a firm with more than 20 years experience building casement hardware. These are products of such unique simplicity in design that they can be offered to contractors with the full realization that labor cost will be lowered because more units per hour can be installed.

MONARCH *Control Lock*

for outswinging casement windows can be used on top or under the stool. Positive direct action in opening, closing or locking window in any position desired. Noiseless—*No gears, keys or ratchets.* Solid brass or steel heavily plated

MONARCH *Automatic Stay*



for in or outswinging casement windows, transoms, or pivotal windows where locking feature is not needed. Not necessary to take apart to make adjustments or install. Friction increased or decreased by slight turn of outer tube. Furnished in any finish desired.

MONARCH CASEMENT CHECK

for doors, casement windows, transoms or any hinged opening. Friction adjusts by turning screw in pivot plate. Friction is lasting. Made in steel and solid brass.

Monarch Casement Hardware comes to you fully assembled, packed in individual containers ready for installation. Made of the finest materials together with quality of manufacture and workmanship, they carry a guarantee that removes the question of service from your mind. Find out NOW what this proposition means to you—A request will bring you full details

TOY TRANSFORMERS

THORDARSON "DANDYTOY"
"Also Dept. 7, Page 1896."
For Alternating Current 110 Volts, 60 Cycles.

Mounted in black enameled steel case and immersed in an insulating compound which renders it indestructible and impervious to moisture.

While primarily intended for operating electric toys of all kinds from the house lighting circuit, it can also be used to excellent advantage for many other purposes, such as operating annunciators, burglar alarms, induction coils, etc.

The range of voltage is from 2½ to 27½ volts in steps of 2½ volts each.

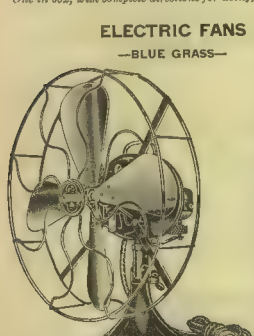
The rheostat which controls the various voltages is conveniently mounted in front of the apparatus.

Length 3⅛ ins; width 3 ins; 2⅛ ins high. Complete with 7 ft of flexible cord and attachment plug.

	Each
No. D-T—Capacity 75 watts	6 90
One in box, with complete directions for using; wt each 4 lbs.	*$3 50*

ELECTRIC FANS

—BLUE GRASS—



Two Bearings, Induction Type Motor. Solid Brass Standard Blades, Pitch and Shape. Polished Lacquered Finish.

Black enameled welded steel guards; cast iron base, end brackets and motor body, polished black enameled finish. Three speeds, off, slow, medium and high. Grease cup lubrication. Cast iron oscillator case with end brackets and hinged joint; non-oscillating fan can be tilted 15 degrees forward, 90 degrees backward; oscillating fan can be tilted about 20 degrees forward or backward in desk position or 20 degrees forward in bracket position with set screw to prevent slipping beyond this angle. Arc of oscillation 90 degrees as shipped, easily changed to any desired number of degrees less than 90. Complete with 10 feet of cord and separable attachment plug.

100 to 125 Volts, 60 Cycles, Operated On Alternating Current.

No. 822—10 in. Long, 1/2 in. Special Steel Bar, Burnished Nickel Finish, Fits Mossberg Standard Sockets, Weight Each 12 Oz. $0.85

WRENCH SOCKETS

MOSSBERG INTERCHANGEABLE

Small Series Sockets

For owner work there are no wrenches which compare with drawn steel sockets at as low a price, and these Mossberg drawn steel sockets that have been on the market for twenty years are quite guaranteed

Small Series Sockets are marked to exact opening of sockets. The marking of each socket represents the short diameter of nuts, bolt heads and screw heads plus the clearance

Construction—Drawn by pressure from cold rolled steel, thereby retaining the necessary long grain in structure.

Finish -Mottled and lacquered.

When you see a "Hex" think of Blackhawk

These Blackhawk Features Help Sell Tools in Sets

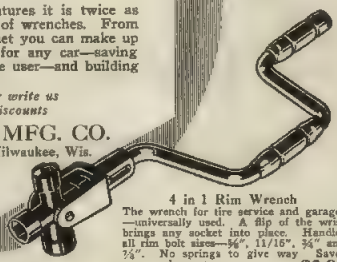
Long on quality—short on price—you can't beat Blackhawk Socket Wrenches for features that *sell goods.*

The Blackhawk line is outstanding in design—thin wall, taper nose, heavy shoulder sockets, and extra sturdy handles having just the right reach and leverage.

With the appeal of these features it is twice as easy to push the idea of sets of wrenches. From your Display Boards or Cabinet you can make up sets for the garage trade, or for any car—saving time, work and money for the user—and building up volume for you.

Ask your jobber, or write us for catalog and discounts

BLACKHAWK MFG. CO.
Dept. G Milwaukee, Wis.



4 in 1 Rim Wrench
The wrench for tire service and garages—universally used. A flip of the wrist brings any socket into place. Handles all rim bolt sizes—⅜", 11/16", ¾" and ⅞". No springs to give way. Saves time and sweat.
List price $3.95

Chevrolet Set No. 30
This set of four Blackhawk One-Piece Wrenches will handle most of the routine Chevrolet jobs. Blackhawk quality throughout, and the famous Blackhawk features.

Blackhawk Pumps for All Model T

"Chief"—most powerful made. Turbine head, double bronze bearings, lubrication. Retails, $7.50

"Scout"—the wonder value in the low price range. Retails, $5.00. Each fits all Model T motors and comes complete with belt and horn bracket.

BLACKHAWK

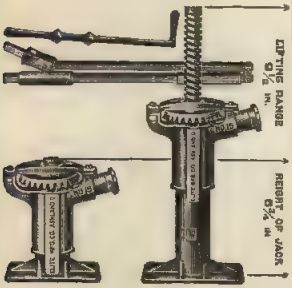
AUTO JACKS.
MILLERS FALLS.

For Balloon Tires.

Slips under an axle 6¾ inches off the ground with a 10¼ inch lift. Specifications: Steel screws; housing and gears malleable iron; all working parts enclosed—dirt-proof; extensible handle; black enameled base; minimum height, 6¾ inches; maximum height, 10¼ inches; diameter of base, 5 inches.

No. 130. Capacity, 2 tons. Wt. each, 10½ lbs. .....Each **$6 50**

BALLOON TIRE.



Both screws work together—twice as fast as ordinary jacks. Neither the top nor the center screw turn This avoids the tendency for the jacks to twist from beneath the load. Greater lifting range than any other jack—10 inches. Guaranteed to take care of all tires on any car. Handles operate from the center of the jack making it possible at all times to place the jack in position with the handle. Note the long 36 inch handle with the patented semi universal joint. It is flexible enough to give all the advantages of a universal joint yet rigid enough to place the jack in position. Each jack is packed in a carton with the handle.

No. 15. Height, 6¾ to 17 ins. Cap., 3000 lbs. Wt. each, 7½ lbs. Each **$5 00**

BLACKHAWK JACKS.
HYDRAULIC OIL POWER.
FOR AUTOMOTIVE AND INDUSTRIAL WORK.

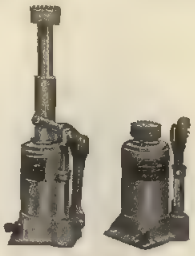
Blackhawk Hydraulic Jacks fill a long felt need for a positive easy means of lifting. The exclusive patented features of these jacks permit modern application of hydraulic principles. They are tools of power, light in weight, but capable of lifting heavy loads with very little effort. Loads are lowered automatically with hand controlled release valve. Guaranteed to stand up under severe service and soon earn their cost in time saved and efficient service rendered. All jacks tested at factory far beyond rated capacity

TOURIST. 1½ TON.

Single Lift for Car Owners.

Pump handle designed so jack can be placed and removed without getting under car.

Tourist. Capacity, 1½ tons; height, 9 inches; lift, 6 inches; total height, 15 inches. Wt., 6 lbs.....Each **$7 50**



HI-WAY. 2 TON.

Double Lift for Balloon Tires

Especially designed for balloon tires and particularly adapted to repair shop use. Telescopic double lift ram, low built with extra high lift. Bayonet grip handle allowing placing of jack without getting under car.

No. B7. Capacity, 2 tons; height, 7 ins.; lift, 6 ins total height, 13 ins. Wt. 12 lbs.. ... .Each **$20 00**

No. B8. Capacity, 2 tons; height, 8 ins.; lift, 8 ins.' total height, 16 ins. Wt., 13 lbs... . .....Each **$20 00**

No. B9 Capacity, 2 tons; height, 9 ins.; lift, 10 ins.; total height, 19 ins. Wt., 14 lbs.....Each **$20 00**

3 TON.

For Bus Lines and Delivery Fleets.

Built for busses, fast delivery trucks or speed wagons; can be placed under low built equipment allowing sufficient lift for tire changes; neither passenger or load are disturbed; one man easily lifts loaded bus or truck; lowers in even gradual movement; operator controls speed; bayonet grip handle

No. A9. Capacity, 3 tons; height, 9 ins; lift, 5½ ins.; total height, 14½ ins Wt., 14½ lbs.....Each **$20 00**

No. A11. Capacity, 3 tons; height, 11 ins.; lift, 7 ins; total height, 18 ins. Wt., 16½ lbs .... . .Each **$20 00**

7 TON.

For Heavy Trucks and Coaches.

Can be operated by one man with ease, and without disturbing load; simplicity, efficiency and safety of operation readily demonstrated

No. C11. Capacity, 7 tons; height, 11 ins.; lift, 7 ins.; total height, 18 ins Wt., 18½ lbs.....Each **$25 00**

18 TON.

For Heavy Lifts, Requiring Low Jacks.

For extra heavy truck work and axle straightening. Heavy duty tire service stations find this jack a labor and time saver. Will lift heaviest truck without disturbing load; adaptable to press work.

No. E11. Capacity, 18 tons, height, 11 inches; lift, 5½ ins.; total height, 16¼ ins. Wt., 43 lbs.....Each **$50 00**

AUTO JACKS.

6-Ton Truck.

Malleable.

Strongly reinforced and designed for the heaviest kind of loads such as heavy motor trucks, trolley cars, tractors, mine cars, etc.; easy to operate under their full rated load.

No. 26. Capacity, 6 ton; height, lowered, 11½ inches; raised, 16½ inches; diameter of screw, 1½ inches. Wt. each, 17 lbs.....Each **$7 20**

Standard No. 3. Capacity 2000 lbs.; height, bar down, 11½ inches; height, bar raised, 17¾ inches. Bar rack made of steel; teeth, machine cut; balance of Jack, malleable iron. Designed for larger sized cars. Wt. each, 11¼ lbs.....Each **$5 10**

Standard No. 4. Is an ideal jack for a light car with low axles, one of the best for Ford and Chevrolet cars; is fitted with a swing top to give a wider range. Capacity, 1500 lbs.; height, bar down, 11 and 12¼ inches; height, bar raised, 16¼ and 17½ inches. Wt. each, 6 lbs.....Each **$3 25**

Leader No. 21. Capacity 1500 lbs.; height, bar down, 5¾ and 9¼ inches; height, bar raised, 11 and 14½ inches. Made of malleable iron of highest grade. Designed for light weight cars. Wt. each, 4¼ lbs.....Each **$1 70**

MILLERS FALLS.

Easy Working. Sturdy. Dependable.

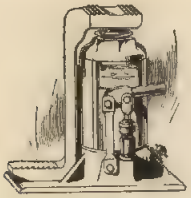
Handle Controlled.

The body of handle is steel tubing, each end of which is strengthened by a brazed steel sleeve. The telescopic rod is ⅝ inch hexagon cold rolled steel; folds to a minimum of 18 inches and extends to 36 inches; is extra strong at the joint where it attaches to jack. You can slide jack around, even lift it off the ground with perfect safety. Handle turns easily whether load is light or to capacity. Perfect control without stooping or reaching under the car. Operator is full length of handle away from all dirt and grease. Direct worm drive with ball bearing end thrust. Working parts of steel. Worm is heat treated. broad rectangular base of grey iron, checked on bottom. Barrel of malleable iron. Cap and screw one piece of forged steel, practically unbreakable, and cannot be screwed out of barrel. Lifting worm gear shaft releases screw instantly. Base is adjustable, permitting three ranges of heights before screw is raised. Every jack is warranted to be mechanically perfect.

No. 145. Capacity, 2 tons; minimum height, 9½ inches; maximum height, 18 inches. Wt. ea., 10½ lbs. Each **$8 00**

BLACKHAWK JACKS.

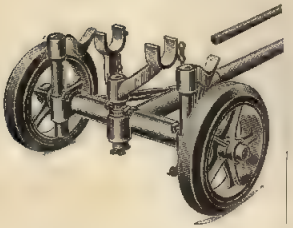
HYDRAULIC OIL POWER.



No. H14. Lifts from 1½ inches of floor; toe lift and double pump; lifting range from 1½ inches to 8¼ inches from floor; can also be used for straight lift work on ram. Capacity, 15 tons; height, 14 ins.; total height, 22½ ins. Wt., 108 lbs.....Each **$110 00**

TOWING JACKS.

STANDARD.

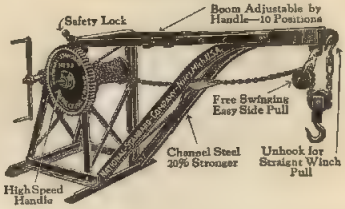


The front axle supports are adjustable for height with reversible offset; the chains secure the axle against side slip. The "V" blocks will carry any rear axle without interference with truss rods; no clamps necessary; tongue is of steel, tubular telescopic construction, and may be removed. The entire front or rear end of a car can be supported and towed, instead of carrying just one end of the axle.

No. 70R. Width overall, 36 inches; tongue closed, 7 ft. 3 inches; tongue extended, 12 feet; rubber tired wheels, 16x3½ in. Wt. each, 215 lbs. Each **$85 00**

WRECKING CRANES.

NATIONAL STANDARD.



Safety Lock
Boom Adjustable by Handle—10 Positions
Free Swinging Easy Side Pull
Channel Steel 20% Stronger
Unhook for Straight Winch Pull
High Speed Handle

Boom is made of heavy channel steel, which has 15 to 20% more strength than angle iron; is adjustable to ten positions and can be raised or lowered by the handle.

The crane is considerably heavier than the average and the frame is built in a substantial manner. There are no parts in breaking strain; all members are in compression or tension strain.

The free swinging pulley on the boom permits the wreck to be pulled sidewise or from any angle without locking or binding

The chain can be detached from the head and used as a winch which saves the expense of additional equipment for this purpose.

One pound of pressure on the handle lifts 120 pounds on the hook.

The handle can be used on either side of the crane for high and low speed adjustment.

No. 93. Height, from 40 to 70 inches; base, 30x36 inches; maximum leverage, 120 to 1; size of chain, ⅝x26 ft. long; length of boom, 72 inches. Net. wt., 390 lbs. .....Each **$125 00**

TOWING POLES.

ONE MAN UNIVERSAL.

This is a towing pole that will save one man's time when pulling in cars. This model can be attached to any axle, either of the I beam or tubular type, and will guide the towed car without a person at the wheel, the only model that can be universally used for all cars. It is easily and quickly attached. The guiding arrangement can be firmly fastened to the towed car's axle and steering cross tube, not interfering with the splash apron. The steering attachment bar and clamp can be adjusted either in front or just at the rear of the axle clamp, depending upon the splash apron conditions. The hinged joints of the guiding attachment are so arranged that turning corners is safe in every detail. A heavy coil spring is inserted in the pole to absorb the shock of starting and stopping and in running over rough roads. There is a universal attachment at the opposite end of the pole for fastening to the towing car, and will likewise fit any axle.

No. 75. Length, 6 ft. 8 inches; diam., 1⅝ inches. Wt., 45 lbs....Each **$30 00**

CREEPERS.

BOYCO.

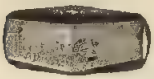
The Boyco all steel creepers are built to stand up under heavy usage. They are made of solid pressed steel; two pockets are built at the end to hold bolts, etc., has a comfortable head rest and equipped with heavy casters.

Boyco. Size, 15½x45 inches. Wt., 16 lbs. .....Each **$8 50**

HAMMERS.

STRIKING OR DRILLING.

Solid Steel; Dead Black Finish; Polished Faces.



Also Known as Double Faced Sledges.

The smaller sizes are frequently used as hand drilling hammers and are known to contractors as Single Jacks, while the larger sizes are often called Double Jacks. Used by blacksmiths, railroads, quarrymen, contractors, wood camps, etc., for all striking purposes.

LANTERNS
—BLUE GRASS—

Our line of Blue Grass lanterns has been selected with the utmost care.

While most attractive in appearance we have considered their light giving properties and their substantial construction as of prime importance, eliminating fancy frills and doubtful talking points which did nothing but extra cost to dealer and consumer.

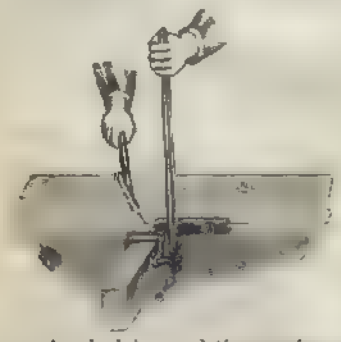
FLOORING CLAMPS.



A very handy labor and time saving device for laying flooring; takes a 2 in. joist in a vise-like grip; instantly applied and released; no adjustment necessary; works fast.

	Net per doz.
NO. 1—Japanned malleable iron, length 16½ in., width over all 6½ in., weight 30 lbs. per dozen	$18.00

LOOSE.

COMBINATION.

YANKEE.

This vise is mounted on Swivel Base for use on bench, and its upper part is quickly detachable for use on Drill Press, Shaper, etc., and putting back again on Swivel Base.

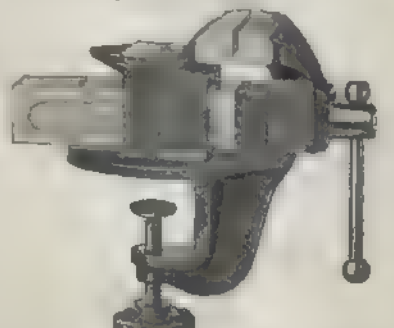
The Swivel Base on which the vise is mounted is easily and firmly locked or released by a short movement of lever on one side.

The Base has threebosses on under side to give a level bearing on bench.

	Net each
NO. 1991—Jaws 1½ in. wide, ½ in. deep, opens 1½ in., height with base 3⅜ in., length 4⅝ in. dia. of base 2½ in., weight 2½ lbs. each	$5.00
NO 1992 = Jaws 2 in. wide, 1½ in. deep, opens 2 in., height with base 4⅛ in., dia. of base 3½ in., length overall 6 in., weight 5½ lbs. each	7.50
NO 1993—Jaws 2½ in. wide, 1⅝ in. deep, opens 3½ in., Height with base 5½ in., length 8½ in., dia. of base 4½ in., weight 13½ lb each	12.50

LUTHER VISES.

QUALITY BUILT.



These vises have the following special features

Bronze Feed Screw Nut, made extra large and heavy. This is the heart of a vise and its wearing qualities are many times that of the usual cast iron construction.

Tool Steel Feed Screw, accurately machined from solid stock, larger and longer than used in similar vises.

Extra Wide Jaws, ¼ to ⅜ in. wider than most vises. Wide opening of jaws greatly increases their utility.

Parallel Slide Bar, this exclusive construction practically doubles strength of the slide bar.

VISE NO.	V91½	V92	V92½	V93
Width of jaws	1½	2¼	2½	3¼ in.
Opening of jaws	1½	2¼	2½	3½ in
Weight each	4	6¼	10	13 lbs.

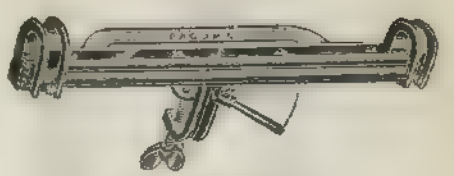
Stearns. Net per doz.

NO. 11—Japanned, nickel plated guide, adjustable to three rigid positions, 16 in. flat steel guide bar, 10½ in. rubber cushioned jaws, screw clamp, complete with file, weight 105 lbs. per dozen **$75.40**

ONE IN A BOX.



PAGOMA

Folding, Wrought Steel, Black Enamel and Nickel Plated.

Made entirely of cold rolled steel, easily attached and detached, making a firm solid vise for filing or setting.

It is seated close down to the work and will not quiver, it is attached by clamp and when detached and folded takes up less room in tool chest and is lighter than any other saw vise made.

The Pagoma saw clamps show a very marked improvement in construction, material and workmanship, over any saw clamp heretofore offered, being made throughout of steel. It is light in weight, strong and serviceable.

Rubber Pad—With saw properly adjusted and set low down, the clamp is practically noiseless.

Binding Clamp—No hammer or screw driver needed. Quickly put up ready for use and saves time.

Eccentric Locking Bar—Will hold thick blades or thin ones, equally well by throwing the lever more or less as required.

To Joint—To joint saw, invert the clamp, fastening it upside down to bench and hold the saw by the back of the blade.

Rubber Pad Under the Back Jaw. Net per doz.

NO. 100—Length over all 12½ in., height 2 in. weight 19 ozs. each weight per dozen boxed 20 lbs..... .....
.. ..List per dozen $15.00 **$32.90**

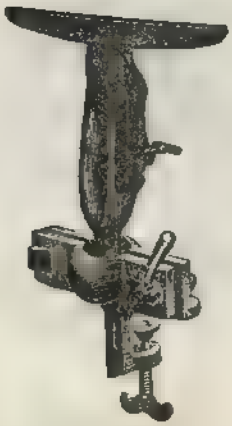
ONE TWELFTH DOZEN IN A BOX.

This vise is the strongest, lightest and cheapest rubber jaw folding vise on the market.

Net per doz.

NO. 67—Length of jaw 10 in., weight each 1¾ lbs **$18.60**

ONE IN A BOX.

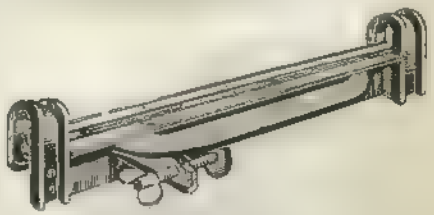


Ball and Socket. Net per doz.

NO. 5—Malleable iron, japanned, 9½ in. jaws, polished faces, adjustable to any position and locked by lever clamp, malleable screw clamp, height above bench 10 in., height over all 14 in., clamp opens 2¼ in., weight 112 lbs. per dozen **$31.44**

Stearns' Pattern. Net per doz.

NO. 3—To clamp to bench, adjustable, malleable iron, japanned, 9½ in. plain faced jaws, malleable iron screw clamp, pivoted outer jaw with cam lever tightener, height above bench 9½ in., length over all 14½ in., clamp opens 1¾ in., adjustable to swing forward and locked by lever, weight 78 lbs. per dozen..... **$21.00**



"SUPERIOR."

These vises are made from all steel, riveted together and practically unbreakable; has patented eccentric locking bar. The bar grips the saw evenly the length of the jaw.

All Steel, Japanned And Nickel Plated.

Net per doz.

The biggest money-making horn

—it earns triple profits for dealers

EVERY time you sell a cheap horn you make only $2.50 or $3.00 . . . every time you sell an Original-Bosch horn you make about $10 or more (depending on quantities).

As you know, with the cheap horn you risk complaints . . . expense and time of servicing . . . even your reputation. But the Original-Bosch horn, *you can be certain*, will not get out of order, nor need attention, nor fail the driver in an emergency. You make a friend every time you sell one!

No matter which horn you sell, the purchaser won't "repeat" in a hurry anyway, because a horn isn't the kind of article he buys every day. So why not sell him the horn on which you make triple-profits—the horn which earns about $10 for you instead of $3—that is the Original-Bosch horn!

The beautiful demonstration stand, which you will receive as part of our new selling plan, creates interest in and sales for the Original-Bosch horn. Any customer will consider it an economy to pay $25 for this horn when you tell them that it will outlast the life of the car itself.

Write for triple profits plan

If you, too, want to earn triple profits and render a real service to your customers, write today for a copy of the folder illustrated at the left, and for full information about the new Original-Bosch horn plan which offers a longer discount to dealers and enables you to carry this horn without loading yourself up.

The Original Bosch

ROBERT BOSCH MAGNETO COMPANY, INC.

No connection whatsoever with the American Bosch Magneto Corporation

Robert Bosch Magneto Co., Inc.
2601B Queens Boulevard
Long Island City, New York

Please send copy of folder "A horn that increases the speed of your car" and complete information explaining how I can make triple profits from the sale of Original-Bosch horns.

Name . . . . . .

Address . . . . . .

BOLT AND SCREW CASES

BROWN'S PERFECTION

Drawers are Square, with No Waste Space at Center Labeled with Size of Screw or Bolt. Each Drawer will Hold a Full Package of Size Indicated Case Revolves Easily, Whether Empty or Full.

BOLT

Made of Good Quality Tennessee Oak, Hard Oil Finish. Drawers are Made Square, with No Waste at Center. Forty Drawers. Height, 37 Ins. Diameter, 22 Ins.

Labeled as Follows.

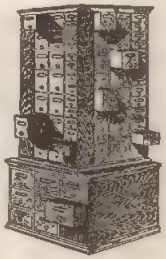
1/4x1/4, 1/4, 2, 2 1/2, 2 3/4, 3, 3 1/4, 4, 4 1/2, 5,
1/4x1/2, 1 1/2, 2, 2 1/2, 3, 3 1/4, 4, 4 1/2, 5, 6.

1/2x2, 2 1/4, 3, 3 1/4, 4, 4 1/2, 5, 6, 7, 8,
1/2x3, 3 1/2, 4, 4 1/2, 5, 6, 7, 8, 9, 10.

Each

No. 40—Wt., Each, About 180 Lbs..... $27.00

COMBINATION BOLT AND SCREW CASES



Made of Good Quality Tennessee Oak, Hard Oil Finish. Same as No. 40, Except Corners are Left Square and Filled in with Small Drawers for Screws.

UPPER CASE, ONLY; WITHOUT BASE

With 112 Boxes. 56 for Bolts and 56 for **Screws.** Height of Case, 50 Ins. Diameter, 24 Ins.

Each

No. 112—Wt., Each, Abt. 300 Lbs..... $54.00

CASE AND BASE, COMPLETE

Base is 20 Ins. Square, 20 Ins. High and Contains 18 Drawers. Upper Case has 112 Boxes, 56 for Bolts and 56 for Screws. Height, Over All, 70 Ins.

Each

No. 120 - Wt., Each, Abt. 480 Lbs. $67.00

No 112 Cases Leave the Factory Labeled as Follows

Washers, 1/4, 5/16, 3/8, 1/2.
Bolts, 1/4x1, 1 1/4, 1 1/2, 1 3/4, 2, 2 1/4, 2 1/2, 2 3/4, 3, 3 1/4, 4, 4 1/2, 5.
Bolts, 5/16x1 1/4, 1 1/2, 2, 2 1/2, 2 3/4, 3, 3 1/4, 4, 4 1/2, 5, 6.
Bolts, 3/8x1 1/2, 1 3/4, 2, 2 1/2, 3, 3 1/4, 4, 4 1/2, 5, 5 1/2, 6, 7, 8.
Bolts, 1/2x2 1/2, 3, 3 1/2, 4, 4 1/2, 5, 6, 7, 8, 9, 10, 11, 12.
Screws, 1/4—3, 4, 5 (in One Drawer).
Screws, 1/4—3, 4, 5, 6.
Screws, 1/4—4, 5, 6, 7.
Screws, 1/4—5, 6, 7, 8, 9.
Screws, 1/4—6, 7, 8, 9.
Screws, 1 7, 8, 9, 10, 11
Screws, 1 1/4—8, 9, 10, 11, 12.
Screws, 1 1/4—9, 10, 11, 12, 13, 14.
Screws, 1 1/4—11, 12, 13, 14.
Screws, 2 —11, 12, 13, 14.

This Leaves 14 Small Drawers with Blank Labels, which can be Used for Tire Bolts or Stove Bolts, Etc.

No. 120, Case Labeled as Above, with the Following Added in the Base:
Washers, 1/4, 5/16.
Bolts, 1/4—5, 6, 7, 8, 9, 10, 11, 12.
Bolts, 1/4—7, 8, 9, 10, 11, 12, 14, 16.
Labels Can Easily be Changed to Suit Your Own Selection

Not Carried in Stock. Can Only be Furnished by Shipping Direct from Factory in Tens.

BRUNNER MOTOR DRIVEN COMPRESSORS

POWER PLANT

Users have been attracted by the two-stage type of Compressor for garage service; they have not, however, been pleased with mechanical crudity of other makes. This two-stage is superior in design and infinitely finer in construction than any competing outfit, and costs no more to purchase.

General design and arrangement is exactly similar to all other Brunner belted power plants. The Compressor and motor may be shifted for alignment, while the belt tension and travel is controlled by the improved Brunner belt-tightener. An automatic unloader-controller is securely mounted, with air-tight joints throughout. Every feature makes for quiet, automatic, attention-free service, and owners may well be proud of this finest of all two-stage power plants.

Automatic ¾ H. P. Power Plant with Brunner Two-Stage Compressor displacing 3 to 4½ cu. ft. depending on speed. Low pressure cylinder 3 in. × 3 in. High pressure cylinder 1¾ in. × 3 in. Connecting rod assembly same as in V-type aeroplane motors, eliminating ruinous vibration and annoying thumping of the usual two-stage machine. Intercooler with knife-edge fins holds four discharges of low stage cylinder.

No. F99—Dimensions: Height 22 in., width 17 in., length 45½ in., with ¾ H. P. motor; completely equipped with outlet for 1 in. iron pipe, shipping w't 420 lbs.

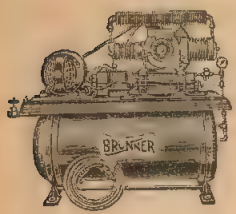
With 1-Phase A. C. 110 220-Volt 60-Cycle Motor★	$280.00
With 1-Phase A. C 110-220 Volt 25-Cycle Motor★	325.00
With 1-Phase A. C. 110-220-Volt 40-Cycle Motor★	325.00
With 110 Volt Direct Current Motor★	310.00
With 220-Volt Direct Current Motor★	310.00

Motors for other circuits at corresponding prices.

No. F991 Power Plant—With 1 H. P. motor and capacity of 4 cu. ft. per minute.

With 110-220 V., 60 Cy., 1 Phase, A. C Motor★	$330.00
With 110 220 V., 25 Cy., 1 Phase, A. C Motor★	365.00
With 110-220 V., 40 Cy., 1 Phase, A C. Motor★	365.00
With 110 V., Direct Current Motor★	340 00
With 220 Volt Direct Current Motor★	340.00

ASSEMBLED UNITS



The Model No. F939 is a fast-working ¾ H. P. unit. Pressure in the 32-gallon tank rises from zero to 175 lbs. in less than twenty-five minutes. A pressure rise of 25 lbs. is a matter of five minutes or less. The answer is not excessive speed; it is the astonishing efficiency produced by dual valves, larger intercooler and snugly fitted, polished pistons.

Equally good proportional results are had with the larger models Nos. F949 and F969. The first of these mounts the same Compresser, but with 1 H. P. motor, and with 45-gallon seamless steel air tank. The No. F969 also uses the same Compressor and 1 H. P. motor, with a 65-gallon seamless steel tank. Pressure rise is produced in about equal time by all three units, as the Compressor is proportionately speeded to tank size in each case. It is obvious that the smaller unit has the longer life, but the larger assemblies, running at higher speed, are nevertheless in great favor with oil stations and other busy establishments. Long life seems not so vital when parts are so quickly and cheaply replaced.

The outfits are completely equipped as illustrated.

CAR PUSHERS

EASY

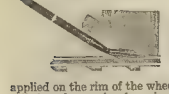
Japanned, solid steel bar, tempered at points; malleable iron heel with extended lugs to prevent slipping; finest tool steel triangular bit, grips rail firmly and prevents slipping back. Bit can be inverted and all three sides used. Steel spring prevents bit touching rail when not in actual operation. Each

No. 15 —Length 5⅝ ft with extra triangular bit; wt each 20 lbs $13 50

No. 15B—Extra bits; wt each ½ lbs 81

Packed loose.

ATLAS



Japanned malleable iron frame and socket; finest tool steel square heel, can be inverted and all four sides used. Selected maple handle, varnished.

By the compound lever arrangement the moving power is applied on the rim of the wheel so far from its contact with the rail that the moving force is utilized to roll it forward, instead of wasted in an effort to raise it from the track. Each

No. 10—Length over all 67 ins; complete with handle; wt each 15 lbs $16 50

Per Pair

No. 10B—Extra bits; wt each ¼ lb 1 20

Packed loose.

BUDA HAND CARS

BUDA FOUNDRY AND MFG. CO.

Helical Cars.

Unless otherwise specified hand cars will be furnished with helical gears. The teeth are cut in a diagonal manner creating a continuous rolling contact.

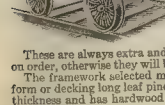
Taper Wheel and Pinion Fit—Furnished with the improved taper fit on wheels and pinions, unless otherwise desired. If straight fit is preferred, this fact should be specified when ordering.

Framework—Specially selected maple, thoroughly seasoned. Platforms or decking is of long leaf pine dressed on both sides to uniform thickness. Each

No. 1—Buda standard hand cars, standard gauge, platform 6 ft long by 4 ft 5 ins wide; axles 1½ ins in diam; wheels 20 ins in diam: wt 525 lbs ..... ✣$288 00

HARVEY PUSH CARS

BUDA FOUNDRY AND MFG. CO.



Pressed steel wheels taper fitted to axles, unless straight fit is specified on order. These cars can also be furnished with insulated axles for use on roads using block systems with track circuits. These are always extra and cars so desired should be specifed on order, otherwise they will be shipped without insulation.

The framework selected maple thoroughly seasoned. Platform or decking long leaf pine, dressed on both sides to uniform thickness and has hardwood end rail at each end, bound with iron strap. Each

No. 4—Standard gauge, platform 7 ft. long by 5 ft 6½ ins wide; axles 1½ ins. in diam; wheels 20 ins in diam; wt 850 lbs ..... ✣$225 00

✣F. O. B. Illinois Factory Only.

MINE CAR TRUCKS

PLAIN BEARINGS

Plain bore wheel with an oil recess around hub. designed for small cars of country mines. Set consists of 4 wheels and 2 axles.

Per Set

No. 1—Diam wheels 10 ins; 1½ in. square axle ..... ✣$84 00

"Now, Willie," said father,

"the trick is . . . to get this wheel together again!"

A SKID—a crash—and another wooden wheel crumples into kindling wood

Then the day's pleasure takes wing—and so do quite a flock of dollars. For a ruined wooden wheel means a new one at $20, a towing charge of $7 and about six hours' time

But Budd-Michelin Wheels have the strength of steel. They can't collapse. If one does bend under a blow that would wreck a wooden wheel, it does not mean tragedy—just changing to the fifth Budd-Michelin that rides on the back of the car. And the bent wheel can be made as good as new again for $3!

The man who rides on Budd Michelins saves money and dodges the tow car. Don't let your prospects forget it!

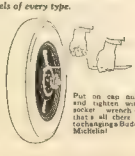
BUDD

WHEEL COMPANY . . . *Detroit*

Budd Service Stations in all principal cities—parts and service for wheels of every type.

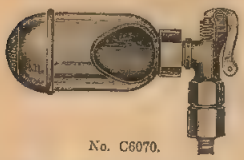
To put on a Budd-Michelin Wheel, set brakes and place wheel in position before the mounting studs

Slip pilot bar through top mounting hole and over top mounting stud. Lift up and wheel slides into place



Put on cap nuts and tighten with socket wrench—that's all there is to changing a Budd Michelin!

BUELL EXPLOSION WHISTLES



No. C6070.

No. C6071.

A powerful, practical and perfect warning device, fits in priming cup opening, thereby getting the explosion direct instead of through the exhaust valves. It can be installed on practically all cars without any other parts. On engines not fitted with priming cups such as the Ford, it is necessary to use our No. C6072 special spark plug which has an opening on the side to accommodate the whistle.

No. C6070—Single tone, whistle complete, ready for installation, w't each 1 lb .....each $6.65

No. C6071—Chime tone, whistle complete, ready for installation, w't each 1 lb.....each $8.90

No. C6072—$\frac{3}{8}$ in. **Special** Spark Plug for use on engines not having priming cups, w't each 10 oz., extra, each $1 45

ONE IN A BOX

APCO THROTTLE EXTENSION HORN BUTTON

For Ford drivers who like a horn button at their finger tips constantly. It slips on the gas or spark throttle lever where the fingers always rest.

It has a double advantage of being a throttle lever extension where larger diameter wheels are used.

This button is the only satisfactory horn button for use with the lock free type of steering wheel. It can be installed in five minutes.

No. C7120—9—Packed in individual containers; ten buttons to a counter display carton, we do not break cartons, w't three ounces, per carton of 10.....$7.75

APCO DELUXE HORN BUTTONS

An attractive large size Horn Button, rubber composition, red in color, attached to a nickel plated steel nut, which replaces the present nut used to hold on the steering wheel.

This puts the horn control in a convenient and accessible position, the same as on all large cars.

Cord is the proper length to permit easy installation, merely by attaching the two wires from the horn button to the two wires in the present horn button on your car.

No. C7123—35—W't per card of 10, 3 lbs.....per card $10 90

10 ON A COUNTER DISPLAY CARD. WE DO NOT BREAK DISPLAYS

APCO STEERING POST HORN BUTTON

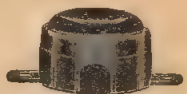
The regular horn button on a Ford car is placed at an inconvenient point. This Button takes the place of the nut on the steering column post in the center and on top of the steering wheel. It can be installed in five minutes.

No. C7121—138—Beautifully finished; the shell is of non-rusting alloy, the nut is black and is Parkerized; will not rust, the contact springs are of phosphor bronze and the button is of hard black composition; packed in individual boxes, ten to a counter display carton, w't two ozs., per carton of ten.....$4.45

WE DO NOT BREAK CARTONS

HORN BUTTONS

The Universal Button is just the thing for your desk, door bell or any place you have the need of a push button. The entire top is movable so when it is pressed at any point the contact is made. The button shell is finished in black enamel, and top is a black composition, making a neat and attractive article.



No. C7118—W't per doz. $\frac{3}{4}$ lbs., per dozen $5.35

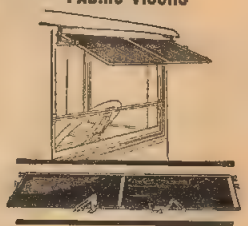
This is the steering spider column button. Equipped with clamp to permit fastening the button to the steering spider.

No. C7119—W't per doz. 1 lb., per dozen $7.10

ONE IN A BOX

FOR KINDRED GOODS SEE PAGE 2160

FABRIC VISORS



Equipped with Steel Frames, top side, covered with black grained art leather and lower side is covered with Green art leather. This Shield is adjustable to any angle and can be quickly removed.

Brackets finished in Black Enamel. Visor does not attach to windshield proper, but to body of car.

No. C7365—For Closed Cars, length 40 in., width 10$\frac{1}{2}$ in., w't 3$\frac{1}{2}$ lbs.....each $3.65

No. C7366—For Open Cars, Fords and Chevrolets especially, length 39 in., width 10$\frac{1}{2}$ in., w't 4 lbs., each $4.00

Higher Compression Ratio Features New Hudson

A RADICAL departure in cylinder head design features changes in the Hudson line, announced this week by the Hudson Motor Car Company. The new head has one of the highest compression ratios of any car on the market at present, but is designed to operate without the use of anti-knock fuels

A number of external changes in the cars have also been made, including the extending of belt moldings over the hood and cowl, new color schemes, and the incorporation of a metal side panel in the roof on the custom line.

In the new head, the relative positions of the exhaust and intake valves have been changed so that the 1⅞-in. intake valve which is located in the head slightly overlaps the exhaust valve in the block. Fuel entering the combustion chamber thus strikes the exhaust valve, which being the hottest portion in the head acts as a hot spot to vaporize any fuel still in liquid form. The incoming fuel also acts as a cooling medium for the exhaust valve in this respect. Over about half the piston area there is no recess in the head, and the clearance of the piston under this portion is therefore equal to only the thickness of the gasket between head and block, this type of design being largely responsible for the small combustion chamber volume obtained with this "F" head engine.

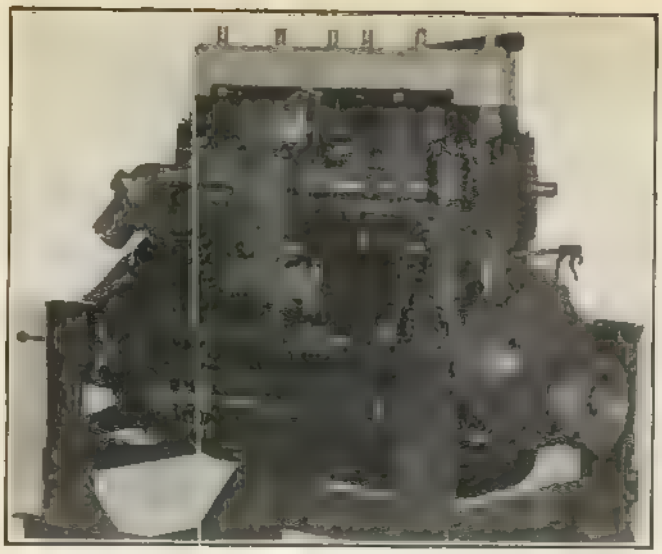
To prevent "knocking" in the engine, the spark plug has been moved to the far exhaust side of the combustion chamber, where it is located in the cylinder head side wall. With this arrangement a fairly small combustion space has been formed over the exhaust valve, in which firing of the fuel first occurs. Any detonation which might occur, is thus said to be absorbed in this part of the combustion chamber, before the flame reaches the area over the piston. No changes have been found necessary in spark plug design in spite of the high compression ratio now used.

Invar Strut Pistons

Further changes in the engine include the adoption of Invar strut three-ring pistons, and the adoption of a crankshaft torsion neutralizer at the front end of the shaft. The intake manifold has also been redesigned. The manifold rises vertically from the carburetor, this portion including the exhaust gas pre-heater. At the top it makes a right angle turn into the head, through a single port, from where it is distributed through cored passages in the head to the various cylinders.

As would naturally be expected, the engine changes and the new type of head have improved the performance of the Hudson. This is most noticeable in a quicker get-

Full length belt mouldings are utilized on the latest Hudson bodies



Latest Hudson engine showing new inlet manifold, torsional damper, and new location of spark plugs

away and more rapid acceleration, while fuel economy and top speed, it is claimed, also have been increased.

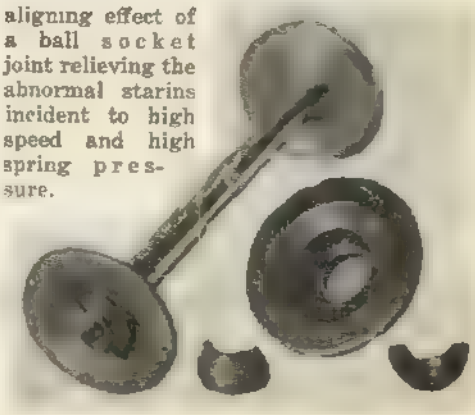
Incorporation of a small metal panel in the side of the roof on Hudson custom line cars, has given these cars an "all-metal" appearance from the side. All models are continued at the same prices as formerly.

AUBURN SETS STOCK CAR RECORD

Above picture shows the cars lined up for 100 mile stock car race held July 4th on the Rockingham board speedway at Salem, New Hampshire. The race was won by Wade Morton driving a stripped stock Auburn 8-88 roadster. Second place was annexed by Frank Lockhart in a six-cylinder stock supercharged Mercedes of over 300 cu. in. disp acement. Average speed of the winner was 89.17 m. p. h. a record for the distance for stock cars competing under the recent A. A. A. rules. The race was run under the personal supervision of Val Haresnape, Secretary of the Contest Board, American Automobile Association. The field consisted of two Auburns and the Mercedes which although over the displacement limit was allowed to start, the 300 inch rule being waived by the Auburn drivers.

Elliott Valve Spring Retainer

Frank Elliott well known recing driver and his brother C. V. Elliott of 331 E. 33rd St., Los Angeles, have secured patents on an improved valve spring retainer and lock assembly. The invention as illustrated herewith has been in use for more than a year by about 75 per cent of the big circuit A. A. A. drivers on a royalty basis in their Miller built race cars. The assembly incorporates a turned lower washer with a semi-spherical seat in which the two correspondingly ground half locks ride. The locks are provided with double internal ribs which engage the valve stem and when assembled the combination gives the self aligning effect of a ball socket joint relieving the abnormal starins incident to high speed and high spring pressure.



Additional Details on New Auburn Models

By A. H. Packer

ADDITIONAL details on the new six and new eight-cylinder Auburn chassis models which were described briefly in the November, 1926, issue of the AUTOMOBILE TRADE JOURNAL have been recently released by the Auburn Automobile Co. In addition to the two new chassis the large eight is continued, with a number of refinements which contribute to greater power and better performance.

The prices on all models in the line are tabulated below.

Model 6-66	
Roadster	$1095
Sport sedan	1195
Sedan	1295
Wanderer sedan	1345
Model 8-77	
Roadster	$1395
Touring	1445
Sport sedan	1495
Sedan	1695
Wanderer sedan	1745
Model 8-88	
Roadster	$1995
Touring	2045
Sport sedan	2095
Sedan	2155
7-passenger touring	2295
7-passenger sedan	2595

One of the features of the new line of cars which embody the characteristic Auburn belt line which slopes over the hood as it approaches the radiator is the monocontrol for the Brewster type windshield. This shield, with its slanting glass, gives vision undisturbed by annoying reflections. The range of visibility is increased due to its extreme width.

Fenders on all models are of the full crown type, unusually deep, the actual depth dimension being 4 9/16 in. The apron portions also have unusual fullness which permits extending them forward to within a few inches of the front line of the fenders. This gives the radiator protection from mud splashed by the front wheels.

All cars are provided with rear view mirrors and automatic windshield wipers. On the 8-88, Lovejoy shock absorbers are used all around. On the 8-77, Gabriel snubbers are used all around while on the 6-66 they are supplied at the front. To facilitate attaining smooth operation at high speeds, all cars have engines provided with vibration dampers at the front.

Four-wheel brakes and Columbia axles are continued, but the brake shoes are now

Above: Auburn 6-66 sedan. Lower: The 8-77 five-passenger sedan

stampings of steel. To give equal action on the front brakes when rounding a curve, a short equalizer at the front axle is provided. There is also an equalizer at the pedals which gives an approximate 60-40 division between rear and front brake application. There is no equalizer at the rear brakes, however, and the construction of these is conventional, the external contracting type of brake being used. The equalizer at the pedals has a special construction which limits its action so that if one set of brakes should become inoperative the other set would still function. On the eight-cylinder cars the emergency brake handle is on the instrument board, while on the six-cylinder cars it is in the conventional position at the side of the gear shift lever. In all models the emergency brake operates on a drum at the front of the propeller shaft.

The new model 6-66 is built on a chassis which has a wheelbase of 120 in. and is powered with a Continental engine which has a bore of 2⅞ in. and stroke of 4¾ in. The frame stock is 5/32 in. and the channel depth is 6 in., seven cross members being used. The Long model 8F clutch is used with a Nice throwout bearing. This bearing is lubricated from an oil cup mounted at the upper edge of the toe-board. The Warner transmission, a unit with the engine, has ratios of 3.07, 1.77 and 4 to 1 in low, second and reverse respectively.

The engine in the model 6-66 uses chain drive for the camshaft and generator, the ignition unit being driven from the generator. There are four crankshaft and four camshaft bearings, lubrication being by pressure to main, connecting rod, and camshaft bearings and splash to the piston pin which has its bearing in the rod. The fan and water pump are in one unit, driven by a V type belt. The starter uses Bendix drive to the flywheel. Remy electrical units and U.S.L. battery are employed.

The new model 8-77 is built on a chassis having a wheelbase of 125 in. It uses a model G Lycoming engine which has a 2⅝-in. bore and 4¾-in. stroke. Other features of the 8-77 chassis are similar to those of the other Auburn models. The engine is said to develop 77 hp. and make possible a maximum speed of 75 m.p.h.

On the big eight, which is model 8-88, the power of the Lycoming model 4 H. M. engine has been increased by several changes. The iron pistons have been replaced with Bohnalite with the invar strut. Connecting rods instead of being steel are now made of duralumin. The valve lift has been increased 1/32 in. and the contour of the cams changed so that no heavier valve springs are needed. These changes have boosted the peak speed from 2800 to 3200 at which point it now develops 90 hp. by actual dynamometer test. In actual use in the car the peak speed is 3960 r.p.m., which represents 80 m.p.h.

The timing chain has been changed from ⅝-in. pitch to 0.4-in. pitch. The radiator core has been thickened ¼ in. to provide additional cooling and a 1⅛ in. instead of a 1¼ in. model S Schebler carburetor is now used. The Ross steering gear has also been changed from model C to model R, the largest gear of this make made for passenger car usage.

The Swan manifold has a larger exhaust passage to balance the larger carburetor and to get the best possible ignition performance at high speed the four-lobe cam distributor with double breakers is employed. A Bishop and Babcock thermostat is built into the upper water outlet connection at the cylinder head, now constructed with combustion chambers having greater turbulence characteristics.

The 8-88 now carries 19-in. wheels which replace the former 20-in. wheels. With this change the gear ratio in the rear axle has been changed from 4.63 to 4.5 for the closed cars while the open cars use a 4.25 ratio. Wheels are now balanced which offsets any tendency for the front wheels to shimmy. Where wire wheels are ordered instead of the wood wheels which are regular equipment, the wheel size is made 18 in. and 30 by 6.75 tires are used. The regular tires are 31 by 6 in.

Other features of the big eight are the use of a PurOlator on the engine, leather covers or spats on the springs and the carrying of the spare tire in a well in the front left fender. This feature applies on the roadster and sedan, while on the sport sedan the tire is carried at the rear.

In the finishing of the model 8-88 the fenders are lacquered to match the bodies. In the interior there are two smoking sets in the rear compartment, one at each side, while the cigar lighter is in the center of the roof so that it can be reached with equal facility by occupants of either the front or rear seat.

Pontiac Marine Engine

In a new model of marine engine marketed under the trade name of the "Gray Six Forty" by the Gray Marine Motor Company, Detroit, the major units of a Pontiac Six automobile powerplant are employed.

The Pontiac engines supplied to the Gray company by the Oakland Motor Car Co. are shipped minus manifold, transmission, clutch, carburetor and distributor.

ATWATER KENT RADIO

1928

An Announcement by

A. ATWATER KENT

IT IS only right that purchasers should share in the results of up-to-date manufacturing methods. This is the tendency of the times.

In our 15½ acre factory our production engineers and other experts, since the inception of radio, have been working out manufacturing economies, possible only with operations on a large scale.

These advancements have enabled us not only to maintain but constantly to improve the quality of Atwater Kent Radio.

Therefore the public will receive the benefits of a 20 per cent average reduction on all our radio products, beginning immediately.

The new prices are in keeping with the long established Atwater Kent policy of sharing with the public the results of economies as fast as they are put into practical operation.

More and More

There never has been in the history of the automobile industry public acceptance of a product such as that accorded to Chrysler.

We have indicated on these pages the growth from year to year. It is safe to assume that the 1928 record will be just as phenomenal.

And more and more Chrysler dealers are needed to take care of the ever-increasing demand for Chrysler cars.

Today there are four complete lines of Chryslers covering every principal price field from $725 to $3595. Practically everyone in your community is a prospect for some Chrysler. No matter what conditions may be, you can be sure of selling Chryslers all the time. This would not be so if you were held to a single line or perhaps a couple of lines. To duplicate the Chrysler business you would have to be signed up with a number of factories operating under a variety of different policies and committed to a terrific expense for sales and service facilities which the simple Chrysler sales agreement eliminates entirely.

During the past sixty days hundreds upon hundreds of dealers have been added to the Chrysler organization.

There are still a few openings left. Don't YOU overlook this opportunity to share in the prosperity of Chrysler.

If you handle another line, you must realize that you are steadily and surely seeing more business go to this progressive line. Don't fight it—*join it.* There's no profit in opposing a winner. Join it, and BE one.

The 1927-1928 Chrysler sales agreement

9th in 1926

18th in 1925

27th in 1924

WIRE, WRITE

CHRYSLERS

? in 1928

4th in 1927

represents an opportunity which we candidly believe is without equal in the industry.

It is possible for a Chrysler dealer to sign up only for the Chrysler "52" and yet to have the other models—"62," "72" and Imperial "80"—available at call without any definite commitment except for the "52."

Can you imagine what a tremendous advantage this most unusual franchise gives you?

No need to stock the full line—no need to display the full line.

It will pay you to find out all the details of this Chrysler agreement.

Send in the coupon and we will be glad to give you all the information, holding your inquiry in strictest confidence.

NOW this family
can have its own car
This is a famous drawing by a famous artist. It was made some years ago. Today any family entitled to credit may have its own car and pay for it through the GMAC Plan.
When time payment became an accepted form of car purchase, General Motors instituted the GMAC Plan to make sure that the sale of General Motors cars on credit would be in accord with sound credit principles and the best interests of the car buyer. GMAC rates have always been low; and the last reduction has saved General Motors' customers more than $12,000,000.
General Motors' line includes "a car for every purse and purpose," a suitable model for every income. And every sale under the GMAC Plan assures a transaction that will hold good will.

GENERAL

This is a two-car country

COUNTRIES prosper when their people are able to make most effective use of time. The American man learned years ago to put a high value on his time. He bought the first millions of automobiles.

Today at least half of the automobiles are being bought for the American woman. She too wants miles reduced to minutes, and her horizon pushed back beyond the borders of her town. So America is fast becoming a two-car country.

The General Motors line provides every combination of automobiles that any family can want. Cars for touring and cars for running about; every type and model; a car for him and a car for her, *all* of General Motors quality but adapted to every purpose and to every purse. All may be bought on the low-cost GMAC Plan.

MOTORS

"HELLO, Uncle Ben!"

Uncle Ben works on the railroad, but he works for General Motors too. For General Motors is one of the railroads' largest customers. Last year it paid in freight bills $74,000,000, much of which the railroads passed on, as wages, to their 1,800,000 employes.

So all businesses are linked together. Money that you pay a dealer in your town for a General Motors car comes back to the town in many different ways. Every family, whether dependent on a railroad, a farm, a factory or a professional office, shares in the prosperity of every industry in the land.

New Peaks
of speed, power and safety

Super-Six Principle now released to

For more than four years development has been concentrated on an automobile that now easily tops any accomplishment thus far known.

There is nothing with which to compare it in performance, stamina, safety, and economy of operation. It has comforts that are now absent in even the costliest of cars. It has a beauty in line and appointments comparable with the richest and most exclusive custom-built cars.

The possibilities of the Super-Six principle have long been known to automobile engineers. But patents have kept others from its use, and we were unwilling to release its capacity faster than a car could be developed that in every particular adequately matched the smoothness, power, and stamina of the motor.

Nearly one million cars embodying this principle have been built; and, although the full possibilities have been held in check, they have proved what may be expected of this new car.

Tests of a stock chassis under official observation established the record of 102.53 miles per hour. But speed was not so much sought for as was the ability to maintain any wanted speed for any length of time with complete comfort and safety to driver, passenger and car.

That meant a chassis comparable to such a motor. It meant a body suitable in beauty, finish and comfort to such pre-eminent performance.

To build such a car in sufficient quantities as

SHOWN FOR THE FIRST TIME AT THE

HUDSON

Custom Built Models: ROADSTER • PHAETON • BROUGHAM • 5-PASSENGER SEDAN • 7-PASSENGER SEDAN
Standard Models: COACH • SEDAN

long held in check its full capacity

its merit commands, and at a price that will give it widest sale, required the investment of millions of dollars in buildings and equipment. That program is now completed. And the car will be exhibited for the first time at the New York Automobile Show beginning January 8, 1927. It will be shown at all subsequent automobile shows, and later by dealers everywhere.

Also in an Essex Super-Six—

At a Price Within the Reach of Millions

The development of the new Hudson just described led, also, to the creation of a smaller automobile—a counterpart in general appearance, in smoothness, comfort, quality, easy riding, and safety. It is the Essex Super-Six.

It, too, has stamina. It is capable of 50 miles an hour all day long if you want that, yet that is far below its maximum speed. It has great flexibility. It is economical and requires the minimum of attention. The bodies are in keeping with its chassis—beautiful in line, finish, upholstery, fittings, and color. To those who require two automobiles, it makes the ideal companion of the larger. Throughout, it matches in material and workmanship the standard set in the larger car.

The smaller model will sell at little more than you pay for any "four". It, too, will be exhibited for the first time at the New York Automobile Show.

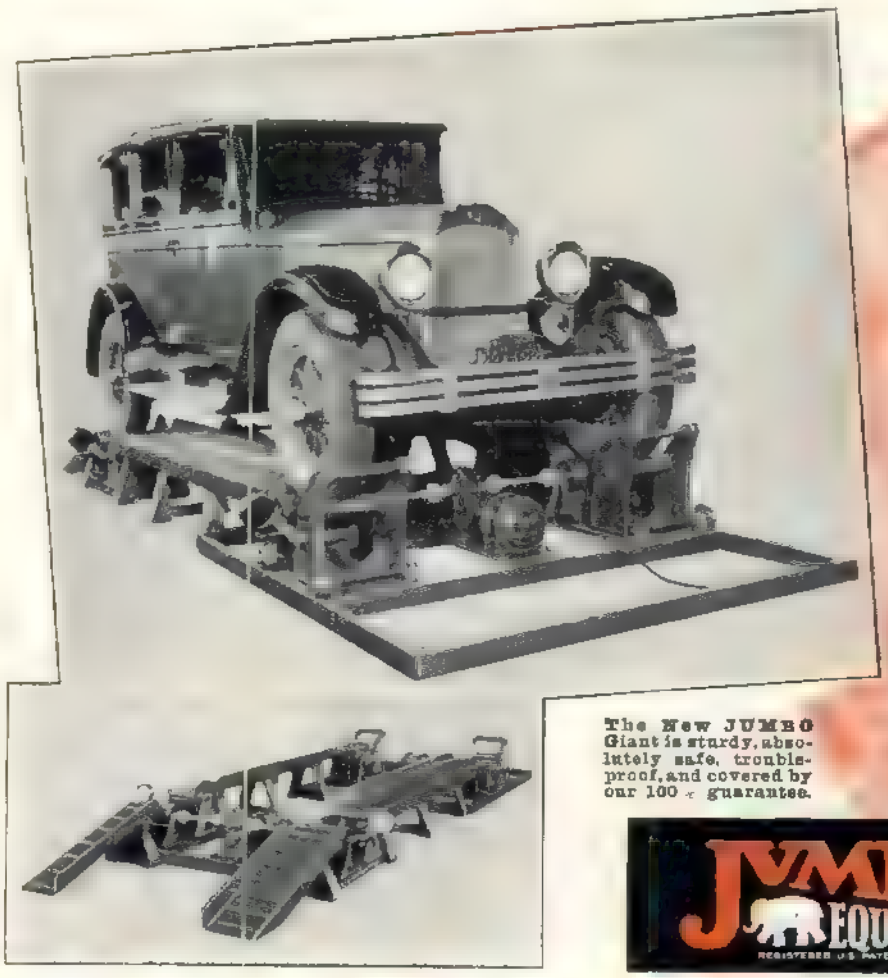
The Greatest Benefit to the New Jumbo Four Wheel



The New JUMBO Giant is sturdy, absolutely safe, trouble-proof, and covered by our 100% guarantee.

JUMBO EQUIPMENT
REGISTERED U.S. PATENT OFFICE

Industry Since 4 Wheel Brakes

Giant Brake Tester

The talk of the times is "brakes." Many states require periodic inspection and perfect adjustment. Such laws are rapidly spreading. The New JUMBO Giant is thoroughly up-to-the-minute—quick, convenient, accurate, profitable. A great business builder.

- makes your shop "Brake Headquarters"
- attracts a constant stream of new business
- can earn $10,000 and more per year for you
- pays for itself in 90 days

Brake adjustment is today's most important factor in motoring safety and enjoyment
The ONLY way to insure perfect braking is with accurate mechanical equipment not guesswork. Perfect braking means correct balance between front and rear brakes, and properly equalized right and left.
The JUMBO Giant Brake Tester accurately shows the relative braking power on each wheel and on all four wheels at once. It makes perfect adjustment quick and easy.
Each four wheel test and adjustment takes 30 to 40 minutes including rounding up the bands, freeing the equalizers, checking cotter pins, cleaning and lubricating all brake mechanism.
You can make 15 to 18 such adjustments daily, and these will produce 3 to 4 relining jobs besides other service work that pays you good money.
You can see that the New JUMBO Giant quickly pays for itself—and after that this profitable business is "velvet."
Lower in price. Partial payments may be arranged.
Be the first in your locality to offer this Super-Service. Send the coupon for the whole story.

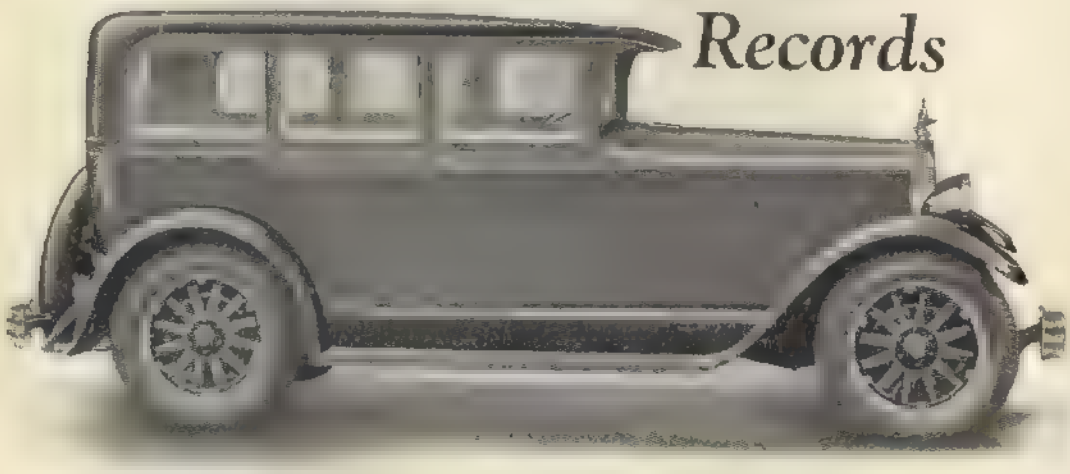
LONG VELIE LIFE

Such luxury! Such Price! Setting Sales *Records*



Model 60—Fully Equipped, $1585, F. O. B. Factory

SILENT POWER

Motor and Axles by Velie. Vibration is absolutely eliminated at all speeds in this great motor with its over-strength crankshaft

Velie dealers know how motorists welcome the luxury of tremendous power, delivered with absolute *silence* by this Velie-built motor. It is this quiet power, with its extreme ease of operation and dependability, which is making sales records and most attractive profits—for Velie distributors.

In the above, Model 60, the powerful Velie motor is even greater in speed and power. Flexibility and acceleration are increased. Vibration is reduced to the vanishing point by an inbuilt feature of the motor itself—not by a complicated added device or a neutralizer.

Remember that the Velie line is Velie made, not assembled. Long life is in every part.

BEAUTY

Bodies by Velie

The luxury of Velie power and silence is more than matched by the sheer beauty of its aristocratic body and interior appointments, which attain a practical refinement of luxury from the beautifully planned exterior to the charmingly distinctive interior details which make proud owners.

Graceful lines, low center of gravity, 4-wheel brakes and balloon tires go hand in hand with deep, low seats, special harmonizing mohair, and a wealth of comfort giving appointments.

—and of all Velie surprises the customer is most delighted with the modest price.

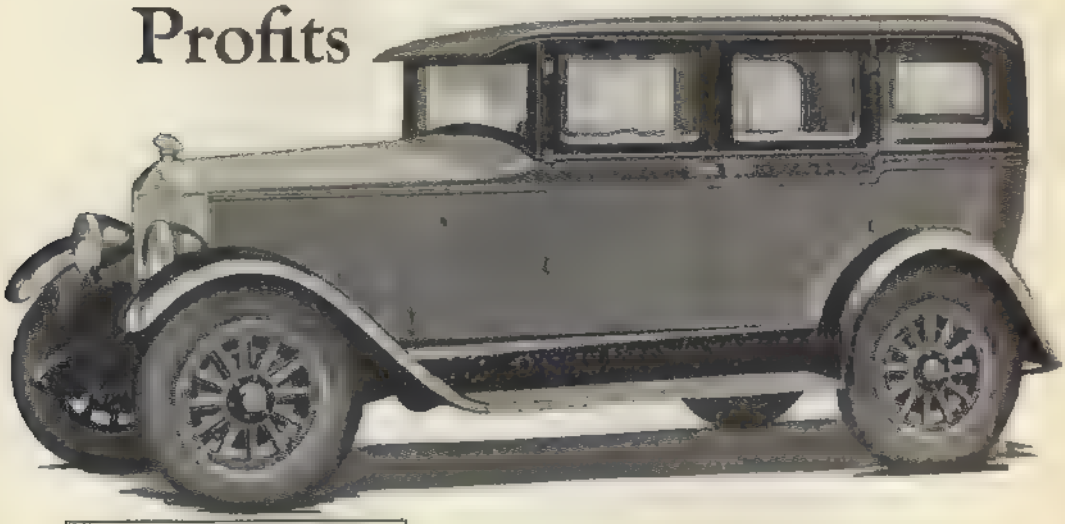
Never before has the Velie franchise been so valuable

VELIE MOTORS CORPORATION

MOLINE, ILLINOIS

LONG VELIE LIFE

Value! Beyond All Competition—Real Profits



Showing the "Show"

At the New York show the Velie Line with this Sedan at $1045, stood out sharply as *the greatest value in its price class.*

Comment was freely made that a car of such beauty, performance and economy would be expected to sell for $300 more *at least!*

What an advantage to holders of the Velie franchise! How competition dwindles in the face of such features as those listed at the right!

Completing the Velie line, this remarkable Sedan makes the Velie proposition one of unmatched possibilities. And the Velie franchise is *different*—a business of your own.

Velie builds two lines—standard six Sedans and Coupes, 112-inch wheelbase, $1045 up—special six Sedans and Coupes, 118-inch wheelbase, $1450 up.

PROFIT FEATURES

Found in No Other 6-Cylinder 4-Door Standard Sedan, 56 Inch Tread at Its Price

1. The most powerful car at its price.
2. Only valve in-head motor in any car priced under $1200.
3. Only motor with forced pressure lubrication to the valve mechanism.
4. The strongest construction.
5. Only motor with Lanchester type vibration dampener.
6. Only radiator capacity of 4¾ gallons.
7. Only four-wheel hydraulic brakes.
8. Only car with heat indicator on the dash.
9. Only car with 182¼ inches of spring equipment.
10. Lowest cost—price and weight considered

Weaver Towing Pole

Provides a safe connection for towing in disabled cars, rigid to prevent smash-ups on sudden stops—yet hooks on each end provide ample flexibility to prevent bending pole when turning corners or towing on rough roads. Heavy coil spring also absorbs shocks of sudden starting and stopping. Two jaw-type clamps can easily be attached to front or rear of any car. Can also be pulled or pushed as conditions necessitate. Length of pole adjustable.

TOWING *and* RESCUE SERVICE

Pays you

WEA

WRECKING

Wemer Auto Crane

The biggest money maker you can put on the payroll. Takes little room in the body of the service car. Light but husky timber to handle loads to 6,000 pounds. One man standing in truck or on the ground, can easily raise or lower boom to the desired height—even with the load suspended—by blocking boom. Makes towing a one man job. Swivel boat permits side pull without chain binding. Lattice truss accommodates 50 ft. of chain or 200 ft. of cable. Boom presents kinking. Equipped regularly with 50 ft. of ⅜" 3-B chain or 50 ft. of ½" cable.

New Cars and Models

1000 hp. Car Will Try for New World's Record

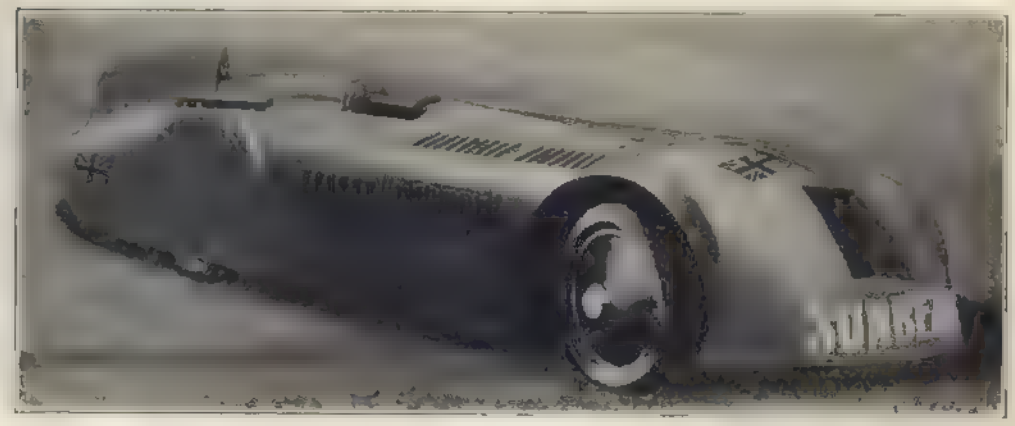
A WORLD'S record of 200 miles an hour or better is the goal Major H. O. D. Segrave, veteran British driver, hopes to attain with the 1000 hp. Sunbeam racing car when he pilots this creation over a specially constructed course at Daytona Beach, Fla. The car has a theoretical maximum speed of 220 m.p.h. He will be timed under the supervision of the Contest Board of the American Automobile Association

The record at Daytona Beach, of 157 m.p.h. was made in 1921 in a Duesenberg car of only 583.8 cu. in. piston displacement, driven by Tommy Milton. Major Segrave made a record of 149.328 m.p.h. at Pendine Sands, Wales, in a 12-cylinder Sunbeam. A year ago J. G. Parry-Thomas, another British driver, who was recently killed, attained a speed of 170.62 m.p.h. In February of this year, Capt. Malcolm Campbell was officially clocked at Pendine Sands at 174.2 m.p.h.

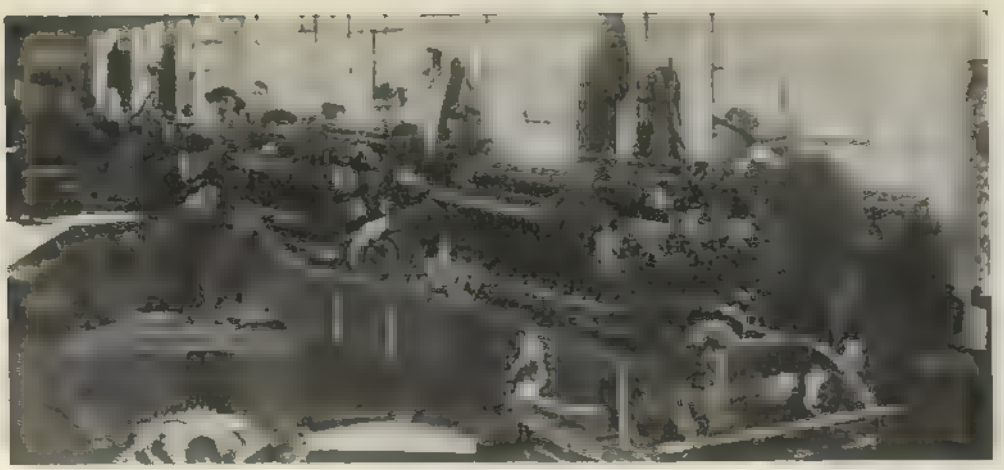
The car has two 12-cylinder airplane engines, one in front and the other over the back axle. Each of these engines develops 500 hp. at its normal rate of rotation, viz., 2000 r.p.m., though if necessary a higher speed and an increased output can be secured.

These engines have their 12 cylinders set in two rows of six at an angle of 60 deg. Each cylinder has four valves and there are four overhead camshafts for each power unit. The bore and stroke are 122 x 160 mm. (approximately 4 13 16 by 6 5/16 in.) so the piston displacement of each engine is, roughly, 1380 cu. in., or 2760 cu. in. in all. There are four six-cylinder polar-inductor magnetos for each engine and two Claudel carburetors with compressed air feed.

The chassis frame consists of two massive side rails of pressed steel 4 mm. thick, nearly 2 ft. in depth at one point and over 14 in. deep throughout the greater part of their length. The side members extend well behind the rear axle, the extreme end carrying a gas tank with a capacity of 33 gal. At the front there are dual dumbirons on each side, one unit curving down from the top of the frame and the other curving up from the bottom, the two meeting in a bracket on a stout tubular section cross member. Through the beetle horn front ends of the frame thus arranged, the



Major Segrave's 1000 hp. Sunbeam with two 500 hp. 12-cylinder engines



Sunbeam sprint car with body removed. Note the massive frame side rails with double spring horns at front

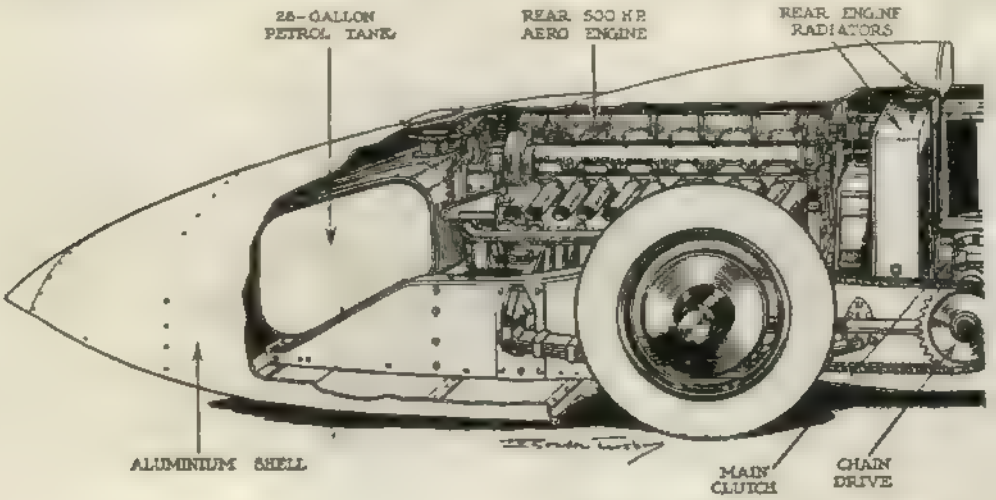
front axle passes from side to side, while the rear axle—solid and cranked to pass below the rear engine—passes through an oval-shaped hole in each side member, which at this point has its maximum depth. Each engine, weighing 1100 lb., is mounted on a subframe with three spherical points of support.

The way in which the two engines are coupled together and to the transmission is a special feature of the design. At the back of the front engine is a large friction clutch, inside of which is a dog clutch and from this extends rearward a shaft coupled up to the rear engine. When the car is to be used the front engine is first started by compressed air, the friction clutch is engaged and this has the effect of starting the rear engine. At this stage the dog clutch is allowed to engage and thereafter the two engines run solidly together.

In the length of the coupling shaft between the two engines is a multiplying gear connected through the main control clutch to a three-speed gearset, the primary shaft of which is caused to rotate 2½ times as fast as the engines. The main clutch is of the plate type with 11 bronze and 11 steel plates running in oil.

From the three-speed gearset the drive passes to bevel reduction gearing on a universally jointed countershaft having at each end a sprocket for the side chains, which form the final transmission. There is no differential.

Offhand it may be difficult to understand why a multiplying gear on the engine or power side of the main clutch and gearset is used and a reducing gear on the other side of the gearset. The idea is to make it possible to use a main clutch and gearset of dimensions similar to those previously used in Sunbeam racing cars, since, with the higher speed of the shafts the torque



This pen sketch of the Sunbeam was

stresses on teeth and shafts are less than they would be at engine speed. But for this arrangement an immense clutch and an equally immense gearset would be required, calling for a chassis very much higher off the ground; moreover gear shifting would be an extremely heavy and difficult operation.

As indicating the size of the gears that are considered necessary to transmit engine torque directly, it may be said that the reducing gear on the power side of the three-speed gearset has teeth approximately 2 3/16 in. wide, the overall diameters of the driving and driven gears being respectively 13 in. and 5 in.

The car, it will be realized, has no direct drive; nevertheless the efficiency of the transmission is said to be approximately 85 per cent on the top gear ratio, which is 1.017 to 1. The other ratios are: Second, 1.56 to 1; first, 2.968 to 1, and reverse 2.6125 to 1. At the normal engine speed of 2000 r.p.m. the theoretical road speed is 73 m.p.h. on bottom gear, 138 m.p.h. on second and 212 m.p.h. on high.

Four-wheel brakes, pedal-operated through a Dewandre vacuum servo, are used; a hand lever actuates the shoes in the rear drums only. The shoes have cast-iron friction facings.

The wheelbase of the car is not excessive, being 141 in.; the track, however, is wider than usual, viz., 62 in., while the complete overall length is 23 ft. 6 in. and the overall width 72 in.

Specially made Dunlop high-pressure tires are used (36 x 6¾ in.) on wide base rims with security strips. The tires have very thin treads, for obviously at the high speeds expected a thick tread could not be held to the casing against centrifugal force.

The top, which incloses both of the engines and the rear wheels, is only 46 in. above the ground and the ground clearance at the lowest point is, roughly, 7 in. Armor plates are fitted around the tires and around the driving chains to guard against damage in the event of a tire tread or chain flying off at speed.

Driver is Well Protected

To give the driver a reasonable chance of escape from serious injury in case of accident the car is fitted with an undershield of steel plate 6 mm. (roughly ¼ in.) in thickness, the idea being that the car will slide along the ground on this shield if by any chance a wheel should come off. In front of and behind the driver are stout steel hoops within the body to prevent it from being crushed in if the car overturns.

The actual wind resistances at various speeds are as follows:

Speed	Wind Resistance
180 m.p.h.	740 lb.
190 "	830 "
200 "	930 "
210 "	1020 "

Experiments have shown that there will be some remarkable forces at work when this car runs at its maximum speed. In the first place, air pressure on the front portion will tend to force the "nose" and wheels into the ground, and at the rear end a smaller force will try to raise the tail. Roughly, the pressure downwards on the nose is 700 lb. while lifting pressure at the tail is 200 lb. It is estimated, too, that at a speed of 200 m.p.h. something like 500 hp. will be necessary to overcome wind resistance alone.

Note—A speed of 166.51 m.p.h. was attained in the Sunbeam by Major Segrave in his first test at Daytona Beach, March 24. This breaks the official world record for Daytona Beach, but not the world mark of 174.2 m.p.h. by Capt. Malcolm Campbell in Feb. at Pendine Sands, Wales.

New Cars and Models

The New Dodge Senior Six at $1,595 is Announced

Latest Addition to Its Line is Notable for Its Straightforward Design and Also Its Four Wheel Hydraulic Brakes

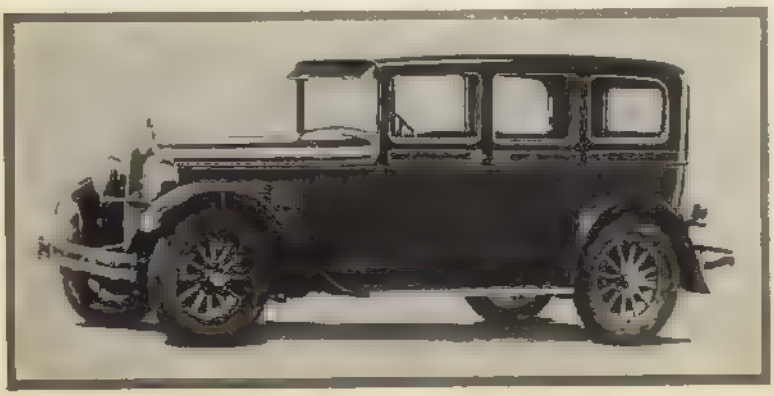
By Athel F. Denham

REPRESENTING the first entry of Dodge Brothers into the six-cylinder field, the new Senior Line which is now being introduced involves no radically new features of design. While only a single body type is available at present, a four-door sedan, which lists at $1,595, Detroit, other models including a four passenger coupe and a cabriolet roadster will be added.

An unusually heavy crankcase features the engine used in the new car, which although built by Continental has been designed and developed by Dodge Brothers, other chassis units with the exception of hydraulic four wheel brakes being based on the corresponding units in the present four cylinder line, including a single plate clutch, standard shift three speed transmission, semi-floating spiral bevel rear axle with torque tube drive, semi-elliptic springs, I-beam front axle, and worm and sector steering gear.

Incorporated in the six-cylinder L-head engine, with a bore of 3¼ in. and a stroke of 4½ in., is a 69 lb. crankshaft, having seven main bearings, the front bearing which also takes the thrust being 2⅜ in. in diameter, while the others are 2⅜ in. Crankpin diameters are 2⅜ in. throughout. A total of eleven inches of main bearing length is used, divided up as follows: Front 2 1/16, Center 1⅞, rear 2 5/16, intermediates 1 3/16. With a total piston displacement of 223.98 cu. in., this gives a ratio of only 7.91 cu. in. per. sq. in. of crankshaft bearing projected area. N.A.C.C. rating for this engine is 25.3 hp.

Driven by a 1½ in. wide, half-in. pitch Morse center guide chain, provided with a manual take-up by means of an eccentric bushing on the generator support, the 5/16 in. lift camshaft is provided with four bearings, decreasing the diameter from front to rear, the diameter and the lengths of the bearings being as follows:



The four-door sedan of the new Dodge Six line

The engine designed by Dodge and built by Continental

	Diam.		Length
Front	2⅝	x	1 23/32
2nd	2 5/16	x	1
3rd	2 9/32	x	1
Rear	1⅛	x	2

Chromium steel cam followers operate the 1 7/16 in. silchrome exhaust and 1⅛ in. nickel steel intake valves. The combustion chamber has been designed to secure maximum turbulence the highest point being immediately over the intake valve, at which point the spark plug is also located.

Pistons are of the Nelson steel strut aluminum alloy, four ring type, all four rings being located above the piston pin, the three upper being ⅛ in. and the lower 5/32 in. wide, the lower ring being of the oil control type. Two snap rings are used to locate the full floating ⅞ in. piston pin in the piston, the pin itself being 2¾ in. long. Connecting rods are conventional in design, I-beam in cross section and 9⅛ in. between centers, the lower ends being of the spun in babbitt type. Lower rod bearings being 3⅜ in. diameter by 1 7/15 in. long, centrifugally cast in the rod.

Lubrication is by pressure to main, connecting rod and camshaft bearings. From the main header, part of the oil is passed through a filter. Thence it is returned to the chain case, flowing back into the pan. The oil pump, which is enclosed in the sump delivers the oil under pressure through drilled passages to the main bearings. Thence it is fed through drilled passages in the crankshaft to the connecting rods, and through drilled passages in the cylinder block casting to the camshaft bearings. Oil pump drive is by means of the accessories drive shaft located vertically at the left center of the engine, and driven by a worm on the camshaft. The distributor is located at the top end of shaft. A feature of the crankpan which is of pressed steel is a separate splash pan which attaches to the main crankcase with the same bolts as the crankpan, a gasket being used on each side of the splash-pan. Crankcase oil capacity is seven quarts.

Located back of and driven by an extension of the fanshaft near the top of the cylinder block is a centrifugal type water pump, which delivers cooling water through a manifold at the side of the engine to the rear cylinders. This manifold is combined with the removable cover plate, which also serves for the oil filter mounting. Water is also carried around between inlet exhaust valve guides, cored passages also extending to valve seats. An outlet riser is provided at the top of the detachable cylinder head, and is provided at the front end with an integral bellows type thermostat. Small passageways are provided through the thermostat valve and between the pump and the cylinder block to prevent the forming of steam pockets through total lack of circulation.

Both water pump and fan load and thrust are taken through two Timken roller bearings incorporated in the fan mounting, the fan being driven by a ⅝ in. Vee-belt. Take-up for this belt is obtained by screwing the front half of the fan pulley towards the rear half. To prevent oil escaping at the fan pulley, an oil thrower is provided at the front end of the crankshaft as well as a cork washer.

North-East six-volt electrical equipment is used throughout. The distributor has been designed for semi-automatic spark advance, 20 deg. manual control being provided. Ignition timing with full manual advance is set at 12 deg. before top dead center, firing order being 1-5-3-6-2-4. The North-East is mounted on a 5/16 in. baseplate and driven by the front end chain through a laminated spring coupling. This method of drive and mounting enables the generator to be removed without disturbing the timing chain. Bendix starter engagement is used.

Two strainers and a gasoline filter are provided in the fuel line, which is of the vacuum type, the tank at the rear of the chassis holding 16 gallons. A Stromberg 1¼ in. carburetor is standard, while an air cleaner is also furnished. The intake manifold is partially jacketed by the exhaust manifold, a double cored passage being provided in the latter. A double butterfly valve at the rear end of the exhaust manifold, controlled from the dash allows the exhaust gas either to pass directly into the muffler through the passage nearest the blocks or forces it to flow around the intake manifold and escape through the second passage.

Four Point Engine Suspension

Engine suspension is of the four point rigid type, the two front supports being cast integrally with the chain cover plate, and resting on the front frame cross member, while rear engine supports are integral with the flywheel housing. In unit with the engine is the 11 in. single plate clutch built for Dodge Brothers by Borg & Beck, and a standard shift conventional three speed transmission, similar to the type recently adopted on the four cylinder Dodge Brothers chassis. Gear ratio in this transmission in low is approximately 14 to one, while about 18 to one is used for reverse.

Both the countershaft gears and the front end of the spline shaft are supported on Hyatt roller bearings. A feature of the clutch is the ball bearing used in the clutch release mechanism, lubricated by a grease cup with a flexible tube, accessible without removing the floor boards in the car. Centering of the sheet steel clutch housing is obtained by counterboring the flywheel housing. A deflector hole is also provided in the flywheel to take any grease and oil away from the clutch plates.

Following Dodge Brothers' practice, a metal universal and a tubular propeller shaft enclosed in a torque tube is used. Gear reduction in the spiral bevel semi-floating rear axle is 4.54 to one, axle construction following the design used in the four cylinder model, with a pressed steel housing of 7/32 in. stock, chrome vanadium heat-treated steel gears and shafts, and adjustable taper roller bearings. The frame also follows closely on the four cylinder design, the major difference being in the provision of front and rear bumper brackets integral with the spring hangers.

Semi-elliptic two-inch width springs are used front and rear, the rear springs being underslung, 55½ in. long, while the front springs have a length of 37 in. Spring shackles are of conventional design, while the springs are provided with rubber stops above the axle supports. Reverse Elliott ends are used on the I-beam heat treated chrome vanadium steel front axle, steering knuckles being of the same material.

Ease of steering is obtained by using a 13 to one reduction in the worm and sector Gemmer steering mechanism and ball thrust bearings between the knuckles and axle ends. Lockheed hydraulic two shoe self-compensating internal expanding four wheel brakes are operated by the pedal while the hand lever operates the rear wheel brakes through mechanical connections, the rear brake shoes being so designed as to permit the optional use of either hydraulic or mechanical operation. Brake drums have an internal diameter of 14 in. and carry an integral reinforcing flange. Brake lining dimensions are 1¾ in. width, 3/16 in. thickness.

While the four door sedan is equipped with wood wheels as standard, it is possible that additional models in the line may be equipped with disk or wire wheels. Tires on all models are 32 x 6.00 balloons mounted on 20 in. rims.

Composite construction is used for the body of the four door sedan. Individuality is obtained through the use of a very narrow nickel plated radiator shell and horizontal louvres, while double belt moldings give the car a low appearance. Exterior finish is in lacquer, the basic color being blue with black belt moldings and yellow striping. Interior finish is unusually attractive. At present the cars are coming through in either dark gray mohair upholstery or light gray broadcloth.

Neat Instrument Panel

The same materials are used for finishing interior panels, while windows are trimmed in burled walnut. Arm rests are provided for the rear seat, while silk toggle grips, draw shades, foot rest and robe rail are all standard. Grouped under a distinctive instrument panel are an eight-day clock, speedometer, oil pressure gage, ammeter, and electric control gasoline gage, an additional gage being provided on the fuel tank at the rear. The instrument panel is lighted by an external lamp.

At the right of the instrument panel are two buttons for operating the choke and the manifold heat control. A locking ignition switch is provided at the left of the panel. Both throttle and spark control levers are mounted on the walnut steering wheel while the lighting switch is located just below the wheel on the steering column.

Standard equipment in addition to that previously mentioned for the four door sedan are front and rear bumpers, shock absorbers all around, vanity and smoking sets, rear vision mirror, vacuum operated windshield wiper and an engine thermometer on the radiator cap.

GENERAL

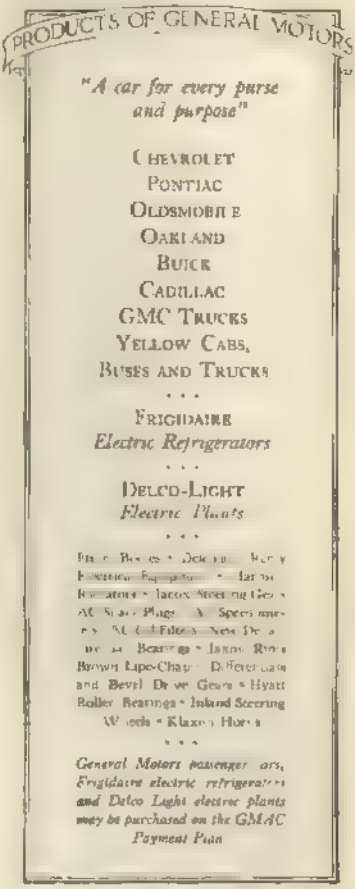
HOME
in a GENERAL MOTORS *car*

AT LEAST three million men go home from their work in General Motors cars. Their most precious asset is their time, and the car conserves it. For those who love the country it makes possible a country home.

To the homes of 170,000 employes General Motors has a very personal relationship; it sends into them more than $256,000,000 a year in salaries and wages.

And this is only part of the story. For General Motors purchases supplies from more than 6,000 sources in all parts of the country; it is an important buyer of cotton, of lumber, of steel and of other raw materials; it is one of the largest customers of the railroads.

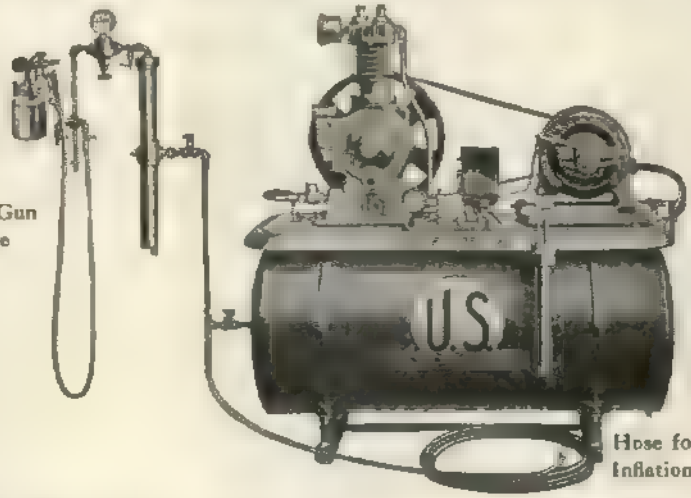
Thus the prosperity of any one industry helps all. And the prosperity of the automotive industry means good things, directly or indirectly, for almost every American home.



MOTORS

You've Waited for This!

A Combination Paint Spray and Air Compressor Unit



YOU have probably had the experience of trying to do paint spraying with inadequate air. Undoubtedly you have been solicited for paint spray equipment to be applied to your present air compressor which was built for limited tire inflation only. Now U. S. offers you a complete unit with which you can do paint spraying and it has sufficient air for tire inflation.

This is an ideal equipment for the shop where both services are in demand. It is a trouble-proof unit for painting used cars, for touching up scratches and mars on new ones. Send for information on these complete units.

AW-2 Car Washer Self-Oiling

A high-pressure, hydraulic, car wash equipment which is built up to a standard of the modern motor car; self oiling and totally enclosed; no grease or oil cups to bother with

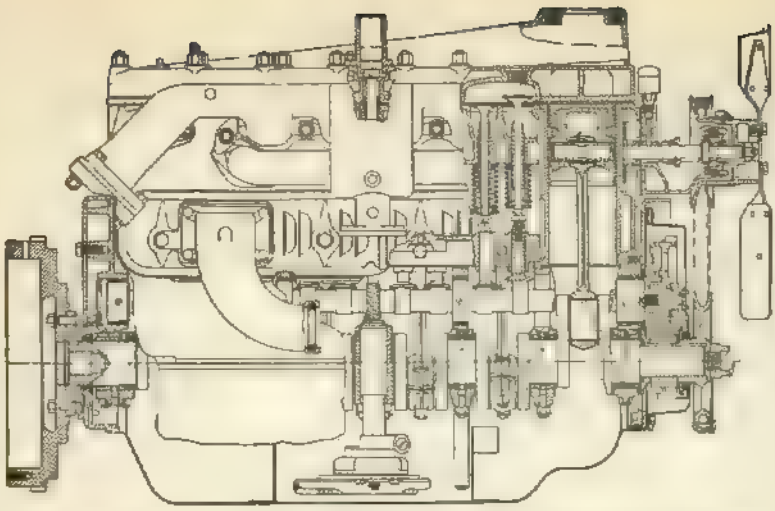
U.S.



Section through the Wolverine, Reo's latest six-cylinder offering

of 25.2 h.p., and a piston displacement of 199.1 cubic inches.

Seven bronze-backed babbitt lined main bearings are provided on the 2⅛ in. crankshaft. The camshaft is of the four bearing type and driven by a 1¼ in. chain, adjusted manually by means of the movable generator support flange. Minimum lengths of main bearings are 1 7/16 in. for the front, 1 ⅞ in. for center and rear, and 1 3/16 in. for the other bearings. The four camshaft bearings decrease in diameter from front to rear in 1/16 in. steps, the front bearing having a diameter of 2 1/16 in. and the rear 1⅞ in. Lengths are 1 11/32 in. and one inch for the front and rear bearings respectively, intermediate bearings having a length of 23/32 in. Pistons are of the four ring Nelson aluminum alloy type, with a piston pin diameter of 55/64 in. the pin being full-floating and 2 25/32 in. long. Connecting rods are of drop forged steel, 8 1/16 in. from center to center, the lower bearing having a diameter of 1⅞ and length of 1⅝ in. with the bearing spun into the rod.

Crankcase and cylinder block are cast integrally of grey iron, a pressed steel oil pan being used. Cast integrally with the detachable cylinder head is the housing containing a thermostat regulating the water circulation. A circulating water riser is embodied to eliminate any chance of steam pockets forming at the rear of the head. Water circulation is by means of a ball bearing centrifugal pump, a ¾ in. vee-belt driven fan and a Harrison ribbon cellular radiator with a nickel or chromium plated pressed steel radiator shell completing the cooling system, which has a capacity of 3½ gal.

Intake valves are of chrome nickel steel, 1 9/16 in. in diameter. The silicon chrome steel exhaust valves have a nominal diameter of 1 7/16 in., all being actuated by mushroom type valve lifters. A Stewart vacuum system with a 2-qt. tank on the dash supplies gasoline from the 17-gal. tank at the rear of the chassis to a 1¼ in. Schebler vertical outlet type carburetor. Primary air intake for the carburetor follows previous Reo practice, being taken from the crankcase, thus providing a crankcase ventilating system. Full pressure feed to main, connecting rod, and camshaft bearings is provided through a gear pump located in the crankcase, pressure also being provided to the front end timing chain. Piston pins and cylinder walls are splash lubricated.

Engine suspension is of the fourpoint rubber cushioned type, identical with that used in the Flying Cloud. North-East 6-volt electrical units with a Willard 86 ampere hour storage battery are fitted. The model LB-120215 generator is of the unit type, and the model SBH-3604 starter motor is fitted with an Eclipse Bendix starter engagement. Semi-automatic spark advance is provided in connection with the TU-10820 distributor, 22 deg. of the total 42 deg. advance being automatic. Distributor drive is by means of a vertical shaft through the center of the block, the unit being centrally located on top of the block.

An unusual feature of the ignition system is that the manual advance control is located on the dash where it is operated similarly to the choke control. It is rarely necessary to use this as the timing of the engine is based on a full manual advance, the distributor points opening with the flywheel one inch before top dead center. Spark plugs are ⅞ in. standard. Included in the lighting system are Tilt-Ray filament bulb headlights, 3 cp. cowl lights and a rear traffic signal in addition to dome, dash and tail lights, the latter two being wired in series.

A Borg & Beck 10QL single plate clutch and a Warner Gear model AS23-T-64J three-speed selective gear transmission are built in unit with the engine. Gear reduc-

New Cars and Models

Reo Announces Wolverine, a Low-Priced Six

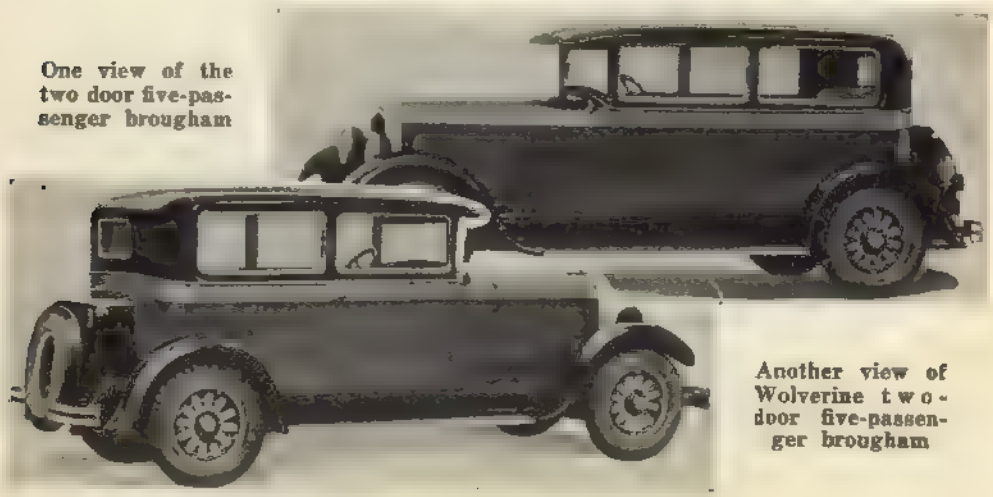
By Athel F. Denham

REO has brought out a companion car to the "Flying Cloud." Built in a single body style, a two-door five passenger brougham, the "Wolverine" Six will be marketed through the regular Reo organization. It has a wheelbase of 114 in. and is priced at $1,195, representing the lowest-priced six-cylinder closed car ever marketed by the Reo Motor Car Company.

With present production schedules on commercial cars and buses in addition to the large production of "Flying Cloud" models, taking up practically the entire capacity of the Reo plants, and in order not to delay the appearance of the "Wolverine," a radical departure from previous Reo practice has been inaugurated in that stock units for the new car are being purchased outside. A special built Continental engine, Borg & Beck clutch, Warner Gear transmission, Salisbury axles and Hayes-Ionia bodies make up the major units of the "Wolverine."

The writer rode in one of the new models which had been subjected to practically 10,000 miles of hard experimental driving, including a trip to the Pacific Coast and back. While nothing had been done to the car, according to Reo officials, except a few minor adjustments, performance was excellent. A high speed of from 60 to 65 m.p.h. according to the speedometer, was easily maintained, acceleration from five to 25 m.p.h. took roughly somewhat less than 20 seconds, and no well defined periods of vibration could be noted anywhere in its speed range.

Although the six-cylinder Continental "L" head engine embodies a number of features of Reo design, it is fundamentally of the same type as used in two other slightly higher priced cars recently placed on the market. Bore and stroke are 3¼ by 4 in., representing an N. A. C. C. rating



One view of the two door five-passenger brougham

Another view of Wolverine two-door five-passenger brougham

tions are 3.114 in low, 1.69 to one in second and 3.78 to one in reverse with direct drive in high. A transmission brake with an eight inch diameter drum, two inches wide is provided and connected to the emergency brake hand lever. Two Universal Products metal type universal joints are fitted to the one piece tubular propeller shaft.

Both front and rear axles are of Salisbury make. The model M 1649E rear axle is of the spiral bevel conventional type, semi-floating and fitted with gears giving a rear axle reduction of 4.45 to one. Annular bearings carry the pinion shaft. The front axle is of I-beam construction with Reverse Elliott ends. Lockheed hydraulic service brakes are fitted on all four wheels. These are of the internal expanding type, drums being 12 in. in diameter, with the lining 1 3/16 in. wide and 3/16 in. thick. The supply system is similar to that used on the Flying Cloud, a reserve tank being located adjacent to the brake pedal providing automatic replenishing of the system.

Steering is effected through a Ross model PA cam and lever steering gear. The steering wheel is 17 in. in diameter and the column shaft has been changed slightly to permit of the fitting of a Hershey coincidental lock. As 80 deg. of steering arm travel are obtained with 2.71 turns of the wheel a turning radius of but 19 feet has been obtained.

Both torque reaction and propulsion are taken by the semi-elliptic springs. These are unusually long, front springs being 37 by 2 and rear 55 by 2 in., metal shackled. Although provision is made on the car for fitting of Lovejoy shock absorbers these are not fitted as standard, the long springs alone giving the car very good riding qualities.

Pressed 5/32 in. channel steel, 6 in. deep is used for the members of the frame, which has a kick-up over the rear axle and 2 in. wide flanges. Tubular cross members are provided at either end with four pressed steel cross members amidship. The usual type of tie-rod is also provided below the frame back of the flywheel to absorb twisting stresses in the frame.

Eighteen-inch wood wheels, mounted on tapered roller bearings with 28 x 5.25 in. balloon tires, on 18 x 4 in. split rims, are standard equipment, while Zerk pressure gun fittings are used at chassis points requiring lubrication.

While the body on the "Wolverine" from the cowl back closely resembles that of the two-door Flying Cloud brougham, the fluted radiator shell and hood and two sets of horizontal louvres give the new car a distinctive appearance. Bodies are of composite construction. Upholstery is in striped mouse gray velour and exterior finish in duo-tone lacquer with colored window reveals and single belt molding. A rather neat instrument panel contains the speedometer, ammeter, oil pressure gage and dash gasoline gage, the instruments being lighted indirectly. The dash gasoline gage is of the dual electric type, an additional dial being mounted on the tank at the rear. Spark and choke controls are mounted to the right of the panel on the instrument board. The lighting switch is mounted on the steering wheel, and the ignition switch is incorporated in the Hershey coincidental switch on the steering column.

Standard-equipment also includes bumpers front and rear, automatic vacuum type windshield wiper, rear vision mirror, locking type tire carrier, black enameled nickel trimmed steel trunk, cowl ventilator, one-piece swinging windshield, cowl lights, door lock, dome light and rear traffic signal. Shipping weight is in the neighborhood of 2800 lb. complete.

New Rolls-Royce Model Increased $2,000

Production by Rolls-Royce of America, Inc., of its "New Phantom" model, an adaption of the improved car recently introduced by Rolls-Royce, Ltd., in England and embodying left-hand drive, four-wheel brakes and other changes needed to meet the American trade, is announced as under way at the East Springfield, Mass., works. The car is said to give one-third more power and is offered at an increase in price of $2,000 over the car produced with the "40-50" or Silver Ghost chassis, which will be continued.

Chandler Adds Coupes

Chandler-Cleveland Motors Corp. has added country club coupe models to its big six and royal eight lines, the former listing at $1,695 and the latter at $2,195. Two color options are offered. Upholstery on the big six model is blue-gray, deep-tufted mohair, and on the royal eight either blue gray mohair or champagne-toned broadcloth.

AC Markets Oil Filter

The AC Spark Plug Co. has placed a complete AC oil filter installation on the market for application on cars not so equipped. The unit package, containing filter and fittings with complete instructions for installation is adaptable for installation on various models of 29 makes of cars.

Information About Lindbergh's Engine

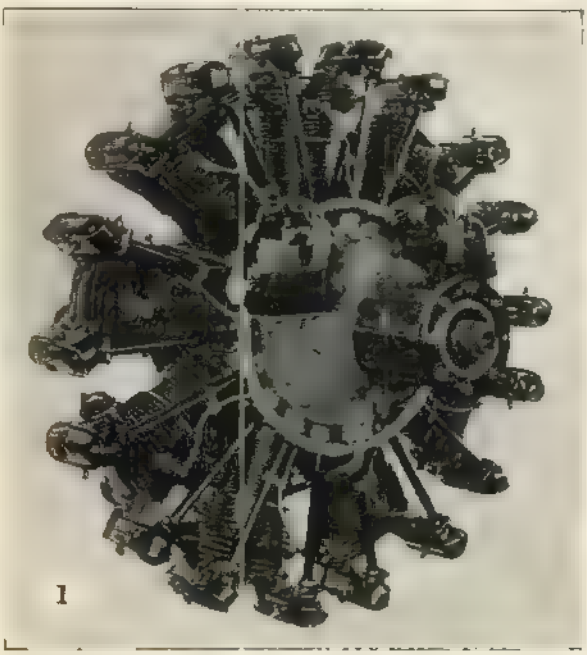
Editor, Automobile Trade Journal:

Will you give us some dope on the engine used in Colonel Lindbergh's Ryan monoplane with which he flew to Paris recently. What we are most interested in is the method of attaching the connecting rods and the firing order?—Gene Burns, Rook St., Denver, Colo.

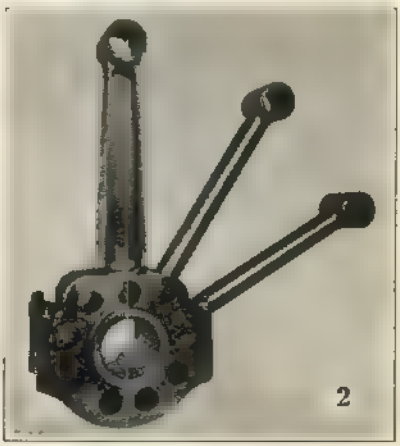
The Wright Whir wind engine used by Colonel Lindbergh in his New York to Paris flight was of the same make and model as utilized by Commander Byrd and the three engined Fokker which recently completed the San Francisco Hawaiian trip. It is a nine cylinder air-cooled static radial type. The engine operates on the conventional four stroke cycle. The bore is 4½ in. and the stroke 5½ in. giving a total displacement of 788 cu. in.

For the benefit of those readers who are not familiar with the radial type engine it can be stated that the word as applied designates an engine having the cylinders arranged radially (like the spokes of a wheel) about a single point. In a radial engine the cylinders do not revolve—the pistons move up and down in their cylinders in the same manner as an automobile engine.

Without going into extensive detail with regard to method of attaching the connecting rods it can be assumed that practically all modern radial engines (except the fan type) are equipped with a single throw crankshaft and an odd number of cylinders. The Wright Whirlwind has a single throw crankshaft on which is mounted the mother or master connecting rod. Attached to the lower end of this master connecting rod are the 8 crankpins on which ride the additional connecting or link rods, as shown



1



2

Left—Fig. 1. Front or propeller end of the Wright Whirlwind engine showing Scintilla magnetos and A.C. spark plugs. Right—Fig. 2. The Wright, like most radial engines, incorporates a mother or master rod to which the other 8 rods are pivoted

at Figs. 2 and 3. It will be seen at Fig. 2 that only the mast rod bears on the crankshaft crankpin. The lower end of this master rod is provided with a steel-backed babbitt-lined bearing while the knuckle and wrist pin bearings are of bronze. On the Wright Whirlwind this master rod lower bearing which also carries the eight knuckle rod pins is of the split type and is provided with four cap bolts as shown. On some radial engines the master rod lower bearing is solid.

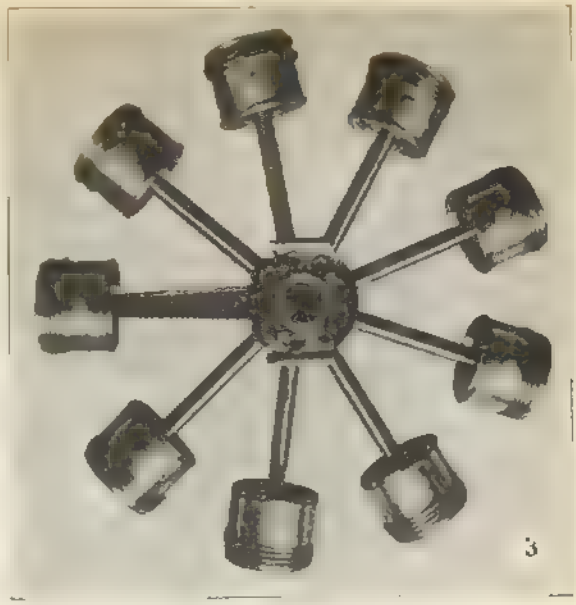


Fig. 3—This shows the crankshaft with rods assembled. Only the master rod lower end bears on the crankpin

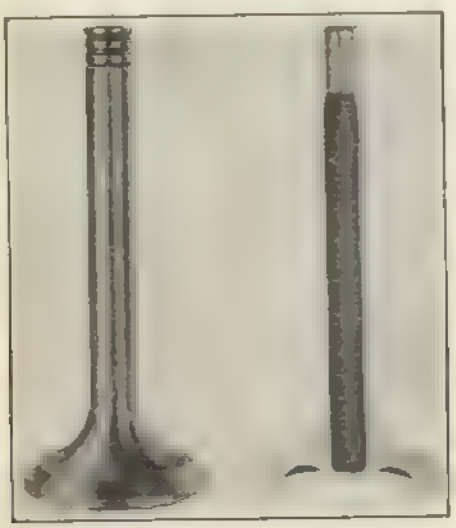
Odd Number of Cylinders

Since practically all radial type engines (and there are several makes built here and abroad) have a single crankpin crankshaft the number of cylinders must be odd so that the firing order will follow the direction of rotation of the crankpin and also so that there will be even and equal spacing between explosions. This is easily understood when it is realized that all four cycle engines fire the total number of cylinders one in each two revolutions of the crankshaft. In the conventional radial therefore with an odd number of cylinders on the first revolution we fire the cylinders No. 1, 3, 5, 7 and 9 and on the second revolution the cylinders No. 2, 4, 6 and 8. This firing order assumes that the cylinders are marked in rotation and means that on the first revolution after the No. 1 cylinder fires the next one to fire will be two distant from it, which will be No. 3, and the next one No. 5, etc.

The radial engine is not a new development and was widely used both during and before the war mostly in foreign countries. Comparatively recent developments in cylinder design by American engineers have enabled this country to build one of the really successful air cooled radial engines. These cylinder designs have made possible very high mean effective pressures. It is interesting to note that the modern air-cooled radial operates at mean pressures up to 130 lb per sq. in. which is considerably higher than the 75 to 100 lb. maximum used in the most efficient water-cooled stock automobile engines and on a practical parity with the best water cooled aviation engines of the tandem and vee types.



Thompson salt cooled valves as shown above are used in the Wright engine

Use Thompson Valves

Another feature that has greatly contributed to the excellent power output and great reliability of the Wright and other air cooled radial engines is the use of salt cooled valves. A salt cooled valve is one in which the stem is drilled and filled with a certain salt which assists in transferring the heat from the head to the stem and out through the valve guides to the cylinder cooling fins. After being filled with this salt the valve stem end is sealed closed with a metal plug. The valves used in Wright engines are built by the Thompson Products, Inc., of Cleveland and are of the cup-

ped design. Seat, stem, and tip are all of different hardness adapted exactly to operating conditions. The valves are ground and burnished all over. It is estimated that each valve closed and opened 1,447,200 times during Lindbergh's 33½-hour flight which is said to be the equivalent of a laborer striking fifty 200-pound blows per minute with a sledge for two and a half months.

The average fuel consumption of the Wright Whirlwind engine is one-half to six-tenths of a pound per horse power hour which means about 9¾ to 10½ gals. of gas each hour when delivering its rated 200 horsepower.

Reducing Oil Consumption On Nash

Editor, Automobile Trade Journal:

It may be possible that you can give me some advice on a Standard Six Nash sport touring car, after I relate my following experience. A customer brought this car to me for repairs, it being a chronic oil eater, and after making the following repairs very carefully checking every operation, I am very much disappointed at the results and at a loss to know just the cause of the same. The following operations will give you some idea of the work done:

Head was removed, carbon cleaned, valves refaced and reseated and ground in very carefully. Cylinder block honed out .010 oversize and fitted with light gray iron pistons, allowing .0015 clearance and carefully fitted with Perfect Circle compression and oil rings, lower groove being drilled with 5/32 holes one inch apart. This I considered as near an ideal job as one could make it (cylinders being within .0005 of true as all were micrometered repeatedly to make sure as near perfect fit as possible). This job was run in without power in motor until working freely before being run on own power.

For one month or six weeks this engine performed with perfect satisfaction to myself and owner. (Quaker State Med oil being used in crankcase.) Then by degrees it began to burn oil getting worse all of the time until now about three months after working the engine over the owner is disgusted with the car and I am at a loss to know what has happened to cause same. The compression is still very good, not much "blow back" around rings and car has power and speed but the exhaust is very smoky. Can you help me out on this dilemma, or solve the mysterious action of this motor?

Connecting rods were relined and checked carefully before installing, connecting rod bearing caps filed but slightly, oil pressure good. Could it possibly be that oil pressure was too high, causing excess smoking and consumption of oil?—R. H. France Las Cruces, N. M

We have taken up this trouble with the field representative of the Perfect Circle Piston Ring Co. It is recommended that you do either one of the following:

Remove the pistons and drill additional holes in the lower ring groove to increase the oil return capacity. Or, better still, install an additional oil ring in the third ring land, or next to bottom ring land. If you use the latter method it will be advisable to drill the same number of holes in the third land as you now have in the fourth land. It is our belief that if this is done, the oil consumption will be brought back to normal. We would also suggest that the oil pressure be maintained at normal.

The recommendation on installing the additional oil control ring on each piston, however, is perhaps the best point of attack on this problem.

Don't Grease Buick Springs

Editor, Automobile Trade Journal:

Will you please give us information whereby we can stop the shimmy in the front wheels of a Model 125-55 Buick Master Six. The wheels do not shimmy at slow speed not until it reaches the speed of 40 to 45 miles per hour. We have inserted taper wedges between axle and spring with thick end of wedge toward front of car. This helped quite a little and practically stopped the shimmy as long as the motor is pulling the car, but quit feeding gas and then it starts to shimmy.

We have been having several Buick Master Sixes, 1925 and 1926 models with this trouble usually showing up after the car has been driven about 2500 miles.

The above mentioned wedges used were furnished by Buick Motor Car Co.—Green Bros. Garage, Richmond, Ind.

The local Buick Maintenance Organization suggests that you examine the front springs carefully to see that they are free from lubricant. If the front spring leaves are greased or oiled this, in many cases, will produce shimmy. As you probably know, the Buick Motor Co. strongly disapproves of spring leaf lubrication, and, if the springs on the cars in question have been lubricated it will be advisable to remove them and give them a good cleaning in gasoline or kerosene.

If the wedges referred to seem to have eliminated part of the trouble it is possible that the remainder can be eliminated by the installation of a new pair of half nuts in the steering column assembly. These new half nuts of course can be secured from any local Buick dealer or direct from the factory. It is also suggested that you make sure that all the steering connections from the king bolt backward are properly adjusted and without excessive play at any point.

Oil Pressure on Star

Editor, Automobile Trade Journal:

I am having trouble keeping the oil pressure up on a Star 4 car. I put in new springs and new pump gears and looked at the bearings, but cannot keep the pressure up when the engine gets warm. I would like to have you tell me how I can overcome this trouble.—L. E. Parkis, Bloomfield, Neb.

It is our guess the trouble is due either to loose main, rod, or camshaft bearings, or to excessive clearance somewhere in the pump mechanism, either between the gears and the pump cover or between the pump driving shaft and housing.

To determine definitely what causes the loss of pressure we would suggest you make an oil test on the system, as outlined on page 31 of the September, 1925, issue of AUTOMOBILE TRADE JOURNAL.

A potential market of millions/

THERE is a vast potential market of motor car users—actually millions—who need the protection afforded by a motor heat indicator whether it be dashboard, steering column or radiator cap mountings

A Boyce Moto Meter may be had in all three types of installations but The Moto Meter Company Inc. particularly recommends the radiator cap mounting *Constantly in the direct line of driving vision* it affords proper protection with relaxation from dashboard attention

Ten million motor car drivers are today enjoying this protection and driving comfort: such public acceptance is not easily or wisely diverted. The progressive dealer needs no further indication of its potential sales possibilities

New Cars and Models

Hupmobile Six is Improved in Appearance and Performance

By Athel F. Denham

STRIKINGLY improved in appearance the new six-cylinder line announced by the Hupp Motor Car Company embodies also numerous improvements in mechanical design. Although prices of individual body models differ somewhat from those of the former line, the price range remains about the same, ranging from

Price Ranges from $1,335 to $1,395

$1,335 to $1,395, for the fundamental body styles. The roadster at $1,335 is $50 lower, the two-door sedan is $40 lower at $1,345 and the four-door sedan $10 higher at $1,395. A seven-passenger phaeton, largely for export, at $1,395 replaces the former five-passenger phaeton at $1,325. The new four-passenger coupe lists at $1,385. In addition there will be two custom-equipped lines consisting of the same models with special equipment. With five wire wheels the bodies are listed $80 higher. At this price the models are also obtainable with six disk wheels including fender wells, cowl bars, nickel headlights, cowl lights and tail lights and trunk rack. Similar equipment with wire instead of disk wheels increases the price of the fundamental body syles by $150.

Midland Steeldraulic Four-Wheel Brakes

Leading the mechanical chassis changes is the adoption of Midland Steeldraulic four-wheel brakes. These brakes pioneered

Hupmobile Six four-passenger coupe listing at $1,385 is a new body model in the line

Hupmobile six sedan showing front shackling of springs and integral bumper mounting plates. List price is $1,395. Fender wells as shown are optional at $80 extra

by and perfected in cooperation with Hupmobile are of the internal expanding type using a one-piece shoe with molded composition lining and are self-energizing while the wrapping effect is prevented by flanging half of the shoe. It is claimed that with the molded composition wear is materially decreased, therefore increasing the period between adjustments. The brake being self-energizing only a very light pedal pressure is required. Adjustment when necessary is externally effected.

Cylinder Bore Increased

The new engine of the 1928 model is developed from the engine used in the previous model. However, a number of important changes have been made. The bore is now 3¼ in. as compared with 3⅛ in. formerly, while the stroke is retained at 4¼ in. This change has increased the piston displacement from 196 to 211.5 cu. in., the rated power now being 25.3 hp. as compared with 23.4 formerly. Maximum power has naturally also been increased; the engine peaking at over 57 hp.

While the larger bore is partially responsible for the decided increase in power, a new type of cylinder head design has also contributed towards this end. The new head which is completely machined has the spark plug located over the exhaust valve. This design has been adopted following considerable research which is said to have indicated that the danger of detonation is reduced to a minimum with the spark plug located in the hottest portion of the combustion chamber.

Pressure Oiling to Pins

With the increased power additional cooling has been provided by increasing the water passages by ¼ in. A number of important changes have also been made in the crank train. Connecting rods are now rifle-drilled, providing pressure lubrication to the piston pins. This has involved enlarging the drilled passages in the crankshaft and lengthening of the main bearing and connecting rod oil grooves. Dimensions of crankshaft and connecting rods, however, remain as formerly, the crankshaft being of the four-bearing type with 2⅛ in. crankpins and main bearings ranging from 2 11/32 to 2 25/64 in. in diameter. All bearing caps are of heavier design in keeping with the increased power. Three ring cast iron pistons are continued. Piston pins, however, are larger in diameter, now being 1 in. as against ⅞ formerly. They are now full floating with a bushing in the rod. Valves are unchanged.

Dash Controlled Hot Spot

Among the exterior engine changes is a new fan pulley hub which is now of pressed steel instead of the forging formerly used. The new four-bladed fan is designed to equalize the thrust from the water pump; fan and water pump running on the same shaft. Capacity of the cooling system, including the McCord cellular radiator, is now 13 quarts. A new Stromberg T-2 1¼ in. carburetor is also included. As formerly an air cleaner, gasoline filter and oil filter are standard equipment. A further feature of the engine contributing to better performance is a new design manifold. The latter is equipped with two butterfly valves operated by the same control lever, the larger valve being in the main passage while the smaller one is in the secondary passage. When the lever is put in the "heat on" position the large butterfly is

closed and the small one open and all gases have to pass around the inlet manifold and through the secondary, slightly restricted, portion of the exhaust manifold. In the "heat off" position the gases do not pass around the inlet manifold although there is a slight amount of heating effect. Hupmobile engineers claim that when the manifold heat is in the "on" position quicker intake heating is obtained than in any other design which has come to their notice.

Flexible Clutch Disk Hub

Changes have also been made in the Autolite electrical system, the semi-automatic distributor operating on a new spark advance curve. A new ignition lock adopted on this car locks the distributor through a steel-clad cable. A Willard 100 amp. hr. battery is included in the electrical system. Starter engagement is by Bendix.

Changes in the clutch are toward obtaining smoother operation, a flexible disk center being provided in the driving member. Facings are still 8⅝ in. outside and 6⅛ in. inside diameter, the clutch being a single plate Borg & Beck. As compared with the previous model the clutch housing is heavier and a heavier gage clutch shield has been provided at the bottom.

Wider faced teeth are now used on the constant mesh gears in the Detroit Gear transmission. Gear reductions have also been changed somewhat, low gear reduction now being 3.11 to 1 as against 3.42 to 1 formerly. Chrome molybdenum steel axle shafts have been incorporated in the rear axle which follows the same design as used in the previous Hupmobile 6. Final gear reduction has also been changed somewhat, this now being 4.73 to 1 as compared with 4.90 to 1 formerly. Wheels are smaller, 19 in. in diameter and take 29 x 5.50 balloon tires. The front axle is still of I beam construction, with 1⅝ in. section. Frame is of entirely new design and provided with a double drop, contributing to the lowered bodies; 5/32 in. stock is used with 5⅛ in. depth and 2⅛ in. flanges. With the new frame, smaller wheels and new body design a total decrease in height of about 4 in. has been effected.

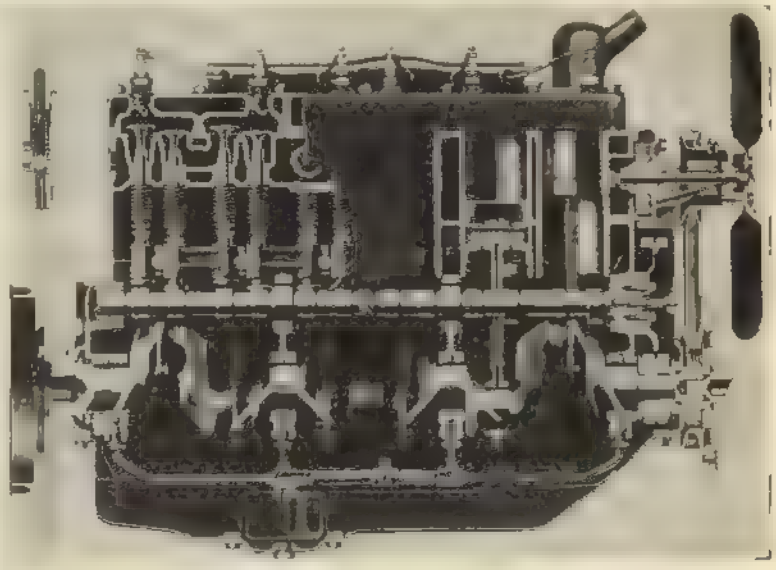
Brake Lever on Left Side

Springs are semi-elliptic all around. Front springs which have a negative camber and are shackled at the front end have a length and width of 37 x 2 in., eight leaves being used. The rear springs are 54 x 2, using 11 leaves. Steering gear is a Ross cam and lever.

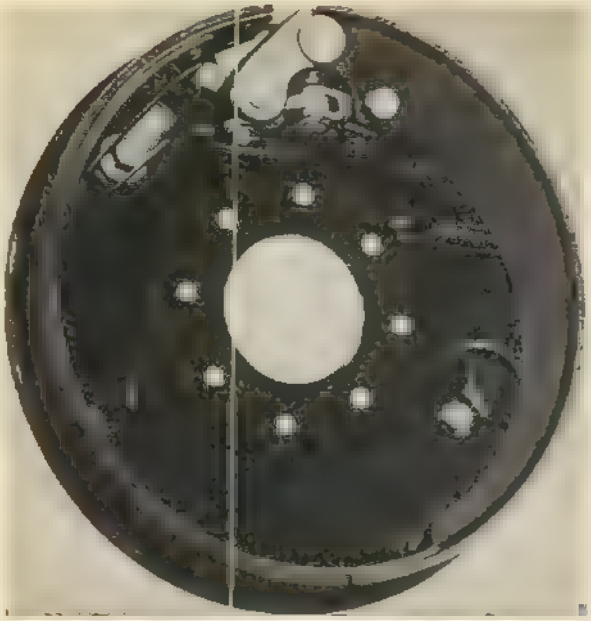
As previously mentioned, molded composition lining is used in the Steeldraulic four-wheel brakes. These have drum diameters of 12 in. fore and aft, with a 2 in. lining width. In servicing lining when necessary, the entire shoe is replaced. A feature of the brake is that it is assembled with 1/16 in. clearance, making for free running. This clearance is taken up in about two inches of pedal travel. The hand lever actuates the brakes on all four wheels. This lever following Hupmobile practice is located to the left of the driver.

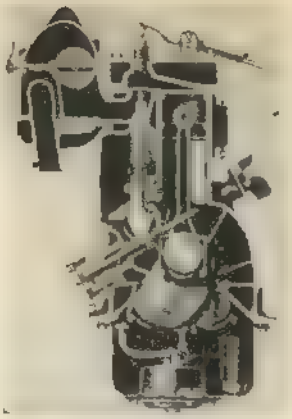
Murray Bodies Used

Bodies are a Murray Corp. product. With their lower lines and rounded contours they represent the most attractive Hupmobile 6 ever offered. Chromium plating is used wherever metallic finishes appear, including radiator shell, head lamp rims, door handles, hood holddown clamps, etc. A novel idea is also found in the hood,



The engine of the latest Hupmobile six has drilled connecting rods supplying pressure lubrication to the piston pins





Top—Engine view showing details of hot spot control

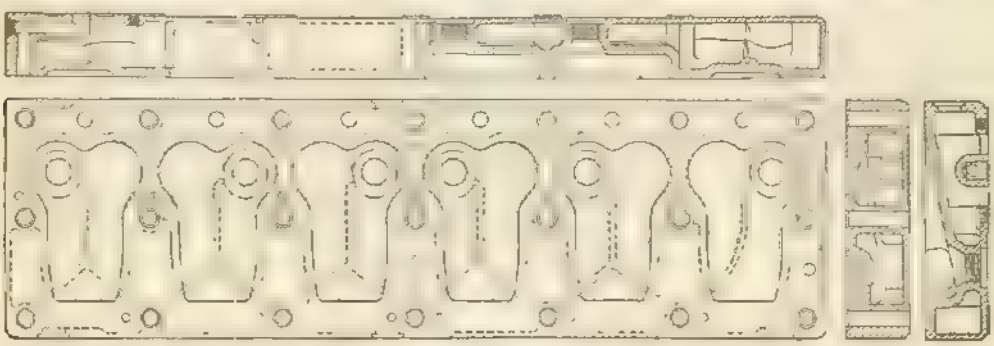
Left — Closeup of Steeldraulic brake used on Hupmobile Six. Note one piece band

where the central piano type hinge has been made quite prominent and chromium plated. A low radiator cap, also chromium-plated, is streamlined into this hinge. On the closed models a swinging type windshield, crank operated, is used while the open models have forward folding windshields. Sun visors on the closed models are of the cadet type.

All projecting chassis parts are covered with sheet metal. In the rear of the body, for instance, the sheet metal cover over the gasoline tank is extended out and over the spring horns. Two tone color schemes in pyroxylin finish are used on the exteriors of the bodies. A molding, slightly darker in shade than the basic body color, runs along the bottom of the bodies and is carried around the fenders. Window reveals are finished in contrasting colors. To carry out the rounded lines of the rear quarters, rear windows are also curved.

On the inside of the body such features as a steering column adjustable to three positions, a full length hinged accelerator pedal, and saddle spring cushions are found. In the coach the individual front seats have rigid backs. The instrument panel, which includes the usual intruments and in addition a dash gasoline gage, has a central Hupmobile monogram. Manifold heat control and choke buttons are on either side of the central panel, with light control, spark advance and throttle levers on the steering wheel.

Included in the standard equipment is the usual rear vision mirror, an automatic windshield wiper, a cowl ventilator, combination stop, reverse and tail light, double filament headlight and shock absorbers front and rear. A trunk rack is standard on the brougham. As mentioned a distributor lock is provided, located on the instrument board. The tire carrier is drilled for a padlock, while locks are provided when wheels are carried in fender wells.



Sectional view of new Hupmobile cylinder head. Note spark plug is located above exhaust valve

New Body Styles Feature Hupmobile Line

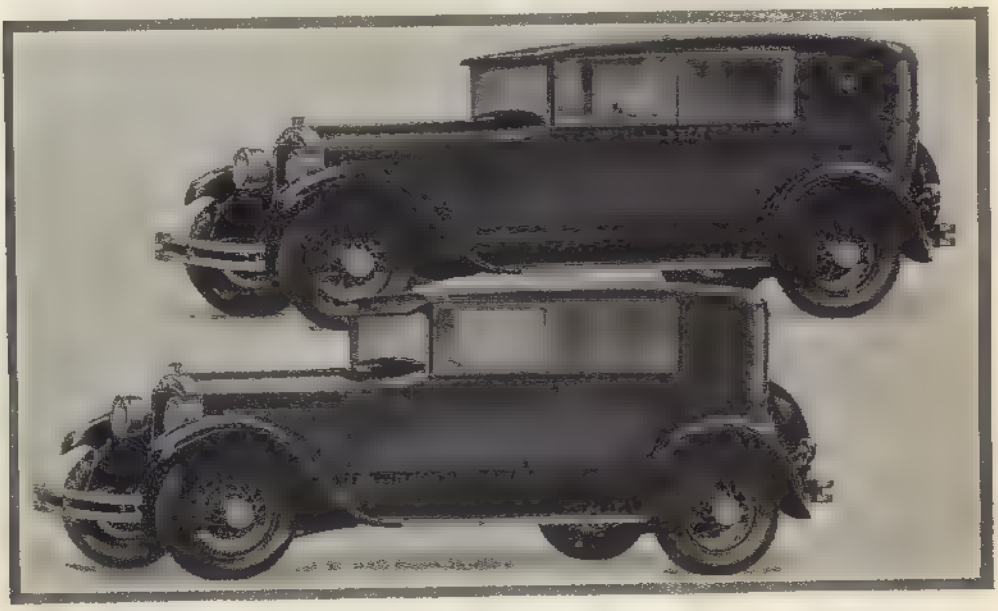
HUPMOBILE'S announcement for the National Automobile Shows will consist of improved editions of its regular six and eight-cylinder chassis. Both lines have been augmented by new body styles while relatively minor mechanical changes and body refinements have been incorporated. New colors will be featured also.

Three special custom-built bodies manufactured by Dietrich will be supplied to order on the eight-cylinder chassis. A two-door brougham will comprise the addition to the six line while changes have been made in the regular six sedan. Prices on the new body styles for both chassis will be announced by the Hupp Motor Car Corporation at the New York show.

To facilitate rapid warming up on the six a dash-operated manifold heat control is installed. While the general layout of the manifolding has not been altered, the integrally formed hot-spot for the intake mixture is designed so that all of the exhaust heat can be concentrated upon the intake header by a butterfly control valve. By means of two valves of different sizes embodied in the hot-spot formed with the exhaust manifold, it is possible to close simultaneously the large valve and open the smaller valve so that the hot exhaust gases from all cylinders will pass through the hot-spot. For ordinary driving after the motor is warmed up the large valve is left open so that the greater portion of the exhaust heat does not pass through the hot-spot, while the smaller valves close at the same time to such an extent that only a small amount of exhaust gas passes through hot-spot.

On the eight-cylinder manifold a single barrel type valve is incorporated which accomplishes the same control as the two butterfly valves on the six.

On the eight-cylinder engine other changes have been incorporated. The oil pump capacity has been increased to provide a higher reserve of pressure. Valves have had their head thickness increased. By raising the valve lift on the camshaft an additional 1/32 in., an increase in power has been obtained. A centrifugal type air cleaner of Handy make is now adopted on the eight engine. To provide for longer belt life, the "vee" fan belt is now of the "cogged" type which allows for greater strength in the lower part of the "vee." Dealing with the eight chassis additional stiffness has been secured by increasing the frame stock from 5/32 to 3/16 in. While employing the same make of Long clutch, the type has been changed from that of a single plate unit to a double plate clutch, the latter being said



Sedan limousine and five-passenger sedan, both custom built by Dietrich for the Hupmobile eight chassis

A Great Eight—Making

Today the eight is the most wanted and the most talked about type of car in America.

This significant change—this swing away from the six of higher price—had its beginning two years ago with the coming of the Hupmobile Eight.

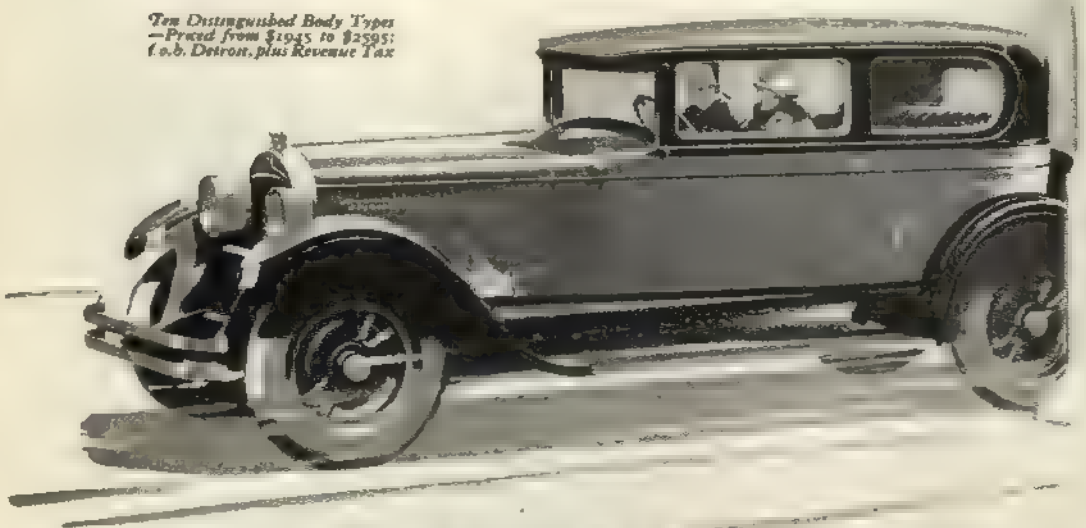
To the smoothness and ease of the eight, Hupmobile added the super-smoothness and ease of its own perfected straight-eight.

Hupmobile gave the eight an economy it had never known before—a generosity of gas mileage that surpassed many sixes. Hupmobile, with engineering and manufacturing sanity, built simplicity where had been complication before.

These things Hupmobile did, and is doing, and the motor car market responded with a rush.

And because this new significance of the eight has swept Hupmobile into the greatest straight-eight volume in the world, the new superiorities to be found only in the Hupmobile Eight are procurable at less than the prices of the finer sixes.

Ten Distinguished Body Types —Priced from $1945 to $2595: f.o.b. Detroit, plus Revenue Tax



Eight HUPM

A Great Six— Motor Car History

Hupmobile has now made this Six the closest-priced six in America, excelling even its own previous peaks of quality and value.

Ten per cent quality-increase—ten per cent more for finer materials and finer manufacturing—but not one penny added to the price.

In performance, reliability, staunch service—in low costs and long life—the owner benefits, and his satisfaction is enough for us.

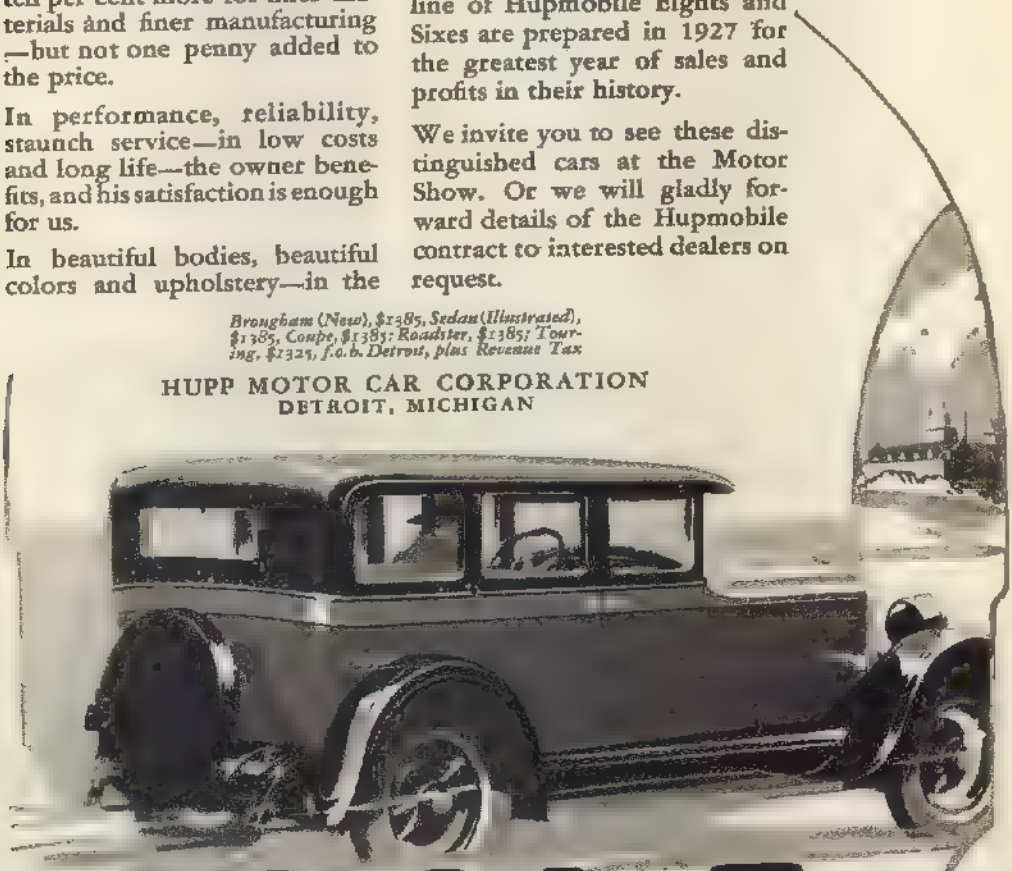
In beautiful bodies, beautiful colors and upholstery—in the wealth of high-grade accessory equipment—you see the results of Hupmobile's ten per cent higher quality.

Dealers handling the complete line of Hupmobile Eights and Sixes are prepared in 1927 for the greatest year of sales and profits in their history.

We invite you to see these distinguished cars at the Motor Show. Or we will gladly forward details of the Hupmobile contract to interested dealers on request.

Brougham (New), $1385, Sedan (Illustrated), $1385, Coupe, $1385; Roadster, $1385; Touring, $1325, f.o.b. Detroit, plus Revenue Tax

HUPP MOTOR CAR CORPORATION
DETROIT, MICHIGAN



HUPMOBILE *Six*

to make for easier engagement and longer life.

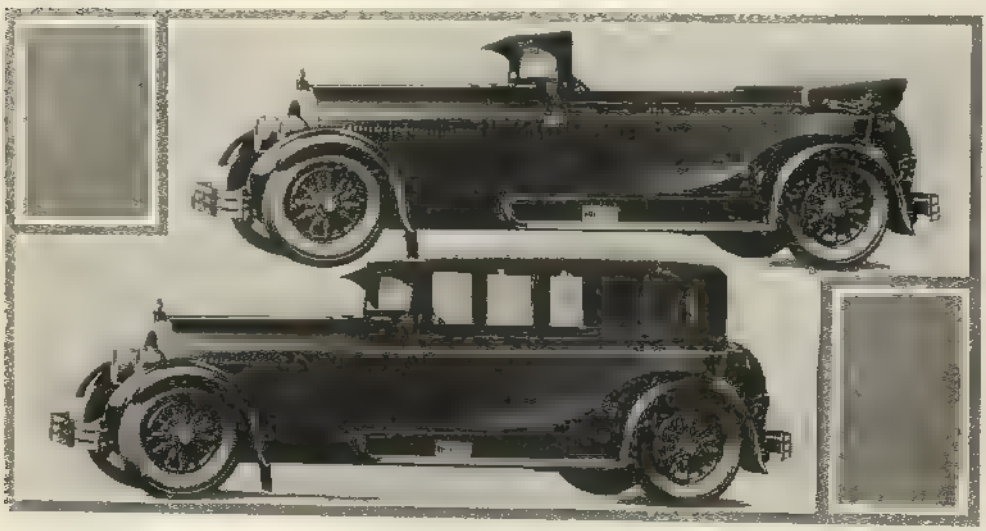
New design instrument panels have been adopted on both cars. All dials are mounted under a single piece of glass and indirectly lighted. Incorporated in panels on each side of the instrument frame are the conventional units which usually are mounted separately on the instrument board.

Headlight controls for both cars are now placed in the center of the steering wheel where they operate two-filament bulbs. On the six chassis an additional three-candle power bulb for parking is installed in the headlights whereas in the eight, cowl lights are provided as previously.

Changes on the six sedan body consist chiefly of adopting "ball" type or fully rounded steel backs for the rear upper quarters. To make for quieter door closing the previous metal center door pillar of this model has been replaced by a wooden member. On previous models plate glass was used only for the windshield whereas on the new models it is employed for all the windows. Slight changes have been made also on the six radiator shell design to give a more massive effect to the general contour. Body alterations on the production eight bodies include remote type door latch handles, heavier outside handles, and remote handles for the rear deck of the roadster so that the rear seat can be opened from the front compartment. Dash gasoline fuel gages are standard on both cars while the eight includes also an electric clock.

The new coincidental lock on the eight is known as the Electrolock and controls the ignition only. By means of armor covering for the wires, a type of theft prevention is secured which justifies the underwriters' "A" rating.

Body design of the new five-passenger six-cylinder brougham follows closely that of the improved sedan on this chassis. It is characterized by the rounded roof effect embodying an integral sun visor and a full rounded rear upper quarter. Disk wheels are optional on the new brougham as on other six-cylinder models. The three Dietrich custom bodies on the "eight" are a seven-passenger enclosed sedan limousine, a sedan for five passengers, and a seven-passenger convertible town car. The bodies are supplied fully equipped with bumpers and a set of five wire wheels.



Kissel Convertible Brougham

The new Kissel All-Year Brougham possesses the advantages of both a touring car and five-passenger brougham model as it can be quickly converted from one form to the other. It is illustrated at the top with the top center members lowered and the windows lowered flush with the sills, giving the appearance of a touring car. The other view shows the car as a brougham with the top and windows up. It is also possible to have the top up with the windows and center members lowered. No tools are required to make the conversion it is stated. Two 32 in. doors are used and the front seats being mounted upon a track slide forward to facilitate entrance and exit to the rear seat

Oakland All-American Has Medium Speed Engine

By Athel F. Denham

IN announcing the Oakland All-American Six, the Oakland Motor Car Company is offering a car which has been entirely redesigned, including a new, more powerful engine, new clutch, transmission, frame, and larger bodies, all on a 117-in. wheelbase chassis and at prices representing a reduction of from $30 to $100 for the various body models.

Reliability has been increased through the adoption of such features as a slower speed engine, and lower rear axle reductions. The AC engine fuel pump has been adopted. Performance has been bettered through the use of a larger displacement engine. Appearance is very materially improved by the use of lower, longer bodies, new fenders, greater hood length, and redesigned rears of bodies.

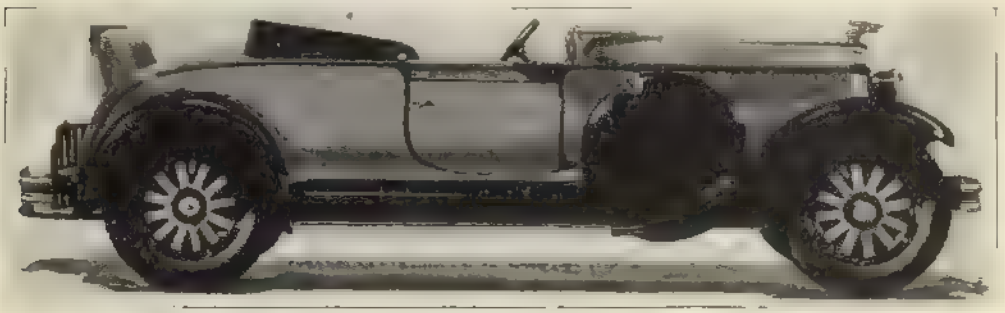
With a bore and stroke of 3¼ by 4¼ in., giving a piston displacement of 212 cu. in., and a N.A.C.C. rating of 25.35 hp., the new six-cylinder L-head engine develops 60 actual hp. at 2800 r.p.m. The more nearly square bore and stroke is another instance of endeavoring to build greater reliability into the engine, since it enables the design of a sturdier crankshaft, with larger main bearings.

The crankshaft itself is of the four-bearing type, and has counterweights forged integral with the shaft. A new type of torsional vibration damper composed in effect of two of the formerly used "harmonic balancers" is now part of the fan pulley. Main bearings, which are of the interchangeable, bronze-backed, babbitt-lined type, are stepped in diameter from front to rear, thrust being taken by the front intermediate bearing. Following are main bearing sizes:

	Diameter	Length
Front	2⅜	1¼
Front Center .	2⅜	1⅝
Rear Center .	2⅜	1⅝
Rear	2½	2⅛

Crankpin bearings are 2¼ in. in diameter and 1¼ in. long. Total weight of the unusually heavy crankshaft is 78⅛ lb.

Connecting rods are drop-forged H section, 9¼ in. long, with the lower bearing die cast in the rod, and the 1 ⅛ diameter piston pin locked in the rod, the piston pin being indentical with that used in the Pontiac engine. Since the bore of the new



Oakland open models of which this roadster is an example, have forward folding windshields

The New Oakland four-door sedan lists at $1,145

Oakland engine is the same as that of the Pontiac, pistons are also of similar design. These are of semi-steel construction with two 3/16-in. compression rings above the pin and one 3/16-in. oil type ring in the skirt. Overall piston length is 4 1/8-in.

Nickel steel (S.A.E. 2330 or 3140) is used for the 1⅝ in. outside diameter intake valves and No. 1 silicon chrome steel is used for the 1½-in. exhaust valves. Tappets identical in design to those used on the 6-54 Oakland are used, while longer 3⅝ in. valve guides have been incorporated. Valve springs, ½ in. longer than formerly, with the upper coils closed to dampen vibration, are used.

Of the four-bearing type, the camshaft is considerably heavier than in the previous Oakland engine. As in the crankshaft, bearing diameters are stepped from front to rear, as follows, the bushings being of grey iron of the replaceable type:

	Diameter	Length
Front	2 1/8	1⅜
Front Center	2 1/8	1⅛
Rear Center	2 1/8	1⅛
Rear	1½	1⅝

A gear is mounted on the center of the shaft for the distributor and oil pump drive. The accessories driveshaft runs transversely of the engine, and at an angle to the horizontal, so that the distributor is at the left side of the engine, and slightly above the camshaft, while the external oil pump is a little below the shaft and at the right side of the engine.

The Oakland head is said to be non-detonating

Front end drive is by means of a 1½ in. wide, ½ in. pitch, fifty-link chain. A vee type fan belt is used to drive both generator and water pump, this pump being mounted in the cylinder block back of the fan and driven through the fan shaft.

Cylinder block and crankcase in the Oakland All-American Six engine are cast integrally, the head being detachable. The crankcase is carried 2¾ in. below the center line of the crankshaft in order to provide maximum rigidity.

An interesting new combustion chamber is used. In this chamber three convex walls are used on the piston side. The spark plug is located in the center of volume of the head, and recessed from it. Absence of any tendency for detonation is claimed for this design. Compression ratio is 4.8 to 1.

Lubrication is by pressure feed to main, connecting rod and camshaft bearings, also direct to chain case. Piston, pin, and cylinder walls are lubricated by splash from vents in the connecting rod lower bearings. An oil return is provided in the system which enables oil to return to the sump in cold weather without passing through the oil pump screen. An oil filter is provided in addition to the large screen in the crankpan, and a new crankcase ventilating system has been incorporated. This system combines pressure and suction ventilation. Air is forced in by fan pressure at the left front end of the crankcase through an air cleaner of the filter type. The outlet is located at the right rear of the engine, turned back so that air draft past the engine will aid through suction. With the addition of this crankcase ventilating system Oakland is recommending the changing of oil only once every 2000 miles in

the summer, or every two months. During cold weather a change of oil every 1000 miles is recommended.

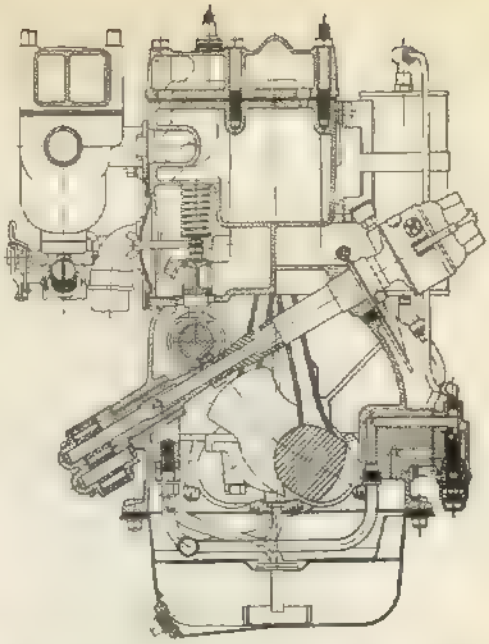
Although of similar design to that previously used in the Oakland, the water pump represents an interesting advancement, in that the impeller is so designed that for speeds up to around 30 miles per hour, there is no thrust on the thrust collar. A Durex bushing, requiring lubrication only every 5000 miles, is used to support the impellor shaft. A thermostat is built into the cylinder head. Water capacity of the Harrison radiator and cylinder block is 14 quarts.

A three-port intake manifold is used in conjunction with a 1-in. vertical type Marvel carburetor. The intake manifold is jacketed by the exhaust manifold in such a way that for the "winter" position heating of the inlet gases is obtained from the exhaust for all cylinders. In the "summer" position the hot spot is inoperative while in the "medium" position half the exhaust gases pass out directly through the exhaust manifold and half around the intake jacket.

In the fuel system, Oakland is pioneering the adoption of the AC camshaft driven fuel pump. In conjunction with this pump a visible type gasoline filter is used. An AC air cleaner is also standard equipment. Rear gas tank holds 13 gal.

Three-point engine support is employed, with the rear supports mounted in rubber washers. A separate truck type flywheel housing is used, supporting the unit clutch and transmission. The clutch is of the single-plate self-adjusting type. Outside diameter of facings is 8⅞ in., with an inside diameter of 5½ in.

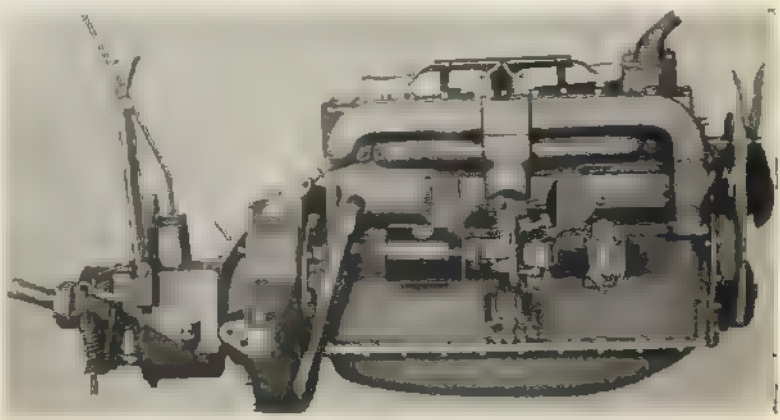
The three-speed transmission is conventional in design. A Hyatt roller bearing is used at the front of the main shaft which now has ten splines, the rear being supported by a ball bearing. The main drive gear bearing is somewhat larger than on the previous Oakland, and a flexible drive is



Section through new Oakland engine showing oil pump and distributor drive layout and pressure relief valve assembly at right

provided at the rear of the main transmission shaft. Countershaft gear cluster is forged from a single piece of chrome-vanadium steel, and runs on bronze bushings on the stationary countershaft.

Mechanics Machine Company metal universal joints are used on the new Oakland. The rear axle is semi-floating and similar to that used on the previous Oakland. Final gear reduction has been lowered, however, now being 4.45 to 1 as compared with 4.7 to 1 formerly. Gears having a 5.2 to 1 reduction are offered as special equipment through dealers. As a result of the decreased axle ratio, engine speed has been materially decreased at 35 m.p.h., the engine turning 1790 r.p.m. Maximum car



Oakland's new engine, showing exhaust pipe of crankcase ventilating system, oil pump directly below carburetor and the AC fuel pump

speed has also been materially increased as a result.

Delco-Remy electrical units are used. The distributor is of the full automatic type and is provided with a scaled lever adjustment making advancing or retarding spark for summer or winter driving a very simple operation. The generator is of the third brush adjustment type. Eclipse Bendix starter engagement is used, entirely inclosed within clutch and flywheel housing. Double filament Tiltray headlights with chromium plated rims are used. These are foot operated by a switch on the floor board of the driving compartment. Cowl light rims are also chrome plated, as are radiator shells and door handles on sport models. A spark plug wire manifold has been added.

The third arm on the front axle I-beam ends has been redesigned and is now separate from the steering arm. Tapers on the steering arms have been increased 1/16-in. in diameter for greater rigidity of the steering system. Service brakes are of the external contracting four-wheel type, with 12⅜ in. drums, 1⅞ in. wide. As formerly the Perrot control is used on the front brakes, to release the outside brake when turning. The parking brake is mounted on the transmission shaft immediately back of the gearcase, and has a 6-in. drum, taking 2½ in. lining. The ratchet and pawl arrangement on the parking brake lever is more rigid than formerly.

Nineteen-inch wheels of the wood spoked type are standard, together with larger cross-section 29 by 5.50 tires. A feature of the original equipment, is that tire and tube assemblies are balanced and marked for proper valve location, thus reducing danger of front wheel shimmy. Minimum pressure of 34 lb. is recommended for these new tires. Steering gear is substantially the same as on the former Oakland, being of the screw and nut type with 15 to 1 reduction.

The frame is of entirely new design. It is characterized by a kick-up over the rear axle which ends in a downward sweep at the rear of the chassis allowing an additional 1½ in. for height of rear body construction. Side rails have been made stiffer by increasing depth ⅛-in., and using ⅛-in. wider flanges. Heavier cross-members are also used.

Additional lowering of the body has been achieved by using eight leaves instead of the twelve formerly used on the front springs. Length and width remain as formerly. Rear springs, however, have been increased 2 in. in length, now being 54½ in. long. Silicon manganese steel is now used for the rear springs.

Full-crowned fenders, narrow front pillars, lower and more sweeping lines characterize the new bodies on the Oakland All-American Six. Seven body types are offered, with list prices as follows:

Two-door sedan	$1,045
Four-door sedan	$1,145
Landau sedan	$1,265
Landau coupe	$1,045
Sport phaeton	
Sport roadster	$1,075
Four-passenger cabriolet	$1,145

The sedans and the landau coupe are upholstered in mohair, while Spanish leather is used for the open models and the cabriolet. An extremely attractive new instrument panel has been developed, consisting really of three separate panels. The center one has a K & S dash gasoline gage in the center flanked by the speedometer at the left and oil pressure gage and ammeter at the right, all indirectly lighted. At the left of the center panel is the light and ignition switch, with seven positions, the single lever used enabling the lighting of either parking or headlights with or without ignition on. A separate position is also provided for use of the high powered backing light, with ignition on. At the right of the center panel is a panel on which choke and throttle control buttons are mounted. Each of the three panels is finished in oak-leaf design engraving.

Individual features of the various body models are, English type side curtains on the roadster, horizontally folding windshields on the open models, felt packed foot pedals on the closed models, ornamental filler caps on all models, and starter button shifted to toe-board. As usual Fisher VV windshields are used on all closed models. Chromium plating is used aside from radiator and lamp rims, on hood latches, side arms of open car windshields, door handles of open models, and front and rear bumpers. The latter are standard equipment on the landau sedan and sport roadster. Automatic windshield wipers, rear view mirrors, stop and backing light, and dash gasoline gage are standard on all models. Sun visors are furnished on all closed models. Trunk racks are standard on both phaeton and roadster. All sedan models have leather-covered smoking sets, the landau sedan, in addition, having arm rests in the rear compartment. All closed models are fitted with door locks.

Hudson Plant in Berlin

The Hudson Motor Car Co. is establishing an assembly plant at Berlin, Germany, as part of an extensive plan of extending its export business. The new plant will be in operation soon. During the first half of 1927 the Hudson company manufactured 168,336 cars of which 127,651 were Essex, an increase of 35 per cent for this type over the corresponding period, last year.

The BIG LIFT *for your business*

WITH *pride* and *confidence* we introduce the complete line of BLACKHAWK Jacks, Hydraulic Oil Power. Tested for many months against every other type, they have shown themselves unequalled for power, ease of lifting and dependability. In general use for five years under another name on the Pacific Coast, they are now further improved and standardized by BLACKHAWK engineering. The sales potential is tremendous.

BLACKHAWK MFG. COMPANY
Milwaukee, Wis.
U. S. A.

BLACKHAWK HYDRAULIC OIL-POWER JACKS

The "Tourist" Jack shown above is a [illegible]st model that will handle practically all popular cars. A child can do it. Readily placed and removed without getting under car.

The "Hi-Way" double lift Jack is low enough to get under axle, with a lift high enough to handle any and all low slung balloon-tire equipped cars without getting under car. The least hand pressure on handle will raise 4000 lbs. Note the hand-adjustable extension for extra high work.

Every driver is a prospect.

Hydraulic

WITH the little 1½-ton capacity BLACKHAWK Jack a child five years old can raise the average car, evenly, easily, safely.

Jack capacities, as rated by BLACKHAWK, are not maximum. They are based on what one man can lift with ease and safety. Jacks are tested at factory far beyond rated capacity.

The slightest hand pressure lifts many tons. Long bayonet lock handle places the jack at long range under the most difficult axle, low chassis, overhang or platform, without getting under car. Short or long stroke raises load.

A long felt want is filled. Low chassis design, balloon tires and all the ordinary jacking disadvantages of low ground clearance, lose their tire-changing terror for the motorist. A BLACKHAWK lifts so easily.

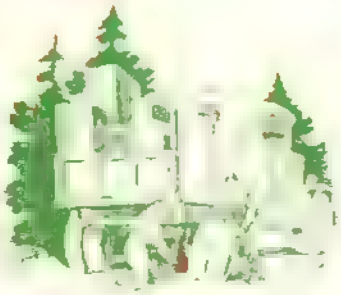
No need for trucks to unload and re-load. No need for busses to discharge. Neither load nor passengers need ever be disturbed. Using a BLACKHAWK soon pays for the jack in time saved and efficient service rendered.

Women use Blackhawk Jacks easily

BLACKHAWK

Oil-Power Jacks

The compact "Motortruck" Jack shown above will easily lift any heavily loaded truck — an easy one man job Simple, safe and dependable.



One lift with a Blackhawk, without removing the load, pays for the Jack Every big truck is a prospect.

Loads are lowered automatically with controlled release valve. The bayonet lock handle opens the release valve for lowering, controls the drop, and withdraws the jack. Lowering is a smooth, quick movement. The operator controls the speed.

The great corporations which are using BLACKHAWK Jacks are conclusive evidence of absolute dependability. Convincing proof comes from the bus field where, in one instance, more than 1,000 BLACKHAWK Jacks have been in service for the past 3 years as standard equipment. This endorsement is the Pickwick Stages System in inter-urban operation—from El Paso, Texas to Seattle, Wash. For this great line of busses, the certainty and speed of BLACKHAWK Jacks have proved of incalculable value in rigid maintenance of on-time schedules.

It is this unequalled power, ease of lifting, ease of control and complete dependability that open wide a tremendous sales potential among motorists, bus and truck operators.

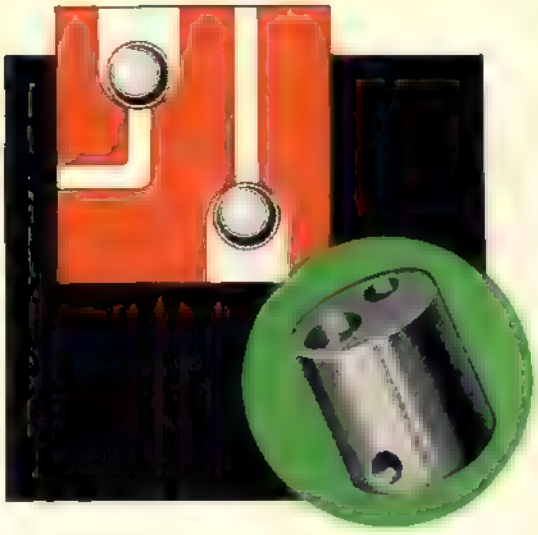
BLACKHAWK MFG. COMPANY, *Milwaukee, Wis.*

The "Motorcoach" Jack for busses and speed delivery fleets lifts seven ons. Easily placed in position Long handle permits easy operation, regardless of overhang or platform Lifts easily, lowers quickly, without effort

Ideal in reach and power for busses

JACKS HYDRAULIC OIL-POWER

The TWIN-CHEK Valve Unit



THIS TWIN-CHEK Valve Unit is the heart of the BLACKHAWK Jack and underlies its success. The entire simple mechanism is revealed in the diagram at the right. Located below the pump (outside the Jack) one minute is sufficient to remove the TWIN-CHEK, clean it or replace it.

TWIN-CHEK (an exclusive, patented BLACKHAWK feature) releases the full advantages of the hydraulic principle applied to Jacks, insuring a sturdy, rugged, trouble-free tool built for years of hard work.

Free Display Shows Jack Operating

This cut out display demonstrates mechanically. With an actual jack placed in position below the axle, the customer can operate the jack handle and see for himself the easy strokes, short or long, required to raise load. The big lithographed car actually rises as the pump is operated, and smoothly lowers automatically by simply opening the release valve located at base of jack. Both pump and release valve operated by means of long handle furnished. This fine dramatic display is typical of the vigor and effectiveness which Blackhawk will bring to bear in merchandising and advertising Blackhawk Jacks. The entire plan and campaign are typical of Blackhawk's aggressiveness.

AIR

~the Invisible Giant

FOR centuries air propelled ships with huge cargoes across the seas. Then man's genius harnessed this giant and put him to work down in the drab pits of industry.

Twenty-one years ago, Brunner began manufacturing garage air compressors. At first they were used only for tire inflation, but gradually their field of usefulness expanded until they operated gasoline pumps and various shop tools as well.

And now Spray Painting, the most profitable use of all, has been perfected by Brunner. Already, Brunner equipment is solving the used-car problem for many dealers throughout the automotive world.

Today this company is the oldest and largest manufacturer of small air compressors. When you buy Brunner equipment you buy the fruits of leadership.

A magnet that draws the motorist and his money that's the American Air-O-Stat and thousands of owners of these modern air-measuring devices have found them the source of their BIGGEST and MOST CERTAIN profit ! !

American AIR-O-STAT

Accurate Air—Brings Customers There

The installation of this tried and tested device means this: Quick air service, no more lost station gauges, a saving of attendant's time, besides ADDITIONAL REVENUE from gasoline, oils and greases that the motorist *buys* because he appreciates the free and accurate service. Remember, filling his tires with air is the one service around a station that a motorist performs himself—so make certain that he can do it quickly and accurately and he will be a friend and a CUSTOMER for all time.

Send the coupon—TODAY—without obligation

The American Oil Pump & Tank Co.

1137 FINDLAY STREET
CINCINNATI, OHIO

Simple of construction simple and "fool-proof" in operation

The POSITIVE ACTION Air-O-Stat operates as follows:

(1) Set dial to amount of air pressure desired. Put chuck on tire.

(2 The air flows and a bell rings continuously while tire is inflating.

(3 When correct pressure is reached the air stops, bell quits ringing.

The American AIR COMPRESSOR

A good, strong, well-made compressor that always delivers the goods. Noiseless operation secured by using plate or disc valves—no hammering. Cylinders are offset from center to crankcase—connecting rods kept straight. Made in 3 sizes.

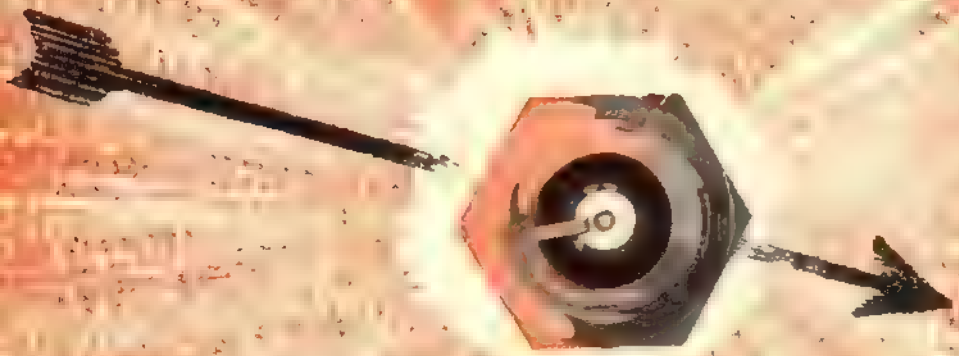
ANNOUNCING
a startling new principle in motor ignition

The MOTO METER SPARK PLUG



IF IT'S A MOTO METER PRODUCT IT'S THE LEADER IN ITS LINE

.....with the *self–*

The greatest achievement
since the invention of the self-starter

THE self-starter was instantly and eagerly accepted by the motoring public, because it *remedied a condition*—supplied a convenience that greatly added to the pleasure of driving.

The Moto Meter Spark Plug is bound to have a public acceptance just as great because it, too, contributes to the joy of quick, easy starting; further . . . it corrects conditions more alarming and vital to the life of the motor. Draining of battery, imperfect combustion, loss of power and many other motor ills are remedied by the self-adjusting spark gap, a feature exclusive with the Moto Meter Spark Plug.

NOW you can offer a spark plug that satisfies completely the demands of easy starting and smooth running, with a proper gap for each condition.

The first real advance
in spark plug design in 20 years

THE Moto Meter Spark plug is the realization of a principle long appreciated in the ignition field—a spark plug with a *self adjusting spark gap*. The advantage of a small gap for starting and a wide gap for running is recognized everywhere — the ordinary spark plug, with but one fixed gap, must necessarily be a compromise: set too wide for easy starting, too short for proper running. Now this condition is remedied — the Moto Meter Spark Plug is *not a compromise*: its spark gap is set cold at 15 thousandths of an inch and when the engine is started, opens instantly to thirty thousandths, thus doubling the length of the spark. When the ignition is turned off, the gap adjusts itself to the original short gap. A single bi-metal strip — a heat responsive electrode — accounts for the self-adjusting feature. Thus, a hot, intensive spark for quick starting and a fat, strong spark for power and smoothness in running. Only in a Moto Meter Spark Plug can this amazing, new principle be obtained, its performance is unfailing.

Priced in line with the market; liberal trade discounts. Investigate; make your spark plug business a real profit earner, not merely an accommodation.

List: for FORDS 75c . . . for other cars 90c. Special for Bus and Truck $1.00

THE MOTO METER COMPANY, INC., Long Island City, N. Y.
THE MOTO METER CO OF CANADA, LTD., Hamilton, Ontario

The name "Moto Meter" is the registered trade-mark and the exclusive property of this company

Designed, built and tested with the same care that enters into the manufacture of the famous Boyce Moto Meter and all Moto Meter products

The MOTO METER
TRADE MARK REG. U. S. PAT. OFFICE

SELF-ADJUSTING
SPARK PLUG

IF IT'S A MOTO METER PRODUCT IT'S THE LEADER IN ITS LINE

adjusting spark gap

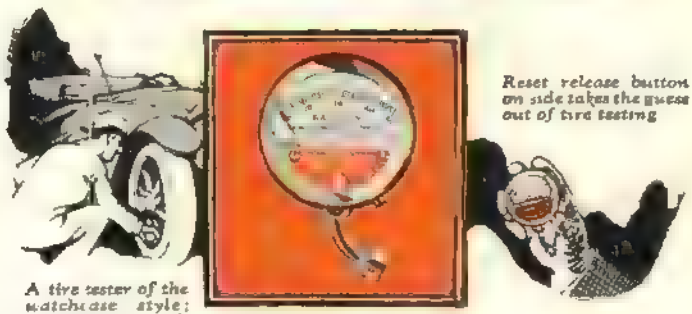
1. Terminal post has two continuous thread sizes—can be used with any type of terminal nut.
2. A gap gauge exactly 15 thousandths of an inch thick is conveniently placed under the terminal nut of every Moto Meter Spark Plug. Easily detached and replaced it simplifies setting of gap to 15 thousandths – for quick, easy starting.
3. Insulator is a new, synthetic chemical material; non-porous with high heat conductivity, almost unbreakable; engine heat will not crack it; great di-electric strength; immune to acids, salts and solvents.
4. Anti-rust shell and coupling nuts beautifully finished; perfectly balanced.
5. Ground electrode is a heat responsive bi-metal product which expands, increasing the spark gap 15 thousandths regardless of engine heat; the wide running gap is constant while the engine is in operation yet adjusts itself to small gap when the ignition is turned off.

Hot, intensive spark for easy starting. Spark gap set cold at 15 thousandths, gap gauge, exactly 15 thousandths thick, furnished with every Moto Meter Spark Plug

Ordinary spark plug gap has no self-adjusting feature; gap set at mean average cannot properly satisfy either starting or running.

Heat-responsive, bi-metal strip used exclusively on Moto Meter Spark Plugs opens spark gap instantly to 30 thousandths, proper running gap.

THE MOTO METER TIRE TESTER



A tire tester of the watchcase style; Scale easy to read.

Reset release button on side takes the guess out of tire testing

Another worthy addition *to the Moto Meter Line!*

ONE of the features of the Moto Meter Tire tester is its simple construction: all geared movements are eliminated and instead, an improved type of Bourdon tube used.

The chromium plate finish combines beauty with durability; the crystal is unbreakable; leather carrying case with each instrument.

Convenient, accurate and dependable; indicator arrow registers and holds pressure figure until released by reset button.

Made in three types: Balloon, Regular and Truck with proper pressure scale for each—same list $1.50 for all models. Stocked by all leading jobbers.

A new Moto Meter Product that will have fast turnover and give generous profits

The MOTO METER COMPANY INC.

LONG ISLAND CITY, N.Y., U.S.A.

Makers of the famous BOYCE MOTO METER *and all types of heat indicators*

Now on the radiator caps of more than 10,000,000 motor cars

IF IT'S A MOTO METER PRODUCT IT'S THE LEADER IN ITS LINE

New Cars and Models

Cadillac's New LaSalle is a V-Type Eight

By W. L. Carver

WITH the advent of the eight-cylinder LaSalle, the General Motors Corporation fills the last open price bracket in the range from Cadillac to Chevrolet. Built and marketed by the Cadillac Motor Car Co. and incorporating the V-type eight-cylinder engine identified with the last fourteen years' history of that concern, the new car is not a small Cadillac but a separate entity. Four years have been spent in development and the result is not a compromise of American and European practice but an individual job of striking appearance and performance.

With a wheelbase of 125 in. and 90 deg. V-eight engine of 3⅛ in. bore and 4 15/16 in. stroke which develops more than 75 hp., the new car shows more than 70 m.p.h. actual maximum speed with commensurate acceleration, flexibility and hill-climbing ability. Frame height is 20 in. and although liberal head room is found in all bodies, the top line of all the body styles is about level with eyes of a person of average height when the car is at the curb. In addition to unusual mechanical make-up and performance, the LaSalle introduces a new two-tone color scheme in which surfaces viewed in any direction are broken up so that an impression of unusual compactness and individuality is conveyed. Hoods and cowls are darker tone than the body proper where in turn the effect is continued by cheat lines at the bottom pillar lines and unusual belt molding effects.

Six body models comprise the line as indicated below:

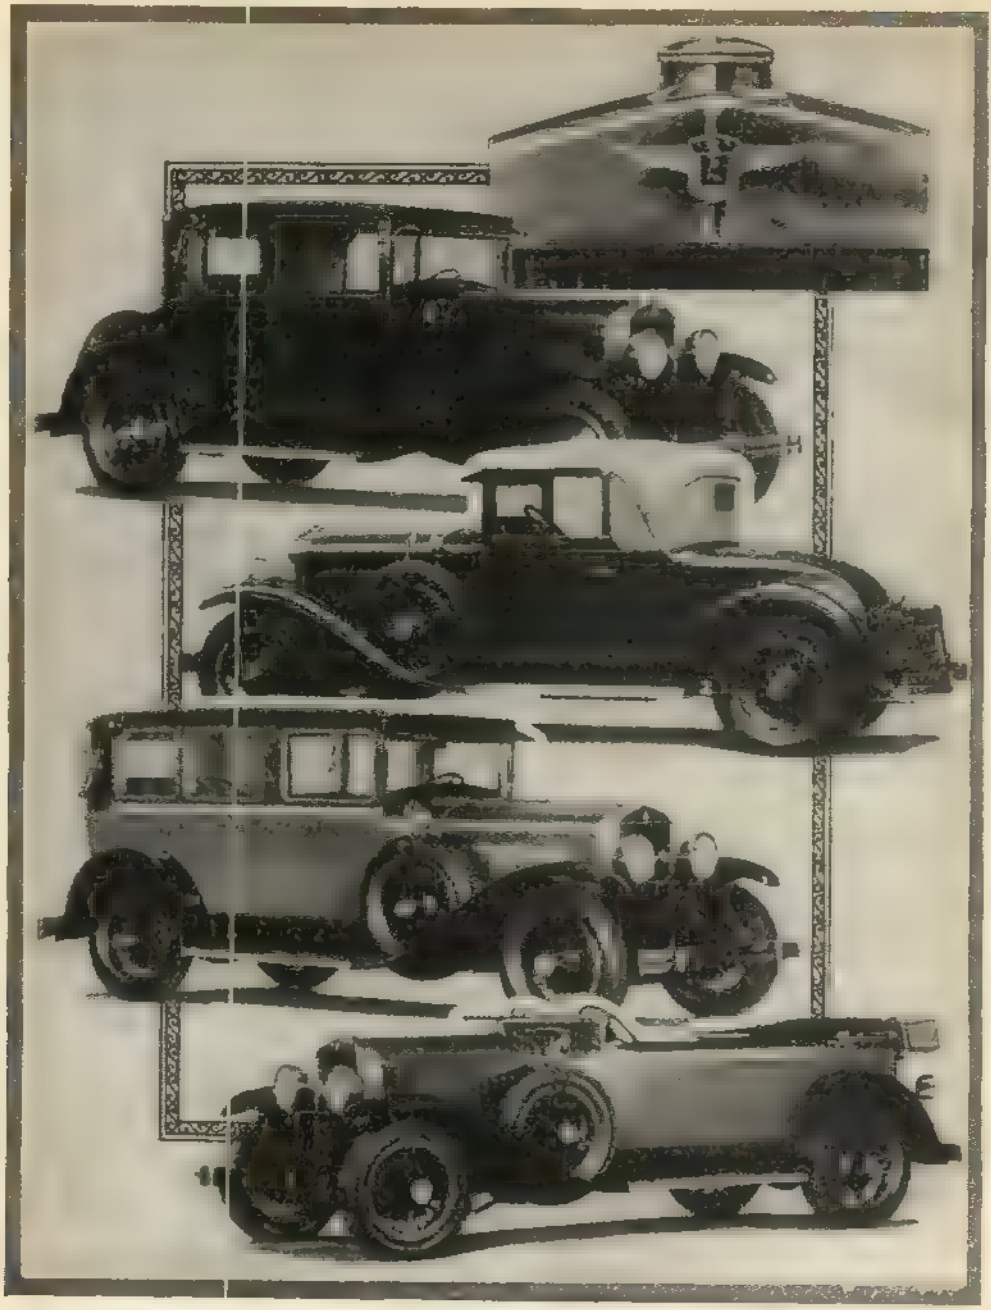
Two passenger roadster with rumble seat	$2525
Five passenger phaeton	$2495
Two passenger coupe with rumble seat	$2585
Two passenger convertible coupe with rumble seat	$2635
Four passenger victoria	$2635
Five passenger sedan	$2685

Particular attention has been paid to the design and appointments of the open bodies as it is believed the market for open cars of distinctive appearance will be a strong factor in this year's quota. Windshields are arranged to fold flat with the top of a wide polished aluminum base which extends clear across the body. Tops also are arranged to fold flat and are equipped with wood bows and polished nickel fittings. While twelve-spoke artillery wheels are standard for both open and closed models, disk wheels are optional and unusual emphasis has been placed on the latter. Present production plans call for the equipment of about 30 per cent of the cars with wire wheels and in this case, two spares are mounted in wells in the front fenders while a folding rack is substituted for the usual tire carrier. Front and rear bumpers are standard equipment on all models.

Completely Equipped

Fisher bodies are used throughout with the V-V windshield fitted to all closed bodies with the exception of the convertible coupe which has a tilting windshield equipped with adjustable nickeled fittings. Closed bodies are trimmed inside in mohair and carry complete equipment suitable for each body type. Typical items are dome lamps, leather covered vanity case, smoking set, foot rest, assist cord, robe rail, arm rests, remote door controls. All interior metal is in Butler silver finish. In addition to the rumble seat for the coupes and roadster, golf bag compartments are included.

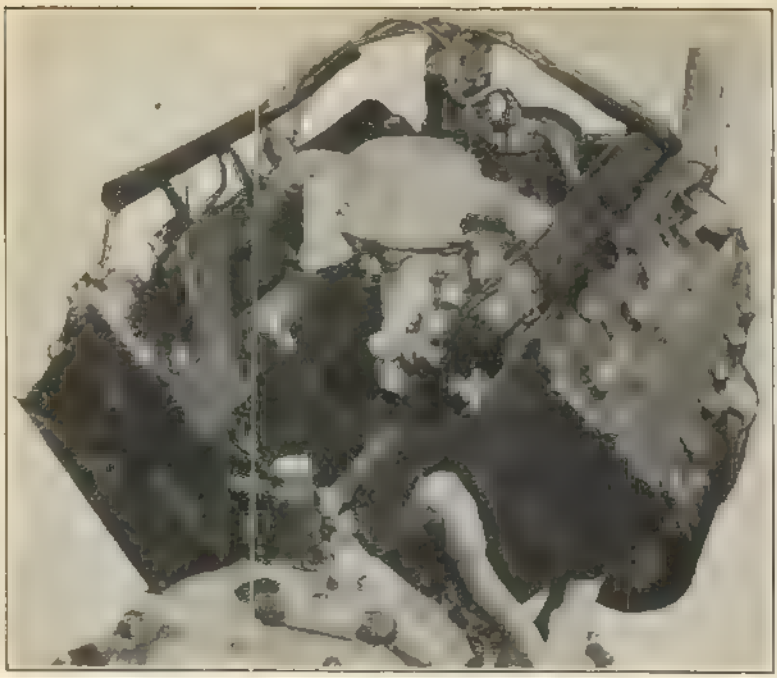
Individual exterior appearance is emphasized by a bead or windbreak effect which is worked into the tips of the fenders and on the backs of the bullet type nickeled head and cowl lamps. A similar effect is continued at the top face of the radiator shell and carried over the top of the low filler cap and along the top of the hood. The radiator is high and deep and relatively narrow with slightly sloping top surfaces. A winged emblem bearing the crest of Sieur de LaSalle is mounted in the triangular



The new LaSalle emblem shown at top right is taken from the old LaSalle coat of arms. The models shown from top to bottom in order are the four pass. victoria, the convertible coupe; the five pass. sedan and the five pass. phaeton

panel at the top front surface. The appearance of depth is amplified by continuing the black enamel appearance of the thermostatic shutters over a great part of the bottom tank of the radiator

Headlamps are mounted on individual stanchions while the cross brace, which also extends to the one-piece full-crowned fenders is interrupted at the center by a LaSalle monogram. At the rear is mounted a combined stop and tail lamp. Both open bodies are fitted with two cowl ventilators which are arranged symmetrically at each side of a conservative arrowhead panel which begins at the top of the hood and blends into the windshield base and belt molding. Three



LaSalle engine with ribbed cylinder heads. The flexible tubing at rear of right block is part of the crankcase ventilating system

standard color schemes including two-tone handling of shades of red, blue and green are optional. The darkest shade is applied to the hood and cowl and extends along the cheat line at the bottom of the body. A dark effect which blends with the Fabrikoid tops is used at the pillars while reveals of light shades surround all windows.

Metal instrument boards are set off by walnut panels, while all instruments are grouped at the center in a die cast aluminum panel equipped with two indirect lights. Included are speedometer, clock, oil pressure gage, gasoline gage and a remote engine heat gage graduated in deg. Fahr. This panel also mounts the carburetor starting control button which is located symmetrically with a similar button for the ignition switch. No lock is used for the ignition but locks are fitted at the doors and at the gear box. Supplementary manual control for the automatic control at the distributor head is by a decorative lever which is mounted on the instrument board immediately ahead of the steering column. At the opposite side of the board is an electric cigar lighter.

All lights including the twin beam arrangement and auxiliary parking lamps in the headlights are controlled by a lever located below the horn button at the head of the steering column.

Tires are 32 x 6 on a 20 in. base. Semi-elliptic springs are used all around and Watson Stabilators are standard equipment. All springs are 2 in. wide while the front springs are 39 in. long and the rear, 58 in. While the front spring suspension is conventional, the rear employs the tension shackles which are characteristic Cadillac practice. As the torque and propulsion are taken through a torque tube equipped with a ball joint engaging with a spherical seat at the back of the gear box, rear springs are shackled at both ends. At the front of these springs, pin type shackles are used, while at the rear, a hardened ball forms the point of attachment between the shackle and the frame.

With the exception of the torque tube arrangement at the rear, axle and brake practice follows present Cadillac practice very closely. The rear axle is three-quarter floating in a built-up steel banjo housing. Ball bearings including a double-row bearing carrying the thrust are used on the pinion shaft while the differential is mounted in taper roller bearings. The standard gear ratio for the spiral bevel driving gears is 4.54 to 1. Ball bearings also are fitted at the axle ends.

Typical Cadillac Brakes

Outside of a reduction of diameter to 14 in., the brakes are typically Cadillac. At the rear equalized contracting bands are foot-operated while internal shoes actuated by an entirely separate system are the emergency brakes. Braking force is equalized between the front and rear. Front brakes are the toggle operated internal band type which are equalized with each other for straightaway operation but compensated for turns.

Although a deep drop is employed at the I-beam front axle, the ground clearance, which is minimum at this point, is 8¾ in. Reversed Elliott construction is used at the axle ends with the king pins slightly inclined and equipped with ball thrust bearings. Front wheels are mounted on ball bearings. Controlled by a worm and sector steering

gear with a ratio of 17.5 to 1, the turning radius is 20 ft.

An offset type of frame, 29 in. wide at the front and 37½ in. wide at the rear, is 6½ in. deep at the middle section and tapers toward each end. Wide flanges are used and the frame stock is 5/32 in. thick. An unusual feature is the reinforcement of ⅛ in. thickness which is incorporated in the front end of each side channel. It is stated the reinforcement of this nature is one of the important factors in the elimination of shimmy.

Seven Cross Members

Altogether, seven cross members tie the two side channels together. A tubular member is fitted at each end of the frame. An intermediate inverted channel is located just back of the gear box and another is placed at the front anchorage of the rear springs. A formed channel is located under the radiator and supports that member and the front ball mounting of the engine. Another channel is placed at the back end of the body adjacent to the 20-gal. gas tank. The seventh cross member is formed by the bell housing feet at the rear of the engine. All channel cross members are gusseted for additional rigidity.

While the engine has all earmarks of Cadillac design, close inspection reveals several pronounced changes from the practice for the larger unit, chief of which are the offset cylinders, location of the starting motor on the lower back of the bell housing, different manifolding, installation of a new vacuum booster pump in the fuel system and slightly different head construction. Characteristic details retained are the four-throw, three-bearing compensated crankshaft, crankcase ventilating system, two-chain arrangement at the front of the engine, and belt-driven fan. A striking feature of the new engine is the wide use of aluminum alloy.

With eight cylinders of 3⅛ in. bore and a stroke of 4 15/16 in., the displacement is 303 cu. in. and the output exceeds 75 hp. at relatively moderate speed. Due to the elimination of the articulated rod arrangement which is standard in the larger engine, the right block is set 1⅝ in. ahead of the left. Assigning odd cylinder numbers to the right side of the engine and even to the left, the firing order is 1-2-7-8-4-5-6-3.

Crankshaft Bearings 2⅛ In.

All crankshaft bearings are 2⅛ in. diameter. Chadwick interchangeable bronze-back, babbitt-lined split bushings which are held in forged copper aluminum alloy caps, range in length from front to rear as follows: 1., 15/16 in., 1⅝ in. with the thrust taken at the rear bearing. As the cast-in lower rod bearings are 1⅝ in. wide and arranged side by side on one throw, the length of the connecting rod bearing on the crankshaft is 2¾ in. The design of the shaft follows that of its larger predecessor very closely. The connecting rod throws are drilled out to 1¼ in. for full length in order to lighten the shaft assembly. Turned copper aluminum shells which incorporate the oil passages are inserted in these holes to complete the assembly. As formerly, the counterweights are bolted on.

Connecting rods are 10 in. long between centers and mount burnished piston pins of ¾ in. diameter in bronze bushings at the upper end. The heads of the rod are turned and the faces of the shank are ground to equalize weight distribution. Lightweight full skirt nickel iron pistons carry three rings above the pin, the lower being a double slotted scraper type in a drilled groove. The detachable cylinder head incorporates the combustion spaces which are designed for high compression and high turbulence. An unusual feature is the use of several small longitudinal cooling fins on the top of each cylinder head casting.

Four-Bearing Camshaft

The camshaft is mounted directly over the crankshaft in four bearings. Three are inserted bronze bushings while the front bearing is in a bolted-in copper aluminum casting which carries the end thrust. Sixteen cams provide individual operation for each valve. Camshaft drive is by a heavy silent chain from the front of two sprockets on the forward end of the crankshaft. As an unusually heavy chain is used, no adjustment is provided in the camshaft drive. At the front the camshaft carries a large pressed steel pulley which drives the six-bladed 20-in. Automotive fan through a V-belt. This fan which includes a plain cast-iron bearing running on a hard shaft with high pressure lubrication by a built-in gear pump is mounted in a slotted bracket arrangement which provides adjustment for belt wear.

Roller type lifters are grouped is assemblies of four in copper aluminum brackets which bolt to the surfaces inclined at 45 deg. to which the cylinders are bolted. The barrel portion of the lifters is light tubular section and the rolls are aligned by projections which engage with slots near the top of the bracket. These projections are located just below the adjusting and clamp screws.

Valves have a clear opening diameter of 1⅛ in. Tungsten and silico-chrome steels are used for the intake and exhaust valves, respectively. Siamesed ports are located at the intake valves while the exhaust ports are individual. Separate intake and exhaust

manifolds are used with exhaust at the front where a header connects both manifolds to the exhaust pipe. A cross manifold which joins the two longitudinal intake manifolds incorporates an exhaust heated chamber. This chamber is connected by slip connections to each of the exhaust manifolds in a manner which allows the entrance of the most heat at relatively low speeds. The vertical carburetor is similar to that used on Cadillac and incorporates thermostatic elements which proportion the mixture according to temperature. Located at the back of the frame, the capacity of the gasoline tank is 20 gal.

While fuel is fed from a vacuum tank on the dash, a vacuum booster pump in the vee near the back of the crankcase assures adequate fuel flow at full throttle opening. This pump is driven by a small eccentric strap from the camshaft. The pump is in a shunt arrangement with the line connecting the intake manifold and top of the vacuum tank. A one-way check valve is placed in the primary or usual line so that the vacuum pump cannot draw from the intake manifold but merely reduces the operating pressure in the vacuum tank to the desired degree during full throttle operation.

Remy-Delco Generator

The air discharge side of the pump which relieves the load on this unit during part throttle operation is connected to the interior of the crankcase.

The regular Cadillac crankcase ventilating system is included in the new design.

A separate silent chain driven by the rear crankshaft sprocket and extending horizontally to the right provides the drive for the generator and water pump. The latter unit is located on the front of an aluminum housing and driven through a flexible coupling from the generator drive sprocket. Both water pump and generator are locked together by a strap which permits them to be swung simultaneously for chain adjustment. The generator is Remy-Delco two-pole type with third brush regulation and is located on the back of the same extension housing which carries the water pump.

A vertical shaft, driven by spiral gears located near the front of the camshaft supplies the distributor drive. This unit made by Delco is mounted on a bracket which extends well up the vee formed by the cylinder blocks. Two breaker arms and a four-lobed cam insure operation at high speeds.

Copper aluminum alloy again is used for the oil pump housing. This unit of the gear type is bolted to the lower side of the front main bearing cap and driven by a vertical shaft which connects with the distributor shaft. A copper tube manifold connects the pump to each of the two rear main bearings while connection to the front is established at the joint between the pump housing and bearing cap. Full pressure is supplied to all main camshaft and lower rod bearings. An AC oil filter is part of the lubrication system. Normal oil capacity of the pan is 8 qts.

The cooling system has a capacity of five gallons. The water pump is located at the right side of the engine, the radiator outlet is at the left side and a rather long hose connection is used to facilitate service work and simplify connections. The pump outlet swings down under the generator and connects to a branch at the midpoint of the right block. On the discharge side of this branch, one leg connects to the right block while the other joins a passage cored across the crankcase for the supply to the left block. Temperature control is obtained by the characteristic shutters at the front of the radiator. A thermostat actuated by the heat at the top tank operates these shutters.

A multiple disk clutch connects the engine and gearbox. Six driven and five driving disks are carbon steel with the latter faced on both sides with asbestos friction material of 7⅝ in. diameter. Driving disks engage the flywheel through the medium of gear teeth while the driven disks contact with six rectangular splines on the forged clutch hub. The gearbox is conventional in every respect with center control of three speeds and reverse. Gear reductions at this point are as follows:

First speed—3.12 to 1	Third—Direct
Second—1.7 to 1	Reverse—3.75 to 1

Operating Noises at a Minimum

Gears are ground and chamfered so that operating noise is reduced to the minimum. In both crankcase and gearbox design, considerable study has been devoted to anti-resonant characteristics. The rear end of the upper shaft assembly carries the speedometer drive gear and back of that unit a universal joint which is inclosed in the spherical housing in which the front end of the torque tube is centered. The gearbox is somewhat more compact than that installed in Cadillac.

An overrunning clutch and positive foot actuation control the starting motor which is placed alongside the gearbox and mounted in the back of the clutch housing.

An Exide 100 am. hr. storage battery is mounted in a pressed steel bracket under the right side of the driver's seat while the space at the left forms the tool box. When fender wells are not utilized for two wire-wheel spares, a rim type carrier is located at the rear. Lubrication of the chassis is accomplished by grease gun.

Adjustment and Maintenance of Stutz Hydrostatic Brakes

By Paul Dumas

ALL models of the Stutz eight-cylinder line of cars are equipped with hydrostatic brakes on all wheels controlled by the foot brake pedal. The actuating fluid is a solution of half alcohol and half water contained in a hermetically sealed system.

Pressure is developed in this system by a plunger linked to the brake pedal. When the brake pedal is depressed the plunger slides into a housing bolted to the side of the transmission case. This housing contains a rubber bellows or diaphragm which is connected to the brake system and filled with the brake actuating fluid. When the brake pedal is depressed the plunger distorts the bellows and builds up pressure in the system. The plunger is approximately 3 in. in diameter. No liquid is in contact with the plunger.

The schematic layout of the brake system is illustrated at Fig. 2.

In each wheel is a brake fluid chamber somewhat similar to a small flat inner tube. This tube is rigidly encased on three sides, the open side corresponding to the tread on a flattened inner tube. Six shoes or segments rest around the circumference of the tube. Six springs and six anchor pins hold the shoes down against the rubber tubes, preventing them from dragging and preventing brake rattle.

When the brake pedal is depressed, the fluid displaced flows through steel pipes and establishes an equal pressure throughout the system, expanding the tubes in the four wheels and pressing the six shoes in each wheel out against the brake drum. The shoes or segments are each restrained from rotating in either the forward or reverse direction by the anchor pins or stops, illustrated at Fig. 2. The entire set of 24 shoes or segments in the brake system is perfectly equalized by the fluid pressure. The pins indicated at Fig. 2 which restrain the shoes from rotating are locked in place by flat laminated springs which hold the shoes against the rubber tube. Each pin is turned to a smaller diameter at its center section and the flat spring fits into the smaller section. The pins are also held in place by a thin head on the outside end and a cotter pin on the inside end.

On the first series of cars the system was similar to the layout at Fig. 2, except that no supply tank was fitted. Later models, however, are supplied with a fluid supply tank to facilitate adjustment.

The methods of adjusting the brakes differs with the two systems and the procedure is explained in the following paragraphs.

On Stutz vehicles equipped with a fluid supply tank which was made regular equipment on cars above No. 83843 and 70161 (and which can be applied to the older models) ordinary adjustment to compensate for wear of the friction lining is accomplished by opening valve N, Fig. 1, unscrewing the plunger knob and pumping a few strokes. The valve is then shut and the brakes are tested. When properly adjusted the brake pedal should pass through approximately half its travel without obtaining any marked brake action. From this point on the pedal should feel quite solid when depressed and maximum brake action should be obtained before the pedal strikes the floor. If too much pressure has been put on the fluid by the pump the brakes will drag or bind. To loosen them it is only necessary to open the valve again and allow it to stand open for a short time which will permit the fluid to pass from the system back into the tank. **The valve is then shut and should remain so during operation of the car.**

Fig. 1—Close-up of dash supply tank

On Stutz cars not equipped with the dash supply tank provision is made at the pedal linkage to restore pedal travel due to worn lining, but this is used mostly as an emergency or road adjustment and will be explained

later. Wherever possible the cars not equipped with dash supply tank should be adjusted by refilling the system as outlined below.

Major Adjustment by Bleeding and Refilling

A "spongy" soft resistance of the brake pedal together with a tendency of the brakes to drag when the pedal is off, and the lack of adequate braking action when the pedal is depressed to the floor boards will indicate there is air in the system. When this condition exists on any of the eight cylinder models the system should be refilled and bled to eliminate air and checked for leakage as described in the following paragraphs.

The operation of refilling and bleeding the brake system is fundamentally the same regardless of whether or not the particular vehicle is equipped with a fluid supply tank. The equipment needed for this operation is not elaborate. Most Stutz service establishments are equipped with a tank as shown at Fig. 3. This is of such construction that will enable it to stand 60 to 80 pounds pressure and it should have a capacity of 10 gallons or more. It is equipped with a large filling cap at the top and with a valve for connecting the air compressor supply hose. An air gage should also be installed at the top. The bottom of the tank should be equipped with an outlet valve and nipple to which is screwed a "Tee" fitting with a nipple and "ell" at each end. A hose line equipped with a shut off valve is placed on each "ell" and the extreme end of each is fitted with a special bleed valve as supplied in each Stutz car tool kit. The other needed item of equipment is a gooseneck stand pipe approximately 18 in. high equipped with a valve as shown. The purpose of the gooseneck shape is to keep out air during bleeding, the principle being the same as incorporated in the conventional wash sink trap.

If the repair shop does not wish to go to the trouble of making up a tank an ordinary hand type tire pump will function in an emergency.

The arrangement of the equipment for bleeding and refilling is illustrated at Fig. 3. The procedure, assuming that the test tank rather than hand air pump is being used is as follows:

1. Fill test tank approximately half full of a mixture of 50 per cent alcohol and 50 per cent water.

2. Allow to stand for at least an hour so as to permit air bubbles to separate from the solution.

3. Shorten the adjustable yoke "y" Fig. 6 at the brake pedal to the limit of its travel. This shortening will bring the bellows plunger to the rear as far as it will go and thus give full capacity to the bellows.

4. Unscrew pipe plug from dash supply tank and insert gooseneck standpipe as shown at Fig. 4. Direct the standpipe into a glass vessel as shown. Connect air compressor line to test tank and when gage on test tank shows 60 pounds pressure, disconnect.

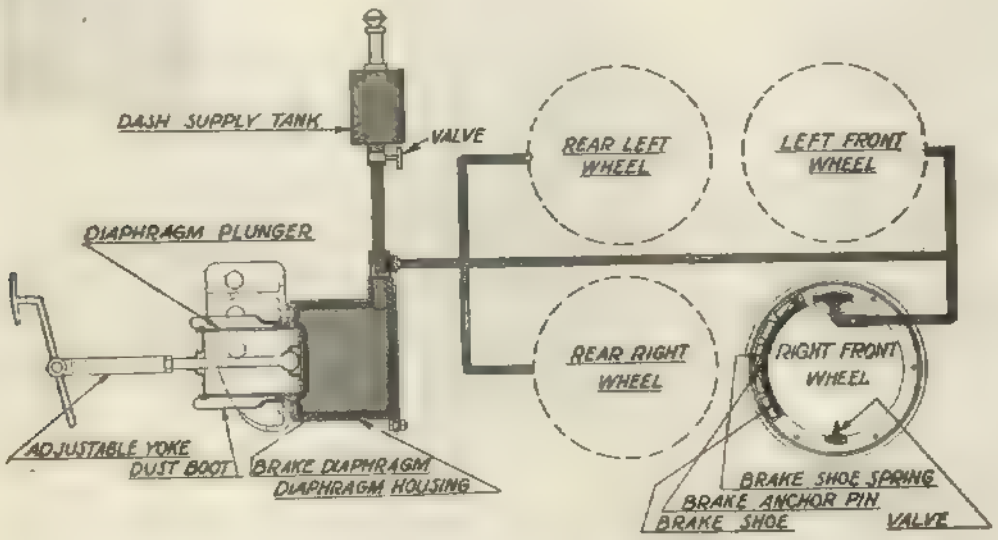


Fig. 2—Layout of circuit Stutz hydrostatic brakes. Although not shown, each wheel carries a rubber expansion element as illustrated on right front wheel

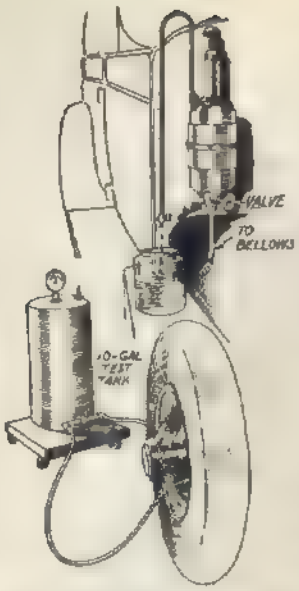

Fig. 3—Arrangement of equipment for bleeding Stutz brakes

5. Now remove dust caps from both front wheel chamber valves and connect the two test tank lines as shown (for one side only) at Fig. 5. The valves are at the lower side of brake housing on front wheels and upper side on rear wheels. Now with both lines attached to wheel chamber valves open the shut off valve at bottom of test tank so as to allow fluid to enter system at the test tank pressure of 60 lb.

6. Open the standpipe valve and allow fluid to pass through brake system until no air bubbles appear in the glass bottle. During this operation the stand pipe valve should be turned off and on, repeatedly "flashing" the system to blow out the air bubbles. When no more air bubbles appear shut off the valves controlling the supply lines and also the valve in the stand pipe.

7. Remove the supply lines from the front wheels and then attach them to the rear wheel chamber valves. Open the standpipe valve and repeat the operation as was done on the front wheels. When air bubbles stop, shut off the valve "N" at Fig. 4; then remove the standpipe and supply lines from wheel chamber. The system will now stand under pressure and this will cause the brakes to be locked.

8. Now bleed or drain off a very small amount of fluid (one to two spoonsfull) from the valve in any one of the wheel chambers until the brakes are free and pedal has movement recommended under instructions for "Normal adjustment" on page 1. Replace all wheel chamber dust caps and check for leaks as outlined under "CHECKING for Leakage."

Refilling and Bleeding on Cars With No Supply Tank

The operation of refilling and bleeding the system as described above applies to the late series cars which were equipped with the dash mounted fluid supply tank. On cars not equipped with the dash supply tank the procedure is similar except the gooseneck bleeder stand pipe is attached to the fitting at top of bellows housing. The valve in standpipe should be flushed to remove air bubbles as described previously and system filled until brakes are locked, then released by draining at one of the wheel valves as previously described.

Refill and Bleed With Hand Air Pump

Fluid may be added to the brake system where it is not necessary to fill the system completely, by means of an ordinary hand tire pump. To facilitate the use of the hand tire pump the standard hose connection should be removed from the end and the elbow bleeder valve which comes as part of the car's regular tool equipment should be inserted instead.

To use the hand pump proceed as follows:

1. Unscrew nut at top of pump barrel and withdraw rod and plunger assembly.

2. Fill pump barrel with a solution of half alcohol and half water. Replace the plunger assembly.

3. Remove dust cap from any one of the wheel brake chambers and attach pump hose. Force the liquid into the system with a single stroke, stopping when the plunger is within three inches of the bottom. The single movement using all but last three inches of the pump stroke is necessary in order to prevent air bubbles from entering the system.

The hand tire pump method is not recommended and the independent repair shop operating in a territory where there are several Stutz cars should construct a test tank for this work.

Fig. 5—Test tank lead connected to one front wheel chamber valve

Fig. 6—The yoke adjustment at pedal linkage, showing variable leverage holes

All of the eight cylinder models are provided with an adjustment to compensate for lack of pedal travel due to wear in linings or loss of fluid. On the cars equipped with the dash supply tank this adjustment is never used but on those cars not so equipped it functions as a road or emergency provision to insure application of the brakes before pedal strikes floor boards. The yoke adjustment is shown at Fig. 6. If pedal strikes floorboards before brakes are fully applied, loosen locknut and turn rod in direction that will lengthen it and thus push the diaphragm plunger closer towards the fluid in bellows. Before filling and bleeding the system for major adjustment always see that this yoke adjustment is shortened to the limit of its travel which means that there will be none or very few threads showing at the locknut end of the rod.

Checking for Leakage

Two methods of checking for brake system leakage are possible. If the test tank outfit is available the test for leakage will be made by attaching one of the supply connections to any one of the wheel chamber valves, and turning on the pressure. Use 60 to 80 pounds pressure and keep test tank valve open while observing for leaks at connections, bellows, and wheel elements.

A simple method which does not necessitate use of the test tank is to use parts of newspapers which may be spread on the floor to cover the entire bottom area of the car. The foot brake pedal is jacked in the applied position and the car allowed to stand for two hours or more. Examine the newspapers carefully after the car has been standing. Leakage of the alcohol water solution will blot the printing and enable the mechanic to easily locate the source of leak. The most frequent source of leakage is loose connections in the brake lines although occasionally a porous fitting may be discovered.

A porous fitting can generally be repaired by sweating with solder as the orifice will be of minute diameter. A possible source of leakage is the valve centers in the brake fluid chambers at each wheel. Valve centers used in these chambers are the short type and particular attention must be given to securing the correct cores for replacement, to avoid the possibility of puncturing the tube with a long type core.

Adjustment of Pedal Pressure

Three different ratios of mechanical linkage between the brake pedal and the diaphragm plunger have been used. Cars numbered up to 80330 were equipped with brake pedals drilled to give a 6 to 1 mechanical ratio. Commencing with car No. 80330 the brake pedal was changed slightly to permit drilling three holes in the pedal, the holes giving, respectively, 4, 5 and 6 to 1 mechanical ratio. Cars numbered from 80330 to 80815 have the diaphragm plunger yoke pinned in the bottom hole giving 4 to 1 leverage. Since car No. 80815 and on all seven passenger cars the plunger yoke has been pinned in the center hole, giving a 5 to 1 leverage. Where complaints of excessive pedal pressure are registered the diaphragm plunger yoke may be pinned in the top hole giving a 6 to 1 leverage. When this change is made it is very essential that the diaphragm housing be realigned to the new yoke position.

The diaphragm housing is held to the side of transmission case by three studs and nuts. The top and bottom holes for these three studs are elongated so that the diaphragm housing may be rocked to the proper alignment for the new yoke position. On a few of the early cars the holes in the diaphragm housing were not elongated and this will necessitate detaching the diaphragm housing and elongating the top and bottom holes. In addition to the vertical alignment of the diaphragm housing it is sometimes necessary to align the housing in a horizontal direction by installing shims between the diaphragm housing and the transmission case to move the housing

Fig. 4—Closeup of dash tank with gooseneck stand pipe installed

to the left, or by dressing off the diaphragm housing pad which fits against the transmission case, in order to move the housing to the right. **The correct alignment of the diaphragm housing is very essential to obtain minimum pedal pressure and this alignment should be checked whenever complaint is made of excessive pedal pressure regardless of whether the mechanical ratio is changed.** The correction of grease and oil leaks as described in the following paragraph is also important in correcting pedal pressure.

Grease and Oil Leaks

To prevent grease from penetrating to the front brakes, a lubricant similar to Pennzoil No. 5 grease should be selected. The wheel bearings must be properly adjusted and the felt packing ring must be in good condition. Oil leaks to the rear brakes may usually be corrected by the use of Pennzoil 650 S Gear Oil in the rear axle. It may also be necessary, after a considerable amount of service, to install new cork packing rings at the inside of the wheel bearings and new leather packings at the outside of the wheel bearings.

Break Squeaks

Brake squeaks or dragging brakes are usually caused by brake shoe springs and pins of the early type which may be defective, or by grease and oil leaks as described above, or by unnecessary openings in the brake shoe housing which should be closed up. Brake squeaks may also be caused by brake lining rivets which come into contact with the drums. The brake lining should be chamfered or beveled on each end and dirt should be removed from the brake lining surface with a steel brush. The brake shoes should fit freely in the channels and should not bind.

Dragging Brakes

Dragging brakes may ordinarily be attributed to defective early type brake shoe springs and pins or air in the brake system. The defective springs and pins should be replaced with new ones of a later type which are procurable from the factory. Air in the brake system can be removed as previously outlined under "Refilling and Bleeding."

General Motors Export Announces Changes

The General Motors Export Co., announces changes in personnel with J. D. Mooney, president, on tour of the assembly operations in South America. R. K. Evans, regional director for Europe, has been elected a vice-president of the company. Robert R. Thien, formerly with the McManus Agency, Inc., has joined the sales department as advertising manager.

M. A. Flannery has been named sales manager and J. A. Morris, supply manager of General Motors South Africa, Ltd. W. R. Fry has been made advertising manager of General Motors South Africa, Ltd.

Electric Roadster Weighs Only 200 Pounds

A miniature 2-passenger electric roadster weighing only 200 pounds, which has a 62-inch wheelbase and will make ten miles an hour, was introduced to the public at the seventh annual Electric Truck Show, in The New York Edison Company's showroom at Irving Place and 15th Street. This roadster is designed for practical service in the city or the country, making short runs to the shops or the club or the beach.

The chassis of the roadster is of the buckboard type, with ash slats, and the wire wheels are supplied with over-size pneumatic tires. An electric motor similar to the starting motor of a gasoline automobile drives the rear wheel by a gear train. The standard storage battery will drive the car twenty to thirty miles, depending on the road, on a single charge. Foot pedals are used to operate both the emergency and service brakes, and also the 2-speed motor control

The roadster is equipped with head and rear lights, a standard size electric horn, and a device which cuts off the supply of electric curent and locks the emergency brake.

Andrews Promoted by Continental Motors

D. A. Andrews has been appointed assistant sales manager of Continental Motors Corp. He has been service manager with Continental for 15 years. His interest in the latter position will be continued in an advisory way. During his connection with Continental he has been closely connected with sales activities.

D. A. Andrews

New Cars and Models

Cadillac's New LaSalle is a V-Type Eight

By W. L. Carver

WITH the advent of the eight-cylinder LaSalle, the General Motors Corporation fills the last open price bracket in the range from Cadillac to Chevrolet. Built and marketed by the Cadillac Motor Car Co. and incorporating the V-type eight-cylinder engine identified with the last fourteen years' history of that concern, the new car is not a small Cadillac but a separate entity. Four years have been spent in development and the result is not a compromise of American and European practice but an individual job of striking appearance and performance.

With a wheelbase of 125 in. and 90 deg. V-eight engine of 3⅛ in. bore and 4 15/16 in. stroke which develops more than 75 hp., the new car shows more than 70 m.p.h. actual maximum speed with commensurate acceleration, flexibility and hill-climbing ability. Frame height is 20 in. and although liberal head room is found in all bodies, the top line of all the body styles is about level with eyes of a person of average height when the car is at the curb. In addition to unusual mechanical make-up and performance, the LaSalle introduces a new two-tone color scheme in which surfaces viewed in any direction are broken up so that an impression of unusual compactness and individuality is conveyed. Hoods and cowls are darker tone than the body proper where in turn the effect is continued by cheat lines at the bottom pillar lines and unusual belt molding effects.

Six body models comprise the line as indicated below:

Two passenger roadster with rumble seat	$2525
Five passenger phaeton	$2495
Two passenger coupe with rumble seat	$2585
Two passenger convertible coupe with rumble seat	$2635
Four passenger victoria	$2635
Five passenger sedan	$2685

Particular attention has been paid to the design and appointments of the open bodies as it is believed the market for open cars of distinctive appearance will be a strong factor in this year's quota. Windshields are arranged to fold flat with the top of a wide polished aluminum base which extends clear across the body. Tops also are arranged to fold flat and are equipped with wood bows and polished nickel fittings. While twelve-spoke artillery wheels are standard for both open and closed models, disk wheels are optional and unusual emphasis has been placed on the latter. Present production plans call for the equipment of about 30 per cent of the cars with wire wheels and in this case, two spares are mounted in wells in the front fenders while a folding rack is substituted for the usual tire carrier. Front and rear bumpers are standard equipment on all models.

Completely Equipped

Fisher bodies are used throughout with the V-V windshield fitted to all closed bodies with the exception of the convertible coupe which has a tilting windshield equipped with adjustable nickeled fittings. Closed bodies are trimmed inside in mohair and carry complete equipment suitable for each body type. Typical items are dome lamps, leather covered vanity case, smoking set, foot rest, assist cord, robe rail, arm rests, remote door controls. All interior metal is in Butler silver finish. In addition to the rumble seat for the coupes and roadster, golf bag compartments are included.

Individual exterior appearance is emphasized by a bead or windbreak effect which is worked into the tips of the fenders and on the backs of the bullet type nickeled head and cowl lamps. A similar effect is continued at the top face of the radiator shell and carried over the top of the low filler cap and along the top of the hood. The radiator is high and deep and relatively narrow with slightly sloping top surfaces. A winged emblem bearing the crest of Sieur de LaSalle is mounted in the triangular

The new LaSalle emblem shown at top right is taken from the old LaSalle coat of arms. The models shown from top to bottom in order are the four pass. victoria, the convertible coupe; the five pass. sedan and the five pass. phaeton

panel at the top front surface. The appearance of depth is amplified by continuing the black enamel appearance of the thermostatic shutters over a great part of the bottom tank of the radiator.

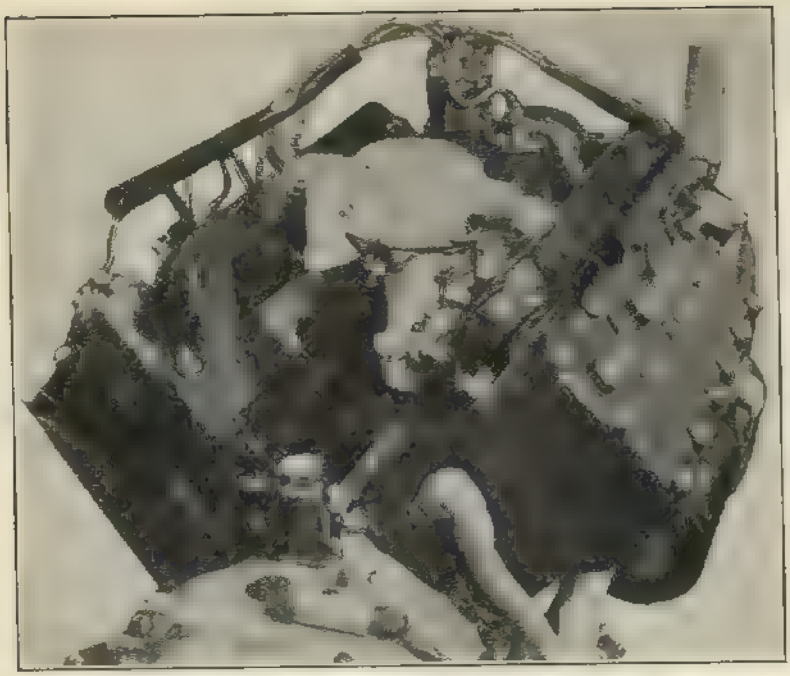
Headlamps are mounted on individual stanchions while the cross brace, which also extends to the one-piece full-crowned fenders is interrupted at the center by a LaSalle monogram. At the rear is mounted a combined stop and tail lamp. Both open bodies are fitted with two cowl ventilators which are arranged symmetrically at each side of a conservative arrowhead panel which begins at the top of the hood and blends into the windshield base and belt molding. Three

There are some things attaching to Cadillac representation which have a great value apart from financial advantage: One is a very real pride in enterprise, which reflects the high character that is Cadillac. Another is the vast confidence which comes with the certain knowledge of Cadillac superiority. Combined, these afford freedom from ordinary competitive difficulties that is rare in the selling of automobiles.

CADILLAC MOTOR CAR COMPANY
Detroit, Michigan - - Oshawa, Canada
Division of General Motors Corporation

New 90 *Degree*

C A D I L L A C



LaSalle engine with ribbed cylinder heads. The flexible tubing at rear of right block is part of the crankcase ventilating system

standard color schemes including two-tone handling of shades of red, blue and green are optional. The darkest shade is applied to the hood and cowl and extends along the cheat line at the bottom of the body. A dark effect which blends with the Fabrikoid tops is used at the pillars while reveals of light shades surround all windows.

Metal instrument boards are set off by walnut panels, while all instruments are grouped at the center in a die cast aluminum panel equipped with two indirect lights. Included are speedometer, clock, oil pressure gage, gasoline gage and a remote engine heat gage graduated in deg. Fahr. This panel also mounts the carburetor starting control button which is located symmetrically with a similar button for the ignition switch. No lock is used for the ignition but locks are fitted at the doors and at the gear box. Supplementary manual control for the automatic control at the distributor head is by a decorative lever which is mounted on the instrument board immediately ahead of the steering column. At the opposite side of the board is an electric cigar lighter.

All lights including the twin beam arrangement and auxiliary parking lamps in the headlights are controlled by a lever located below the horn button at the head of the steering column.

Tires are 32 x 6 on a 20 in. base. Semi-elliptic springs are used all around and Watson Stabilators are standard equipment. All springs are 2 in. wide while the front springs are 39 in. long and the rear, 58 in. While the front spring suspension is conventional, the rear employs the tension shackles which are characteristic Cadillac practice. As the torque and propulsion are taken through a torque tube equipped with a ball joint engaging with a spherical seat at the back of the gear box, rear springs are shackled at both ends. At the front of these springs, pin type shackles are used, while at the rear, a hardened ball forms the point of attachment between the shackle and the frame.

With the exception of the torque tube arrangement at the rear, axle and brake practice follows present Cadillac practice very closely. The rear axle is three-quarter floating in a built-up steel banjo housing. Ball bearings including a double-row bearing carrying the thrust are used on the pinion shaft while the differential is mounted in taper roller bearings. The standard gear ratio for the spiral bevel driving gears is 4.54 to 1. Ball bearings also are fitted at the axle ends.

Typical Cadillac Brakes

Outside of a reduction of diameter to 14 in., the brakes are typically Cadillac. At the rear equalized contracting bands are foot-operated while internal shoes actuated by an entirely separate system are the emergency brakes. Braking force is equalized between the front and rear. Front brakes are the toggle operated internal band type which are equalized with each other for straightaway operation but compensated for turns.

Although a deep drop is employed at the I-beam front axle, the ground clearance, which is minimum at this point, is 8¾ in. Reversed Elliott construction is used at the axle ends with the king pins slightly inclined and equipped with ball thrust bearings. Front wheels are mounted on ball bearings. Controlled by a worm and sector steering

gear with a ratio of 17.5 to 1, the turning radius is 20 ft.

An offset type of frame, 29 in. wide at the front and 37½ in. wide at the rear, is 6⅜ in. deep at the middle section and tapers toward each end. Wide flanges are used and the frame stock is 5/32 in. thick. An unusual feature is the reinforcement of ⅛ in. thickness which is incorporated in the front end of each side channel. It is stated the reinforcement of this nature is one of the important factors in the elimination of shimmy.

Seven Cross Members

Altogether, seven cross members tie the two side channels together. A tubular member is fitted at each end of the frame. An intermediate inverted channel is located just back of the gear box and another is placed at the front anchorage of the rear springs. A formed channel is located under the radiator and supports that member and the front ball mounting of the engine. Another channel is placed at the back end of the body adjacent to the 20-gal. gas tank. The seventh cross member is formed by the bell housing feet at the rear of the engine. All channel cross members are gusseted for additional rigidity.

While the engine has all earmarks of Cadillac design, close inspection reveals several pronounced changes from the practice for the larger unit, chief of which are the offset cylinders, location of the starting motor on the lower back of the bell housing, different manifolding, installation of a new vacuum booster pump in the fuel system and slightly different head construction. Characteristic details retained are the four-throw, three-bearing compensated crankshaft, crankcase ventilating system, two-chain arrangement at the front of the engine, and belt-driven fan. A striking feature of the new engine is the wide use of aluminum alloy.

With eight cylinders of 3⅛ in. bore and a stroke of 4 15/16 in., the displacement is 303 cu. in. and the output exceeds 75 hp. at relatively moderate speed. Due to the elimination of the articulated rod arrangement which is standard in the larger engine, the right block is set 1⅝ in. ahead of the left. Assigning odd cylinder numbers to the right side of the engine and even to the left, the firing order is 1-2-7-8-4-5-6-3.

Crankshaft Bearings 2⅛ In.

All crankshaft bearings are 2⅛ in. diameter. Chadwick interchangeable bronze-back, babbitt-lined split bushings which are held in forged copper aluminum alloy caps, range in length from front to rear as follows: 1., 15/16 in., 1⅝ in. with the thrust taken at the rear bearing. As the cast-in lower rod bearings are 1⅝ in. wide and arranged side by side on one throw, the length of the connecting rod bearing on the crankshaft is 2¾ in. The design of the shaft follows that of its larger predecessor very closely. The connecting rod throws are drilled out to 1¾ in. for full length in order to lighten the shaft assembly. Turned copper aluminum shells which incorporate the oil passages are inserted in these holes to complete the assembly. As formerly, the counterweights are bolted on.

Connecting rods are 10 in. long between centers and mount burnished piston pins of ¾ in. diameter in bronze bushings at the upper end. The heads of the rod are turned and the faces of the shank are ground to equalize weight distribution. Lightweight full skirt nickel iron pistons carry three rings above the pin, the lower being a double slotted scraper type in a drilled groove. The detachable cylinder head incorporates the combustion spaces which are designed for high compression and high turbulence. An unusual feature is the use of several small longitudinal cooling fins on the top of each cylinder head casting.

Four-Bearing Camshaft

The camshaft is mounted directly over the crankshaft in four bearings. Three are inserted bronze bushings while the front bearing is in a bolted-in copper aluminum casting which carries the end thrust. Sixteen cams provide individual operation for each valve. Camshaft drive is by a heavy silent chain from the front of two sprockets on the forward end of the crankshaft. As an unusually heavy chain is used, no adjustment is provided in the camshaft drive. At the front the camshaft carries a large pressed steel pulley which drives the six-bladed 20-in. Automotive fan through a V-belt. This fan which includes a plain cast-iron bearing running on a hard shaft with high pressure lubrication by a built-in gear pump is mounted in a slotted bracket arrangement which provides adjustment for belt wear.

Roller type lifters are grouped is assemblies of four in copper aluminum brackets which bolt to the surfaces inclined at 45 deg. to which the cylinders are bolted. The barrel portion of the lifters is light tubular section and the rolls are aligned by projections which engage with slots near the top of the bracket. These projections are located just below the adjusting and clamp screws.

Valves have a clear opening diameter of 1⅛ in. Tungsten and silico-chrome steels are used for the intake and exhaust valves, respectively. Siamesed ports are located at the intake valves while the exhaust ports are individual. Separate intake and exhaust

manifolds are used with exhaust at the front where a header connects both manifolds to the exhaust pipe. A cross manifold which joins the two longitudinal intake manifolds incorporates an exhaust heated chamber. This chamber is connected by slip connections to each of the exhaust manifolds in a manner which allows the entrance of the most heat at relatively low speeds. The vertical carburetor is similar to that used on Cadillac and incorporates thermostatic elements which proportion the mixture according to temperature. Located at the back of the frame, the capacity of the gasoline tank is 20 gal.

While fuel is fed from a vacuum tank on the dash, a vacuum booster pump in the vee near the back of the crankcase assures adequate fuel flow at full throttle opening. This pump is driven by a small eccentric strap from the camshaft. The pump is in a shunt arrangement with the line connecting the intake manifold and top of the vacuum tank. A one-way check valve is placed in the primary or usual line so that the vacuum pump cannot draw from the intake manifold but merely reduces the operating pressure in the vacuum tank to the desired degree during full throttle operation.

Remy-Delco Generator

The air discharge side of the pump which relieves the load on this unit during part throttle operation is connected to the interior of the crankcase.

The regular Cadillac crankcase ventilating system is included in the new design.

A separate silent chain driven by the rear crankshaft sprocket and extending horizontally to the right provides the drive for the generator and water pump. The latter unit is located on the front of an aluminum housing and driven through a flexible coupling from the generator drive sprocket. Both water pump and generator are locked together by a strap which permits them to be swung simultaneously for chain adjustment. The generator is Remy-Delco two-pole type with third brush regulation and is located on the back of the same extension housing which carries the water pump.

A vertical shaft, driven by spiral gears located near the front of the camshaft supplies the distributor drive. This unit made by Delco is mounted on a bracket which extends well up the vee formed by the cylinder blocks. Two breaker arms and a four-lobed cam insure operation at high speeds.

Copper aluminum alloy again is used for the oil pump housing. This unit of the gear type is bolted to the lower side of the front main bearing cap and driven by a vertical shaft which connects with the distributor shaft. A copper tube manifold connects the pump to each of the two rear main bearings while connection to the front is established at the joint between the pump housing and bearing cap. Full pressure is supplied to all main camshaft and lower rod bearings. An AC oil filter is part of the lubrication system. Normal oil capacity of the pan is 8 qts.

The cooling system has a capacity of five gallons. The water pump is located at the right side of the engine, the radiator outlet is at the left side and a rather long hose connection is used to facilitate service work and simplify connections. The pump outlet swings down under the generator and connects to a branch at the midpoint of the right block. On the discharge side of this branch, one leg connects to the right block while the other joins a passage cored across the crankcase for the supply to the left block. Temperature control is obtained by the characteristic shutters at the front of the radiator. A thermostat actuated by the heat at the top tank operates these shutters.

A multiple disk clutch connects the engine and gearbox. Six driven and five driving disks are carbon steel with the latter faced on both sides with asbestos friction material of 7⅞ in. diameter. Driving disks engage the flywheel through the medium of gear teeth while the driven disks contact with six rectangular splines on the forged clutch hub. The gearbox is conventional in every respect with center control of three speeds and reverse. Gear reductions at this point are as follows:

First speed—3.13 to 1	Third—Direct
Second—1.7 to 1	Reverse—3.75 to 1

Operating Noises at a Minimum

Gears are ground and chamfered so that operating noise is reduced to the minimum. In both crankcase and gearbox design, considerable study has been devoted to antiresonant characteristics. The rear end of the upper shaft assembly carries the speedometer drive gear and back of that unit a universal joint which is inclosed in the spherical housing in which the front end of the torque tube is centered. The gearbox is somewhat more compact than that installed in Cadillac.

An overrunning clutch and positive foot actuation control the starting motor which is placed alongside the gearbox and mounted in the back of the clutch housing.

An Exide 100 am. hr. storage battery is mounted in a pressed steel bracket under the right side of the driver's seat while the space at the left forms the tool box. When fender wells are not utilized for two wire-wheel spares, a rim type carrier is located at the rear. Lubrication of the chassis is accomplished by grease gun.

New Marmon Features High Efficiency Engine

Eight-Cylinder 116 In. Chassis, With Exceptional Riding Qualities, Built in Six Styles, Priced $1795 to $1995

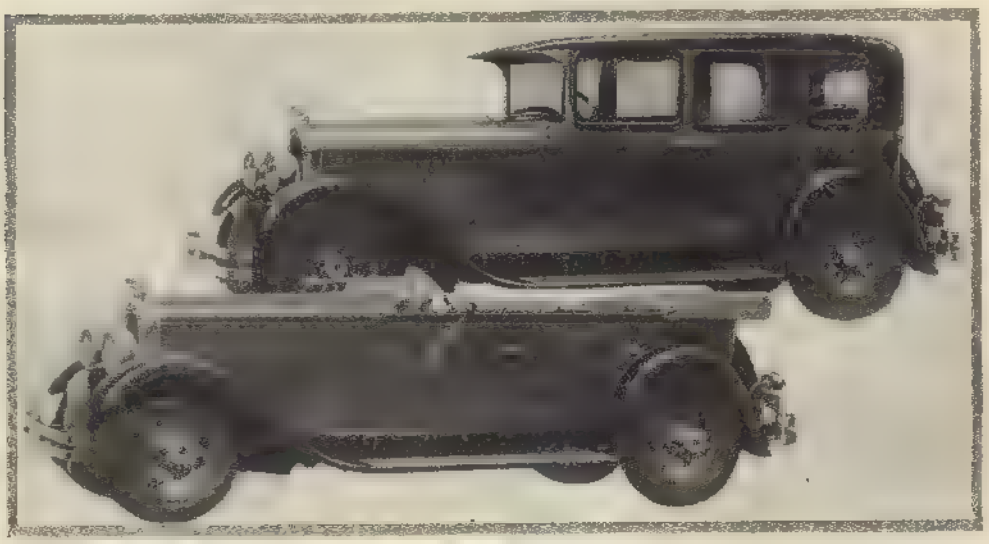
STRIKING appearance, low overall height, exceptional riding qualities and lively performance are among the notable features of the Little Marmon. Six body styles ranging in price from $1795 to $1995 and a complete line of custom bodies are offered on the standard 116 in. wheelbase chassis which is powered with a 2¾ x 4 in. overhead valve, vertical eight engine.

Although the piston displacement of the engine is but 190.1 cu. in., it develops 64 hp. which gives the car a top speed in excess of 70 m.p.h. and good high-gear hill-climbing ability and acceleration. This activity, in combination with the relatively short wheelbase and a minimum turning circle of 36 ft., gives the maneuverability required in traffic as well as high speed for open country driving.

Among the engineering features of the car of particular interest are the provision that is made to supply oil to the cylinder walls as soon as the starter pedal is depressed, a compression ratio of 5.27 to 1, hypoid rear axle reduction gears, details of the frame construction, rubber shock insulators at the springs and three-shoe, mechanical internal four-wheel brakes which function for both service and emergency purposes.

The smart appearance of the various body models is best appreciated by reference to the accompanying illustrations. Their low overall height has been obtained without sacrifice of headroom by designing the chassis to take full advantage of the lowered position of the propeller shaft with hypoid rear axle reduction gears.

The six body styles available consist of a two-door sedan at $1795; a four passenger speedster at $1965; a four-door sedan, two-passenger speedster and two-passenger coupe, all at $1895, and a collapsible coupe



Marmon eight four-door sedan which has a lowerable rear window. Note high sides of the four-passenger speedster body below

All Chrysler models—"50", "60", "70" and Imperial "80" —will be exhibited at the National Automobile Shows; at the annual special model display at the Commodore Hotel, during the New York Show, January 8-15, and at the Balloon Room of the Congress Hotel during the Chicago Show, January 29-February 5. We issue a cordial invitation to you to visit these Chrysler exhibits.

CHRYSLER CORPORATION OF CANADA, LIMITED, WINDSOR, ONTARIO

CHRY

"50 ~ 60 ~ 70 ~ IMPERIAL 80"

Chrysler *now* 4th

Celebrating the Most Significant Record in Motor Car History

Chrysler is in *fourth place* at the 1927 National Shows, where rankings are determined by the sales volume of the preceding year.

In three years, public preference has enabled Chrysler to overtake and pass in volume of sales 23 other manufacturers.

This stupendous honor gained only three years after its debut, comes as the result of a production and sales gain of from 32,000 Chrysler cars in 1924 to the astounding total in 1926 of 170,414 Chrysler cars—"50", "60", "70" and Imperial "80".

The fifty million dollar sales record of Chrysler's first year has grown into a staggering volume of $249,194,940 paid for Chrysler products in the past twelve months.

To thinking car dealers this throws into bold relief the competitive pace Chrysler is setting.

It confirms the far-seeing judgment of the many men of national reputation in the automotive industry who have eagerly sought a Chrysler franchise and are making money with it today.

It heralds the Chrysler line of four models of Chrysler Standardized Quality with 36 body styles, priced from $750 to $3595 as undeniable leaders in the four great quality car markets.

Finally, it demonstrates the futility of fighting Chrysler's success with any lesser car or combination of cars—but rather, the wisdom of sharing in its present and future money-making potentialities.

If you still would grasp this opportunity while it is yet available—write or wire for further details. Your inquiry will be kept in strictest confidence.

S L E R

CHRYSLER MODEL NUMBERS MEAN MILES PER HOUR

Left side Marmon eight engine, showing the triangular belt drive and accessibly mounted distributor. The torsional damper is inclosed within the chain case

roadster at $1995. The last three models mentioned have rumble seats which are operated by a lever in the driver's compartment. In the two and four-door sedans, the rear window may be lowered for ventilation.

Two-tone lacquer finishes are applied to the exteriors of all models. In the closed models the upholstery is Laidlaw broadcloth and in the open cars, leather. Instrument board, cowl panel and garnish moldings are finished in walnut, while the hardware is in nickel and Butler silver.

Returning to the chassis, the engine is assembled with the clutch and transmission in a unit power plant which is supported at four points. To provide straight line drive to the rear axle, the powerplant is installed at a slight angle to the horizontal.

Contributing to the smoothness of the engine are a stiff, five-bearing crankshaft fitted with vibration damper at its forward end and light alloy pistons. The main journals are all 2⅜ in. in diameter and the bronze-back, babbitt-lined bearings which support them have the following lengths: No. 1, 1 17/32 in.; Nos. 2 and 4, 1 1 32 in.; No. 3, 1 25/32 in. and No. 5, 1 15/32 in. The vibration damper is located inside of the timing cover where it is completely protected

Steel connecting rods weighing 28 oz. complete with cap and bushing and with a center to center length of 7¾ in., are employed. The big end bearings are babbitted direct to the steel and are 2⅛ in. in diameter by 1¼ in. long. At the upper end a bronze bushing carries the full-floating, 47/64 in. piston pin, which has its bearing directly in the bosses and is retained by snap rings.

The pistons are of aluminum alloy and weigh 11 oz. each. They incorporate the invar strut construction and are fitted with .001 in. clearance at the skirt. The piston length is 3¼ in. with the center of the pin 1 15/16 in. from the top of the head. There are three rings, all located above the pin, the lowest being an oil control of 3/16-in. width. The two upper ones are ⅛ in. wide.

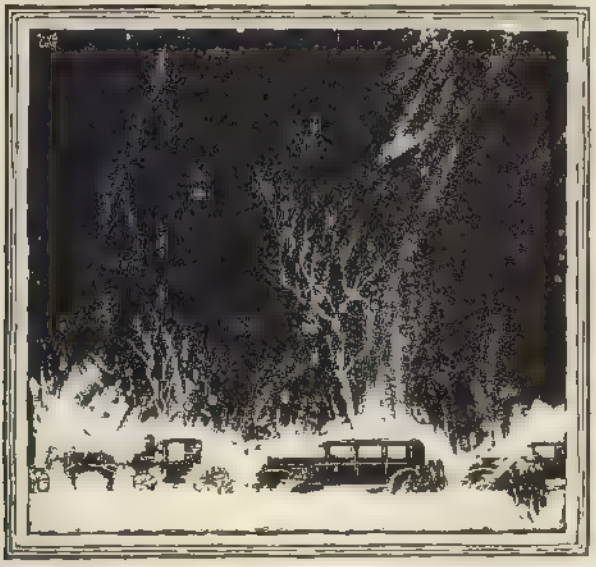
A silent chain, 24 in. long by 1¼ in. wide with 64 links, drives the camshaft which is supported in five bronze-back, babbitt-lined bearings. The valves are operated through mushroom tappets, assembled in two groups of eight, in the conventional manner. There are two rocker shafts, both being drilled axially for lubrication and the ducts thus formed are connected through the two central rocker shaft pedestals by a length of tubing.

The valves operate in pressed-in guides. The inlet is of the tulip type and is made of chrome-nickel steel. It has a nominal diameter of 1 3/16 in. and a lift of 21/64 in. Silchrome exhaust valves of 1 in. diameter are employed, the lift being the same as for the inlet. The firing order is 1-6-2-5-8-3-7-4 and the valve timing as follows: Inlet opens, 6 deg. B.T.C.; inlet closes, 40 deg. A.B.C.; exhaust opens, 40 deg. B.B.C.; exhaust closes, 6 deg. A.T.C.

Both the generator and the fan are driven by a V-belt from the forward end of the crankshaft. The fan hub and pulley are integral and are supported on two ball bearings.

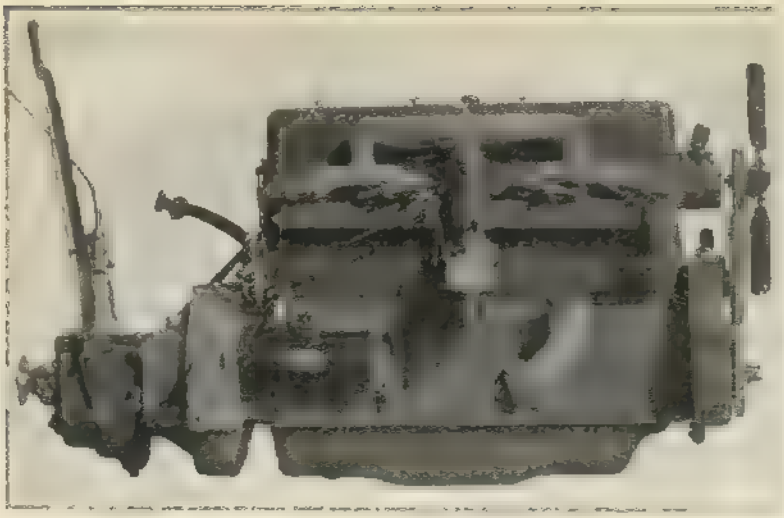
The starter pedal is mounted on a transverse shaft which operates the mechanical starter shift at its right end and a valve in the external oil line to the rocker shaft at its left end. This latter action is accomplished by means of a pin at the left end of the shaft which operates a lever which in

ONE OF THE IMPRESSIVE FACTS IN THE AUTOMOBILE INDUSTRY TODAY IS THE LEADERSHIP, IN PRACTICALLY EVERY PRICE CLASS, OF CARS EQUIPPED WITH BODY BY FISHER



FISHER BODIES

GENERAL MOTORS



Right side Marmon engine, showing down sweep type of inlet manifold. The auxiliary piston oiling mechanism is controlled by an arrangement of rods connected to the starter pedal cross shaft as shown

turn opens a valve. Opening this valve connects the oil pump to a duct milled on the inner surface of the valve tappet bracket. Holes near the bottom of each cylinder lead from this duct to the cylinder walls. In this way the possibility of damage to the cylinder bores through lack of lubrication when the engine is started in cold weather is avoided and, at the same time, there is no over lubrication, the additional oil being provided only while the starter is in operation.

Oil is drained from the crankcase by means of a poppet valve operated by a plunger from above. An oil filter is located on the dash.

Starter, generator, coil and distributor are all of Delco-Remy make. The distributor is of the double contact, four-point cam type and provides 20 deg. of manual and 25 deg. of automatic advance. The battery is a six-volt Prest-O-Lite.

Fuel is supplied to the Wheeler-Schebler 1¼-in. carburetor by a Stewart vacuum tank from a 12-gal. tank at the rear.

Power is transmitted to the semi-floating rear axle through a single plate clutch and three-speed transmission and propeller shaft with oil-tight universals at each end. The clutch shaft is piloted in a roller bearing at its forward end and is mounted in a ball bearing at the rear. The throwout bearing is also an annular ball. The transmission ratios are 3.07, 1.76 direct, and 4.02 in reverse. The main shaft in this unit is carried in ball bearings while the countershaft gears are bushed.

The hypoid reduction gears in the rear axle may be had with ratios of 4.7 or 5.1 to 1. Ball bearings are used at the pinion shaft and differential. The front axle is of I-beam section with reverse Elliott ends. A Ross cam and lever steering gear with 17-in. diameter wheel is employed.

All four brake drums are 12 in. in diameter and 2 in. wide. As mentioned previously, the one set of brakes functions for both service and emergency use. The linkages, however, are so designed that if the brake on one wheel does not operate, the other three will continue to function with normal efficiency.

Semi-elliptic springs mounted in rubber shock insulators are used front and rear. The respective lengths are 38 and 56 in. and the widths 1¾ in. Chrome vanadium steel is employed in the master leaves, the others being of carbon steel.

The frame has a number of interesting features. One is the cross member at the rear of the transmission through which the propeller shaft passes and another is the mounting of the front tubular member. The supports for this tube are integral with the housing for the rubber insulators. The frame is a straight tapered design with a kick up over the rear axle and arched at the front to provide additional vertical clearance for the front axle. The side rails are of channel section, pressed from ⅛ in. stock, and have a depth of 6 in. Wood wheels fitted with 29 x 5.25-in. four-ply tires are regular equipment.

Equipment furnished on all models includes automatic windshield cleaner, dash type cooling system thermometer, electrically-operated dash gasoline gage, front bumper, fender guards, rear traffic signal, cowl lights, double filament headlamps with control on steering wheel, transmission and tire locks, door locks on closed cars, four Lovejoy hydraulic shock absorbers, electric clock, cigar lighter, Fedco numbering system and two-part rear view mirror.

Ready for 1928

New Colors • Greater Luxury Finer Performance in the • • • Willys-Knight • • •

With rich, new color harmonies, beautiful and luxurious interiors, and a new degree of lively pickup and smooth, surging power, the Willys-Knight line anticipates the higher standards of 1928.

The patented Knight sleeve-valve engine is the only great advance in motor construction which is exclusively controlled by one organization. It affords the live dealer a powerful advantage over competition. The Willys-Knight line includes two brilliant Sixes, the "70" and Great Six, ranging from $1295 to $2695. It assures big profits in this price field, now and for years to come.

The Perfected Whippet Forecasts the Trend for the Year Ahead

Every recent new car announcement serves to emphasize the Whippet's leadership in engineering design. In this remarkable car are to be found the leading features that will characterize all light cars of the future.

It is important to remember, however, that steady refinement and improvement of the Whippet go on, while other manufacturers endeavor to cut down the Whippet's tremendous lead.

Whippet dealers occupy an enviable position for 1928. They have a car *of proved superiority* in the biggest price class. The Whippet and Whippet Six range from $625 to $925.

Write for particulars today. Sales Department, Willys-Overland, Inc., Toledo, Ohio. Willys-Overland Sales Co., Ltd., Toronto, Canada.

FINE MOTOR CARS

An advertisement directed to the dealer in small territories

Are the $2500-$3000 Car Buyers Going to Your Competitor?

RETAINING present owners on his lists is one of the most pressing problems of the automobile dealer in small territories. Especially where the car handled is low-priced. Owners are constantly "growing up" financially—passing on to higher-priced makes. Some one else profits.

More and more, progressive small dealers are meeting this situation in the only way it can be met: by extending their line to keep pace with their owners. What are *you* doing to round out *your* line?

Dividing the motor car field into $500 units, one peculiarity stands out. And that is this: in the class between $2500 and $3000—logically the best-selling section of the fine car field—there are *fewer competitors than in any other.* More than that, Franklin has long been one of its three sales leaders. And only Franklin *completely covers* the field.

In general, you know the fine reputation and sound financial standing of the Franklin Company—the popularity of the new de Causse-styled models, especially at the new prices—the unusual number of dealers who have handled Franklins for many successive years without a break—the high proportion of repeat sales that Franklin enjoys.

Interesting information about this modern dealer trend toward a well-rounded line will be sent you on request.

Air Cooled

Buick Generator May Have Slipping Clutch

Editor, Automobile Trade Journal:

Would like to ask you for some information on a Buick generator which is giving me trouble. When the motor is idling the generator works good and charges 10 amp but when you speed up the motor it will turn loose and show a discharge of about 20 amp. I have set up the brushes and increased the spring tension. That helped some but it still does the same thing, but not so badly. The wiring is all in good shape and the brushes are good. This make of car has a Delco system and is a 1923 model car. Do yo uthink that it is possible that the clutch is worn out or do you think that the brush springs are weak? I was not able to find new brush springs so I just set the old ones up as well as I could. This helped but did not help it entirely. Please advise me what to do.—W. R. Cupp, Maryville, Tenn.

It is possible that you have the ammeter wires reversed on this car which, in connection with the system of wiring which does not incorporate a cut-out, would give you conditions outlined. We would suggest that you turn on the lights with the engine stationary, that is not running, and note whether or not the ammeter hand moves over to the discharge side. If it does it indicates that the ammeter is correctly wired. If it does not it will be necessary to reverse the wires or remagnetize the meter so as to give the opposite polarity. Would also suggest that you operate the engine at a speed approximating 900 r.p.m. and then note whether the armature of the motor generator is turning at approximately the same speed as the drive shaft which incorporates the clutch. If there seems to be a difference in speed, chances are that the trouble is due to the clutch slipping which would account for the discharge. The brush pressure may be incorrect so it will be advisable to hold down on the brushes to increase the spring tension and then note whether or not the output increases. If so, this will indicate either weak springs or an eccentric commutator.

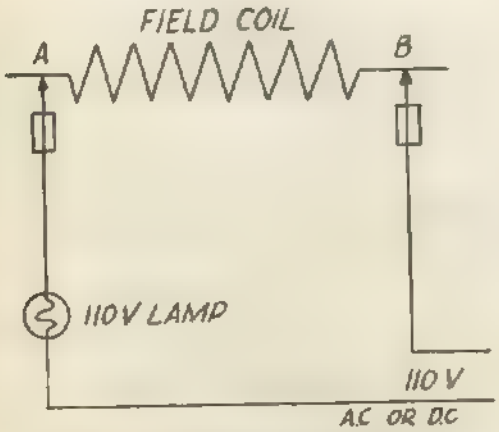

Fig. 55—Testing for open circuit in field coil

Would also suggest that you go over all connections carefully for a ground which may show up only when the engine is turning at a fairly high rate of revolutions.

2 I have a 1925 model Star that the generator won't work. I have overhauled it and installed brushers and wire but it will not show a discharge over 2 amps. It will charge that amount all right but that is all. The ammeter is all OK.—W. R. Cupp, Maryville, Tenn.

We would suggest this generator be removed and tested on a good test bench.

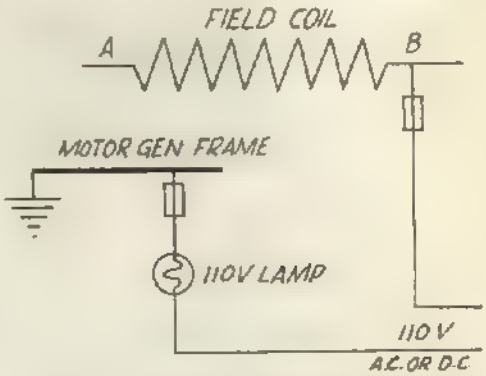

Fig. 56—Test for grounded field coil

The first test is to determine whether or not the unit is defective and consists in connecting the generator terminals to a six-volt storage battery and note the shunting or motoring operation. If the armature rotates slowly and with an even torque it is safe to assume that the generating qualities of the unit are good. If the armature does not rotate steadily or if no rotation occurs, or if a rapid turning of the armature takes place, there is some trouble either in the armature or field coils. Further tests should then be carried out with test points and lamp or a growler.

Test for Open Circuit

To test for open circuit in the field coils use the test points as shown in Fig. 55, by placing one point on each terminal of the particular winding to be tested. If the lamp fails to light it shows the coil is open circuited. If the coil is open circuited it will be necessary to have it repaired or replaced.

To test for grounds place one test point on the frame of the generator and the other one on the terminal of the field coils. If the lamp lights it will indicate a ground. This test is illustrated at Fig. 56. Providing the fields test O.K. we would suggest that you remove the armature and have it tested on a growler for shorts or opens. This will be the quickest and most accurate method. We would also refer you to page 55 of the February, 1926, issue of the AUTOMOBILE TRADE JOURNAL, which gives trouble shooting directions on starters and generators.

Dodge Brothers Officially Announce a New Chassis Model

DODGE BROTHERS, INC., will introduce a supplementary line of higher priced cars about July 1, E. G. Wilmer, president, announced to dealers at the company's annual convention. Mr. Wilmer did not divulge the type of engine or any specifications of the new car but said it would be in production in several months.

Under plans of the company it is understood that the present line will continue to be the main production effort, with the new car made in somewhat smaller volume. The lines will be handled jointly by Dodge Brothers dealers, who, Mr. Wilmer said, have been requesting the factory for a companion line which would embody all the fundamental features which have made possible the success of the present type.

Additional improvements on the Dodge Brothers cars over those announced recently were found on the models exhibited at the New York show

In place of the multiple disk clutch previously used, a single plate unit is now adopted. It is provided with a three-bolt form of adjustment and a special type of push operated throw-out bearing, the latter being oiled from a special fitting conveniently located on the floor board.

With the adoption of a new method of supporting the rear of the engine, the clutch and transmission can now be removed without disturbing the rear engine supports. Formerly, pressed steel rear engine supports were used, whereas on the latest cars cast-iron arms formed integral with the bell housing are now employed. The ends of these arms are bolted to plates riveted to the chassis side rails.

Six splined ends are now used at the front end of the propeller shaft and at the inner ends of the two axle shafts in place of the square shanks formerly employed. This design is said to give less backlash than the previous squared type. In addition to the adoption of a new type muffler, the steering spindles are now provided with ball thrust bearings to make for easier steering. On the standard sedan a soft top type of roof construction has been adopted wherein the sun visor is now formed integral with the roof and curved over the windshield. With this new style of construction the sedan is said to have been lowered about two inches in height with a consequent improvement in appearance.

Improvements Made on Star Six

A NUMBER of detail refinements giving improved appearance, comfort and convenience have been made by Durant Motors, Inc., in its line of Star Six bodies and a self-adjusting spring shackle has been adopted. The Star Four line is continued without change.

Among the improvements in the Star Six is a new walnut finished, steel instrument board with the instruments attractively grouped in a panel under a single glass. This panel is indirectly lighted by a bulb which is controlled by the main lighting switch. The steering wheel now has a walnut rim with walnut finished spider while the spark and throttle levers have been moved to the top of the column and are of the wing type. In the closed models, remote type door handles have been adopted and they serve also as pull-to's. In addition, they operate the door locks by moving them upward. Bullet type head and cowl lamps are standard on all models. The cowl rail is finished in walnut as are the door panels on the de luxe models. All closed bodies have carpet mats with rubber heel pads in the front compartment. Seats, doors and ceilings are finished in two-tone velour.

The six-cylinder landau and sedan have pockets in the rear doors, and robe and foot rails. The former model and the sport coupe also have walnut finish garnish rails, onyx balls on gearshift lever and nickeled hand brake lever handle. The landau also is fitted with vanity and smoking sets. The sport roadster and sport coupe have rumble seats finished in Spanish leather, aluminum steps, luggage rails, and a lowerable rear window in the coupe. The sport roadster is lacquered in gray green below the belt and apple green above while the landau is finished entirely in dark gray except for the black fenders and aprons.

Elcar Announces New Lower Priced Eight

TWO eights and a six make up the Elcar line for 1927. One of the eights, the 8-82, is an entirely new model and is smaller and lower priced than the improved 8-90 which takes the place of the former 8-81. The six is designated as the 6-70 and succeeds the model 6 65.

Included in the body models available on the 8-82 chassis are a four-door sedan at $1790; a four-passenger, two-door coupe brougham equipped with trunk at $1595; four-passenger landau convertible coupe with rumble seat at $1870 and a seven-passenger touring car.

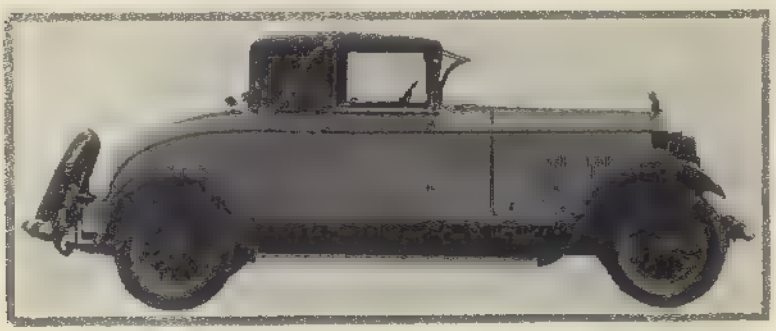
The 123-in. wheelbase chassis is powered by an eight-cylinder 2¾ by 4¾ in. Lycoming engine with a five bearing crankshaft fitted with Lanchester damper, full pressure lubrication, Swan manifold and 1¼ in. carburetor, Delco-Remy electrical equipment, oil purifier, gasoline strainer and thermostat. Oil pressure is varied automatically with the load by an interconnection with the throttle.

All main bearings are 2⅜ in. in diameter, the lengths from front to rear being 1¾ in., 1½ in., 1⅝ in., 1½ in. and 1¾ in. The three camshaft bearings are 2 in. in diameter, the front one being 1 7/32 in. long, the center one ⅞ in. long while the rear one is 1 11/16 in. long. Pistons are cast iron fitted with four ⅛ in. rings, the lower one being a Perfect Circle oil control type. Valve diameters are 1⅜ in. for the intake and the exhaust valve is 1 17/32 in. in diameter, both having a lift of 11/32 in.

The ⅞-in. diameter piston pins operate in bronze bushings, with a total bearing length of 2 9/16 in. Connecting rods are 9½-in. center to center.

The engine cylinders and the upper half of the crankcase form a single casting and the detachable head is of the turbulence type. The camshaft is chain driven while the generator and fan are operated by separate Vee belts. The power plant is supported in rubber at four points and this feature, combined with the Belflex spring shackles and the body construction, contributes much to the quietness of the car.

A Long 10-in. clutch and a Warner transmission are employed, the latter having the following ratios: Low, 3.114; second, 1.69; reverse, 3.78. Other units are Salisbury semi-floating rear axle, Lockheed external four-wheel brakes operating on 14 x 2-in. drums and Ross cam and lever steering gear. The emergency brake is on the driveshaft and operates on a drum 8 in. in diameter and 2 in. wide. Semi-elliptic springs are used front and rear, the latter taking the rear axle torque and propulsion. The front springs are 2 in. wide and 37¾ in. long, while the rear springs are made of ¼ in. wider stock and are 55⅞ in. long. The frame with channel side members of [illegible] by 5/32-in. stock has four [illegible] members and two of [illegible] equipment includes Lovejoy [illegible] shock absorbers, Bowen "One Shot" chassis lubricating system, combination tail, stop and backing light, rear view mirror, radiator ornament, Moto Meter, dash gasoline gage, twin beam headlights and automatic windshield wiper.

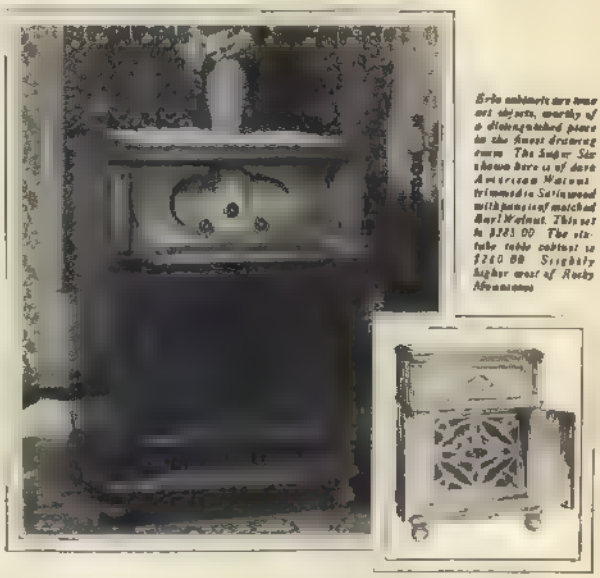


Elcar landau roadster on the new 8-82 chassis

The Outstanding Radio Line for a Profitable 1927

The ERLA SUPER-SIX [RFL] RECEIVER

The crowning achievement in radio for 1927 is the new Erla R F L Super-Six—a six-tube completely shielded receiver with true one-dial control. Reproducing units perfected to the highest limit which deliver broadcast entertainments so faithfully that all former standards of reception have been revised. Surpasses any new type phonograph in quality of reproduction and volume. To appreciate how far advanced this new receiver is over other types, we invite you to compare the Erla Super-Six with any other receiver or phonograph.



Erla cabinets are true art objects, worthy of a distinguished place in the finest drawing room. The Super Six shown here is of rare American Walnut trimmed in Satinwood with panels of matched Burl Walnut. This set is $285.00. The six-tube table cabinet is $260.00. Slightly higher west of Rocky Mountains.

OFFERS YOUR CUSTOMERS ADVANTAGES THAT ARE YEARS AHEAD

Here is your chance to "scoop" your competitors and "cash in" on this new receiver; a chance to get in on the ground floor and take out the big profits while others are getting ready to follow our lead.

The Super-Six operates on an antennae from one foot to 100 feet in length, or on a loop. In its ability to bring in distant stations, it eclipses any receiver ever made. It is super-sensitive yet simple to tune, and squeals and howls are banished forever. It is not critical. The RFL circuit has been perfected to its highest efficiency by Erla engineers and this new receiver is so easy to tune that a child can get distant stations with greatest ease.

In the reproducing elements the Erla engineers have outdistanced the entire radio field. The new Erla Omnitonic unit reproduces all tones of the musical scale. The Erla Concert Grand Audios are the most costly instruments of their kind ever used in any receiver. These in combination with a 92" air column horn will reproduce any instrument, note or harmonic that the human ear has ever heard and reproduce them with volume and faithfulness.

Here is the simplified radio that thousands have been waiting for; as easy to tune as winding a watch—a receiver that makes the novice an expert in getting distant stations. Here is a rare opportunity—a receiver that is so outstandingly superior that it makes others obsolete and opens new fields for sales development—an opportunity that will put you a year ahead of competition if you take advantage of it now.

Sign and mail the coupon and let us tell you about the most valuable sales franchise in radio. But don't put it off. The established Erla policy is to give dealers restricted territories. Only one dealer in each community will have this opportunity; so if you are interested in making more money, sign and mail the coupon for full particulars today.

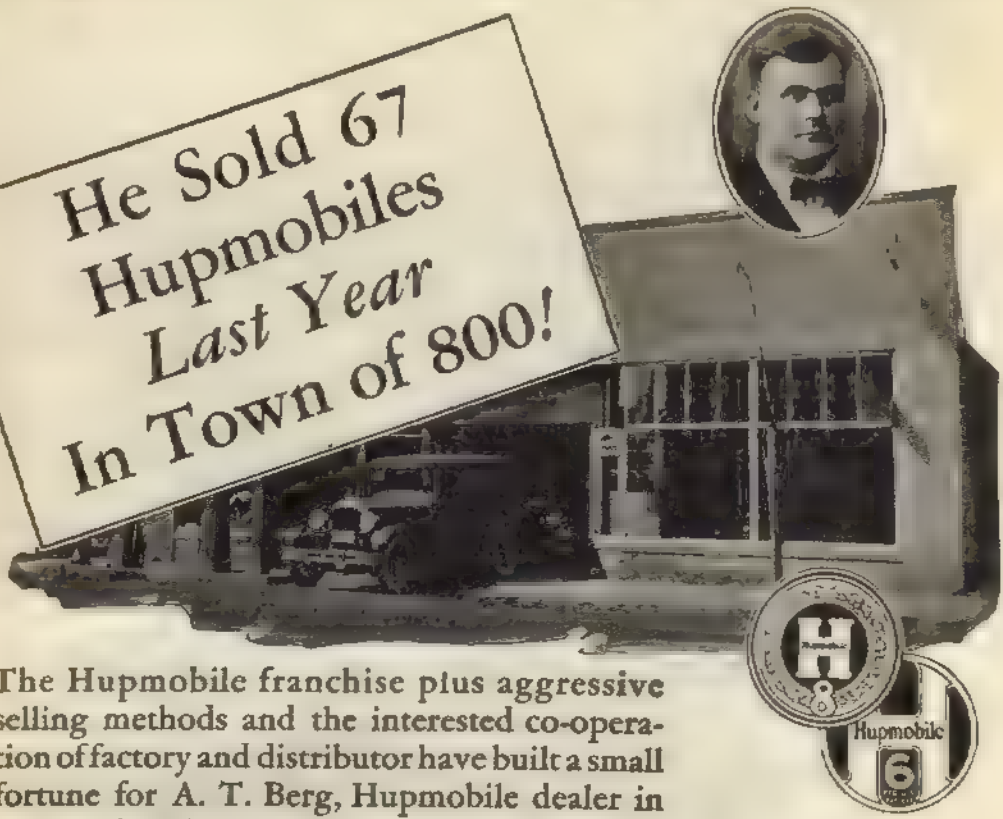
HUPMOBILE DEALERS MAKE MONEY

He Sold 67 Hupmobiles Last Year In Town of 800!



The Hupmobile franchise plus aggressive selling methods and the interested co-operation of factory and distributor have built a small fortune for A. T. Berg, Hupmobile dealer in McIntosh, Minnesota.

"When I started in business in 1922, I owed something like $15,000," writes Mr. Berg. "Today I do not owe a dime and have property and cash assets of $40,000—all made through the sale of Hupmobiles."

Mr. Berg owes his success both to the splendid reputation of Hupmobile in his territory and to the intensive selling campaigns he has carried out in the town of McIntosh and nearby communities. How well Hupmobile stands in his district is shown by his record of 45% repeat sales to former Hupmobile owners.

"Hupmobile is the best car I have ever sold, and the Hupmobile contract is the fairest I have ever worked under. Your co-operation has been 100% at all times."

August T. Berg,
Prop., City Garage,
McIntosh, Minn.

Alike in big cities and rural communities, the Hupmobile contract has proved a source of profit to enterprising business men. We will gladly forward full details of the Hupmobile selling plan to interested merchants, upon request.

HUPP MOTOR CAR CORPORATION

HUPMOBILE
EIGHTS & SIXES

THE DIXI IS ONE OF GERMANY'S TIMKEN-EQUIPPED CARS. IN THE BACKGROUND, WARTBURG CASTLE

Dixi

The sheer volume of Timken business, the universal acceptance of Timken Bearings, and broad Timken advertising are behind every Timken-equipped make of motor vehicle in this country. But what started all of it was the matchless ability of Timken Bearings to improve performance and endurance. Europe is right now repeating this history. In Germany, elsewhere on the continent, and in England, the chief sales effect of Timken Bearings comes directly from better engineering, operation, and economy. Thus the Timken name in Europe acquires its invariable meaning, and Timken Bearings are adopted more and more rapidly To supply Europe there are Timken factories in England and France.

THE TIMKEN ROLLER BEARING CO., CANTON, OHIO

Kissel Adds Light Straight Eight to Line

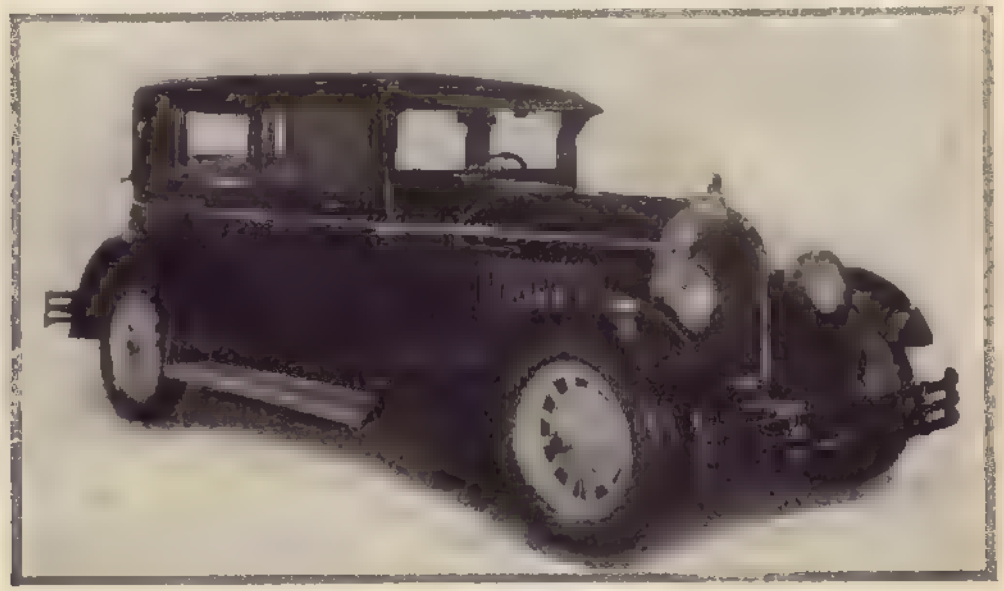
Eleven Body Models, Listing from $1895 to $2095 Complete Line

FALLING in a price class midway between its six-cylinder "55" and eight-cylinder "75" models, Kissel's new "Popular Straight Eight" the 8-65, represents a combination of features of both these chassis. While the wheelbase is one inch longer than that of the six, being 125 in., the chassis units are for the most part interchangeable with that model. The engine is a smaller edition of the model 75 powerplant, while the body models are now for the most part interchangeable with slight modifications on all three chassis.

With a bore and stroke of 2⅞ x 4¾, the engine of the new eight develops a maximum of 65 hp., the piston displacement is 247 cu. in., and the rated horsepower 26.4. As on the larger eight, Lynite split skirt three-ring pistons are used, the lower ring being of the oil control type. Connecting rods are also of Lynite, with a 2¼ in. diameter crankpin bearing. Piston pins are ⅞ in. and the 2⅛-in. crankshaft has five main bearings, with a Lanchester vibration damper fitted at the front end. The 1½-in. valves are of silicon chrome steel, the arrangement being of the L head type. The camshaft is driven by a Link-Belt chain, while a special link chain of composition material is utilized to drive the generator. As on the other Kissel models the engine is cushioned in rubber.

Transmission, clutch, universals and axles are identical with those used on the six-cylinder chassis except that the gear ratio on the new eight is 4.9 to one. Electrical units are Delco-Remy with semi-automatic spark control. Tires are 32 x 6.00 balloons mounted on 20-in. artillery wheels.

A complete tabulated list of body models and prices for 1927, which includes the elimination of a considerable number of bodies from the former line, is given on page 69 in this issue.

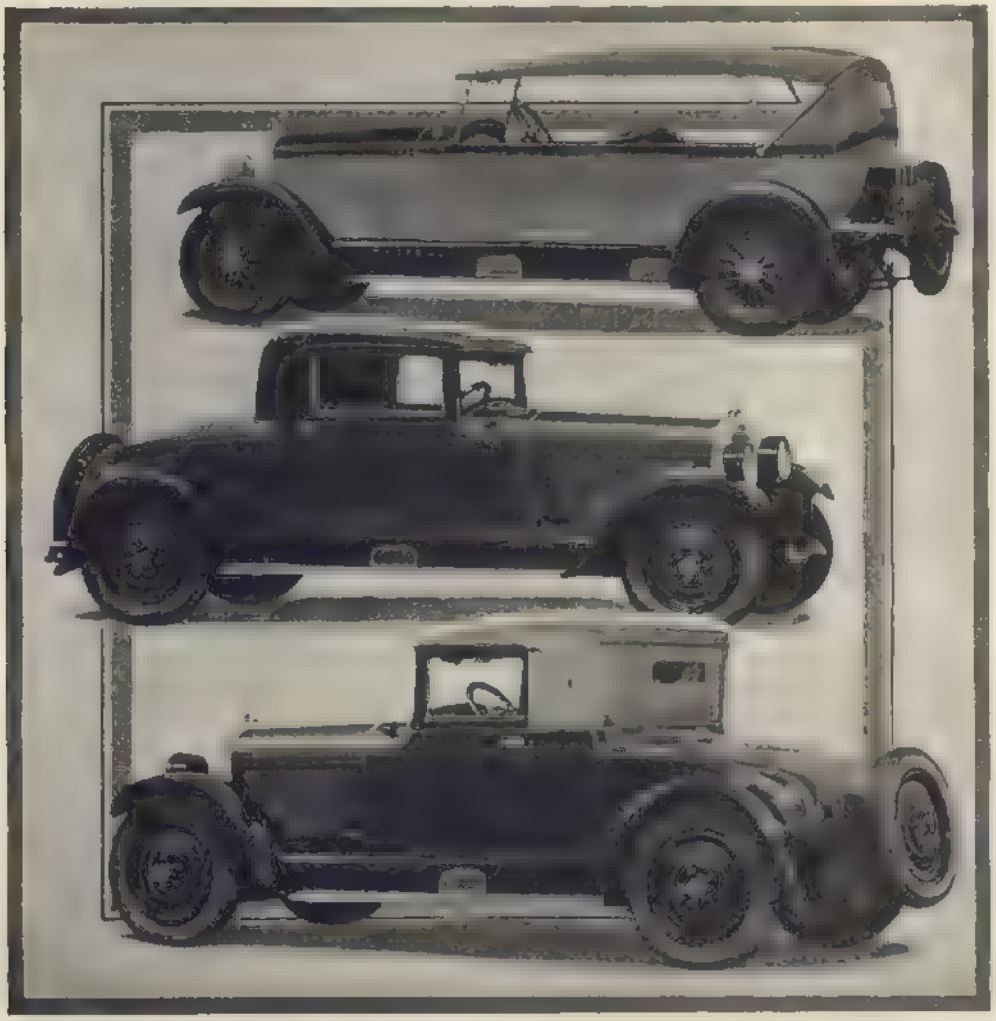


One of the closed models of the new Kissel Popular 8 line

Nash Adds Three New Body Models to Its Line

THREE new body models, including a Cabriolet on the Special Six chassis and a Coupe and a Sport Touring on the Advanced Six chassis, are announced by the Nash Motors Company.

The Special Six Cabriolet, priced at $1290 f.o.b. factory is a four-passenger convertible type of coupe. The folding top, of light colored material, may be quickly lowered and raised and is fitted with nickeled landau irons at each side. The body proper is colored a deep maroon with fenders and running gear in black. Upholstery is leather both in the driving and rumble seats. The side windows may be raised and lowered when the top is either up or down. There is a spacious compartment under the rear deck forward of the rumble seat and opening at the right side for carrying golf clubs or parcels.



At the top is the sport touring, in center is the coupe, both on the Nash Advanced Six chassis, and below the Special Six cabriolet

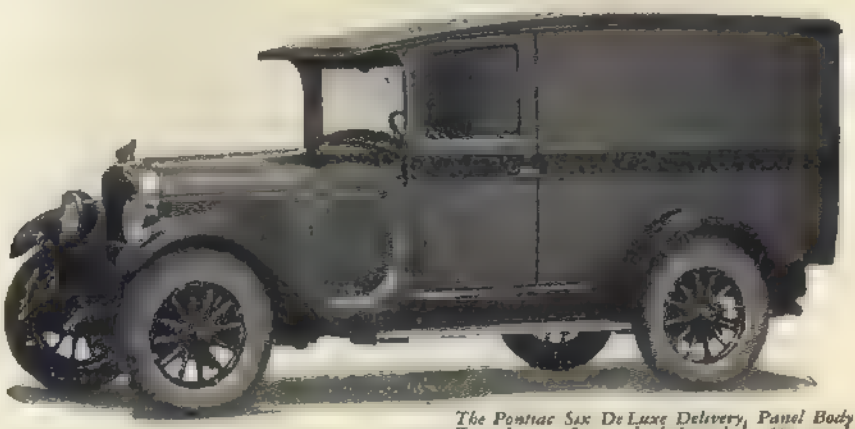
27th to 4th place

Proof of Ever Increasing Public Preference

The money-making possibilities of any automobile franchise, are in direct proportion to the responsiveness of the car-buying public. Chrysler's overwhelming sweep from 27th to 4th place in three years' time, is amazing proof of such ever-increasing preference.

CHRYSLER

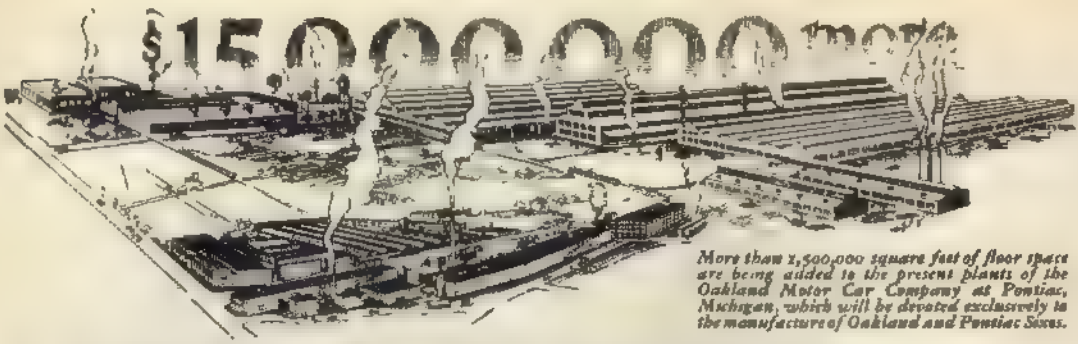
Now—another source of profit is open to *Oakland-Pontiac Dealers*



The Pontiac Six De Luxe Delivery, Panel Body Type, $770 at factory, body included. Also available in screen type, $760 at factory, body included.

INTRODUCTION of the Pontiac Six De Luxe Delivery has opened a new field for sales to the man who holds the Oakland-Pontiac Double-Profit Franchise . . . In the enthusiastic reception accorded the De Luxe Delivery, the Oakland Motor Car Company found conclusive proof that the business world has long needed and wanted dependable six-cylinder transportation at low cost. A wide variety of trade immediately accepted the Panel Body Type for their delivery service and the success of the Pontiac Six for commercial purposes was at once established. Then Oakland added the Screen Body Type, further broadening the market for its dealers . . . Both types are "keyed to traffic" by the famous Pontiac Six engine. They originate a new order of commercial car appearance with their low, rakish lines and brilliant Duco finish. Low first cost, low operating cost and low maintenance cost effect savings which good business demands. And because of these unique and exclusive qualities, the De Luxe Delivery opens a new and fertile sales field to holders of the Oakland-Pontiac Double-Profit Franchise . . . This is one more example of what Oakland does for the man who holds the Double-Profit Franchise — one more source of profit under the Oakland selling agreement. Complete plans for retail sales and aggresive national, vocational and direct-mail advertising campaigns aid Oakland dealers to make the most of this opportunity . . . Just as Oakland achieved leadership in the field of popular-priced six-cylinder passenger cars, so it is headed for a topmost position with the Pontiac Six De Luxe Delivery . . . If you are interested in this and other advantages of the Double-Profit Franchise, write for full information. Priority of application counts, so write Department B today!

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICHIGAN



More than 1,500,000 square feet of floor space are being added to the present plants of the Oakland Motor Car Company at Pontiac, Michigan, which will be devoted exclusively to the manufacture of Oakland and Pontiac Sixes.

$15,000,000 more

to meet the demand for Oakland and Pontiac Sixes

SCARCELY twelve months ago Oakland was only one of many manufacturers striving for preeminence. Today it ranks among the largest builders of motor cars in the world. Responsible for this tremendous success have been a continuous series of triumphs in advanced engineering and a succession of spectacular manufacturing feats.

With the advent of the past year, came the introduction of the Pontiac Six. Wherever shown, it kindled wildfire enthusiasm. So great was the demand it created, that in six months PontiacSix production had exceeded the greatest full year record previously scored by a new make of car. And by the end of the year that record had been surpassed by more than 100%! In July came the Greater Oakland Six with 77 refinements, featured by that epochal engineering development—the Rubber-Silenced Chassis. Again America paid a wholehearted tribute to Oakland engineering vision. And again, in every section of the land, Oakland sales leaped upward.

Now, with its position securely established, Oakland-Pontiac bids for new and greater heights—

—for over fifteen millions of dollars are being invested to provide for greater production.

To dealers who are seeking a franchise that carries a more definite promise of success, this tremendous plant expansion should be the cause of immediate action. For, reduced to its simplest terms, the investment of this staggering sum not only indicates General Motors' faith in these two quality Sixes and in Oakland principles of production and distribution—

—but it stands as a $15,000,000 guarantee that Oakland-Pontiac dealers can be assured of cars to meet their retail requirements.

You know from your experience as a dealer, that a franchise—regardless of its discounts or territory—is worthless unless you can get cars to deliver during the heavy selling season.

For the past eighteen months now Oakland popularity has been swiftly sweeping higher. And the advent of the Pontiac Six a year ago shot Oakland-Pontiac production figures to record-breaking heights.

New dealers by the hundreds came beneath the Oakland banner. In all sections of the land, they began challenging the leaders for local sales supremacy. Production increased—500—600—700—800 cars a day. But that was not enough.

Now these new plants and equipment—the finest in the industry—definitely assure a capacity of 1600 cars a day, without overtime and without sacrificing the present painstaking, scrupulously inspected methods of manufacture.

This definite assurance of deliveries is only one of the many attractive features of the Oakland-Pontiac Double-Profit Franchise. Write Department B and get all the facts from the field representative who is now in your territory.

Paige Straightaway Eight Has Four Speeds

INTRODUCTION of an eight-cylinder Paige to be known as the model 8-85 or "The Straightaway Eight," and offered in six body types, is the outstanding feature of the Paige-Detroit Motor Car Co.'s offering at the New York Automobile Show. Coincident with the announcement it is stated that all cars built by the above company will hereafter be known as the Paige. Besides the new line the company is also presenting two new bodies on the lighter chassis formerly known as the Jewett. In addition to the eight, Paige will continue its three series of sixes, the 6-75 the 6-55, and the former 6-45's, giving the company a total of 20 models in its complete line.

Prices of the Paige 8-85 are:

Touring, 7-passenger	$2315
Sedan, 5-passenger	2355
Sedan, 7-passenger	2635
Cabriolet roadster, 4-passenger	2655
Coupe, 4-passenger	2655
Limousine, 7-passenger	2905

In general appearance the Paige eight resembles the 6-75's, but is mechanically distinctive in that it is equipped with a four-speed transmission of Warner make. Fourth is direct, but extreme quietness is secured in third by use of an internal external gear construction. Bodies are designed and finished along the same lines as are offered on the big sixes and are characterized by de luxe appointments. The car has a wheelbase of 131½ inches and is powered by a Lycoming eight-cylinder vertical "L" head engine, bore 3¼, stroke 4½, piston displacement 298 6 cu. in., with an N. A. C. C. rating of 33.8 hp. and maximum hp. of 80 at 3000 r.p.m. Heavy rubber cushions are utilized in the engine supports which contact with the frame at four points. The crankshaft which is of the five-bearing type, is equipped with integral counterbalances. A Lanchester vibration damper is also used.

Pistons are of light alloy, with slotted skirt and invar struts to compensate for expansion. Two compression rings and two oil rings are used, all above the wrist pin.

The clutch is a Long Model 10-A dry plate type. Universals are of the all-metal design and the conventional Hotchkiss drive is used. The car is equipped with Salisbury axles, front and rear, with a final ratio of 4.818. Paige-Lockheed hydraulic four-wheel brakes are standard equipment. Emergency brake is on the driveshaft. The artillery wheels carry 32 x 6 tires. Steering gear is of the worm and sector design with ratio of 18 to 1.

Standard equipment for all models includes cowl ventilator, automatic windshield cleaner, dash gasoline gage, combination

Top—One of the sedan models on the new Paige Straightaway Eight. Lower—The new 6-45 cabriolet roadster with rumble seat

stop and tail light, cowl lights, electric clock, coincidental steering and ignition lock, snubbers, and rear view mirror.

Closed car equipment includes rotary window lifts, remote control door handles, arm rests and door pockets.

Interior trim is in walnut finish, including instrument board, garnish moldings and door panels.

In the Paige 6-45, formerly Jewett, a coupe listing at $1165, and a cabriolet listing at $1360 will be the company's other new show offerings.

The coupe may be obtained with either brougham cloth or machine-buffed genuine leather upholstery.

Other features are the walnut steering wheel with light controls at the hub, dash gasoline gage, automatic windshield wiper, rear view mirror, combination stop and tail light, conical headlights, cowl lights and snubbers. Wood wheels are standard and steel wheels can be had for $15 additional.

In design, the 6-45 cabriolet roadster resembles the bigger Paige model. The rear deck conceals a rumble seat which may be opened from inside the front compartment, giving the car a capacity for four passengers. Upholstery is optional, corduroy and genuine buffed leather being offered. Equipment includes Balcrank bumpers, steel wheels, dash gasoline gauge, automatic windshield wiper, rear view mirror, combination stop and tail light, remote control door locks and shock absorbers all around.

Improved Appearance and Detail Revisions Feature Latest Series Chevrolet

NEW body contours, which produce a lower general appearance, addition of a sport cabriolet model, an improved oil pump, and adoption of an AC oil filter and air cleaner of the same make are the outstanding revisions made on the latest series Chevrolet. The new series designated as the "Most Beautiful Chevrolet" models, have bullet type headlights, one-piece fenders of full crown type, and heavier running boards.

All bodies have improved upholstery and are in new colors with a double belt effect of the fish tail type. Windshield pillars are of the narrow type and remote controls are provided for the doors on all closed models. Contributing to the lower general appearance is a new radiator core and shell assembly the latter with rounded corners and a change in the inside contour to accommodate the larger core.

Miscellaneous revisions include a rearrangement of the instruments, adoption of a new type tire carrier which is now fastened to a steel plate anchored to the rear of the chassis frame, a new 17 in. walnut steering wheel and a new lock of the coincidental type operating on steering and ignition system.

The new sport cabriolet has a permanent top of tan whipcord with leather upholstery of the same shade. Balloon tires are now standard equipment on all models as are disk wheels, tank gasoline gage, combination stop and tail light. All closed cars are regularly equipped with an automatic windshield cleaner.

Bendix Brakes Standard on Lincoln Cars

Bendix four-wheel brakes of the internal shoe, self-energizing type have been adopted as standard equipment on all Lincoln cars. For this new feature an extra charge of $200 will be made. With the new models the hand brake actuates the external brakes previously operated by the foot pedal. New bullet-shaped nickel-plated headlights with Parabeam lenses, and a radiator ornament are standard equipment on the latest Lincolns.

Falcon Motors to Build Knight-Engined Six

Announcement has been made by John A. Nichols, president of the Falcon Motors Corp., Majestic Bldg., Detroit, that the company will product and sell a Knight-engined six. The car will be known as the Falcon-Knight and sell in the $1000 class. The car will be shown privately during the National Automobile Shows. The plant will be located at Elyria, Ohio. A full line of bodies will be offered.

ered vanity case and smoking set. A high grade heater is standard equipment on both models. In addition to the features just mentioned the Ambassador also has a steel trunk integral with the rear panel.

Such chassis refinements as rubber mountings for the engine, thermostatic motor control, oil and air filter are continued.

The lower priced companion car of these two new models is the Nash two-door sedan on the Light Six chassis, listing at $925. It seats five passengers comfortably. The front seats are of the parlor car type to facilitate easy entrance and exit. Standard equipment includes five disk wheels, oil purifier, air cleaner, double filament headlights, dash gasoline gage, windshield wiper, combination stop and tail light.

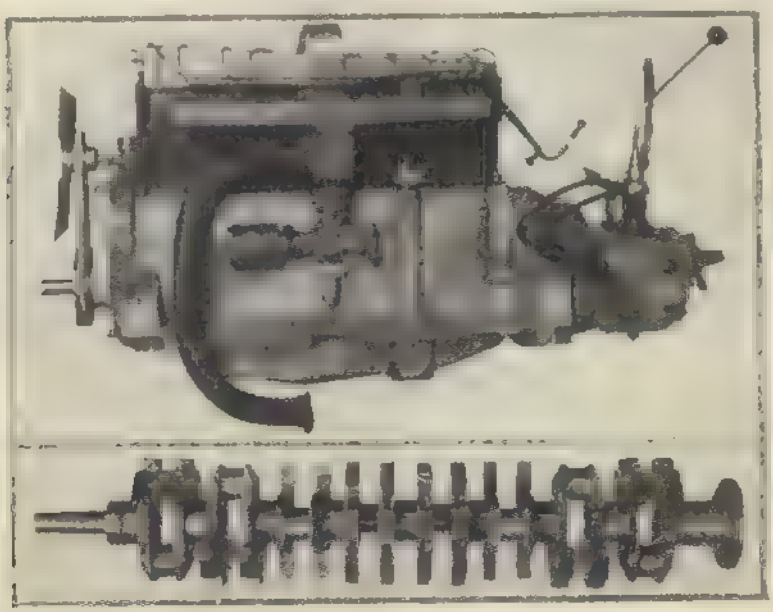
Stearns Introduces New Luxurious Eight

AN eight-in-line double sleeve valve engine, developing 102 hp., and mounted in a 137¾ in. chassis, with a complete line of bodies is announced by the F. B. Stearns Co. This, the G-8 series, is in the $4500 field and the chassis, with the exception of the powerplant and the size of the brake drums, is a duplication of the six-cylinder line recently announced

Seven body models are available: 4-passenger sport touring, roadster with rumble seat, cab-roadster with rumble seat, sedan, and 7-passenger sedan. The design of the bodies is comparable with the six-cylinder line.

Marking a new development in Knight engine design, the adoption of two eccentric shafts to operate the sleeves has made it possible to reduce the overall height of the engine. These shafts, driven by two Morse silent chains, are mounted in nine bearings on either side of the engine and operate the sleeves in the usual manner by short connecting rods.

The engine has a bore and stroke of 3½ in. by 5 in. giving a piston displacement of 384 cu. in. and a rated hp. of 39.2. The engine develops 102 b. hp. at 2600 r.p.m. and has a compression ratio of 4.85 to 1. The counterbalanced 3 in. crankshaft is mounted in 7 bronze-backed babbitt bearings with the end thrust taken by the rear bearing. Tubular steel connecting rods, with a center to center length of 12 in. have a 2¼ in. big



Powerplant of America's first luxury type Knight-engined car. An auxiliary control provides lubrication to the sleeves which are driven by two eccentric shafts. The crankshaft shown below is of 3 in. diameter counterbalanced and carried in seven bearings

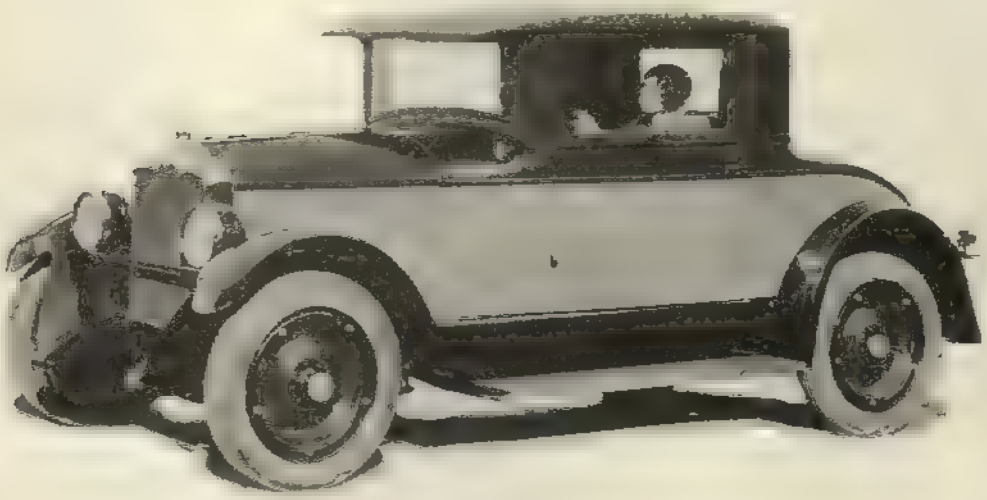
One of the sedan bodies on new Stearns-Knight straight eight chassis

end. The piston pin is locked in the upper end of the rod and the piston is fitted with four ⅛ in. compression rings all above the pin.

The cast iron cylinders form a single casting and with the detachable head are bolted to an aluminum crankcase. The exhaust leading from individual ports into the manifold is led over the center top of the engine where it is circulated through the intake hot spot chamber and from there passes down the front of the engine and on to the muffler. The intake manifold is of the Swan type and the carburetor is a Tillotson with an AC air cleaner.

Special provision is made for lubricating the sleeve valves when running at speed or under heavy load. Oil is taken from the main oil line and after passing through a control device interconnected with the foot throttle passes to the sleeves.

All electrical units are of DeJon make. The starter and generator being mounted on the right side of the engine with the distributor on the other. The latter is driven off the left eccentric shaft. At the rear the engine is secured to the frame through Belflex rubber pads and at the front end, coil springs are used in conjunction with Belflex pads.



Moon Adds Three Bodies to 6-60 Line

Moon has added a "Royal" four-door sedan, a two-door brougham and a cabriolet roadster to its 6-60 line of cars. The sedan lists at $1295 while the other two are priced at $1195. The cabriolet which is illustrated is upholstered in gray leather and is available in a number of color combinations. This model is provided with a one-piece swinging type windshield operated mechanically by means of a crank in the center of the cowl bar and a regulator for opening and closing the rear window. The four-door job has silk curtains, silk assist cord and robe rail to match upholstery and instrument board, cowl rail, and interior moldings finished in walnut. The rear of the brougham is fitted with an aluminum trimmed, black japan trunk finished in Duco to match the body color

They expected to sell 20 cars

Last year they delivered 186

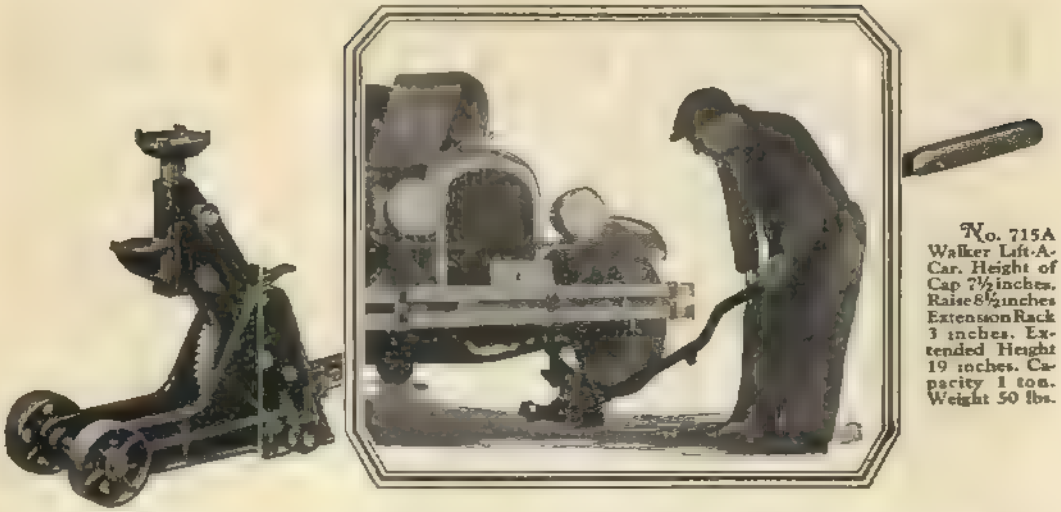
WHEN F. C. Tiedt and Fred Hahn of Western Springs, Illinois, started in 1921 to count up how many Studebakers they thought they could sell in this thriving little community of 3000 inhabitants, they thought 20 would be a peak quota.

But they actually sold 60 Studebakers that year—or at the rate of 1 for every 50 inhabitants of Western Springs.

In 1926, they sold 186 Studebakers. The first three months of this year, they delivered 42 Studebakers and Erskines. A recently opened branch at Berwyn, Ill., has also delivered a substantial number of cars. Business-building such as this is the rule, rather than the exception, in the record of Studebaker dealers all over the country.

If Studebaker is inadequately represented in your locality—or not at all—write today regarding the Studebaker-Erskine franchise. Your inquiry will be held strictly confidential. Address Department 53, The Studebaker Corporation of America, South Bend, Indiana.

STUDEBAKER



No. 715A Walker Lift-A-Car. Height of Cap 7½ inches. Raise 8½ inches Extension Rack 3 inches. Extended Height 19 inches. Capacity 1 ton. Weight 50 lbs.

"I Couldn't Afford to Be Without It"

Aligning Wheels

Adjusting Brakes

"I CAN lift a wheel quicker and easier with a Walker Lift-A-Car than with any other jack I've ever had my hands on"—this is what many a mechanic has said to us.

They don't make an axle too low or balloon tire too big for this jack. It saves time and money in adjusting brakes, putting on chains, changing tires, aligning wheels, and numerous other every-day jobs.

Lift-A-Car is a modern jack engineered and built to handle the new, low swung cars with balloon tires. If necessary the foot-lift will grab an axle 3½ inches from the ground. The high lifting point is 16 inches and with the cap extended it goes up to 19 inches. The 48-inch handle clears all interferences and makes the lift easy.

When you wheel out a sturdy Lift-A-Car you give the impression of modern efficiency that tells your customer he has come to the right place. Ask your jobber's salesman to bring a sample with him on his next trip. Handle it yourself and you'll find you can't afford to be without it.

"Dependable in Service"

Is your car
"A year and a half behind"?

by

F. E. Moskovics
President

STUTZ MOTOR CAR COMPANY
OF AMERICA, Inc.
INDIANAPOLIS

DURING the New York Show it quickly became apparent that the keynote of up-to-date engineering is *lower center of mass*—yet only two automobile manufacturers showed the courage of their convictions, and followed the lead of the Safety Stutz in adopting the worm-drive—although that is the only way in which a real lowering of the center of mass can be accomplished.

Other methods are half-way measures—cheaper but ineffectual. This is because the problem is reduced to lowering the propellor shaft five inches, and that is achieved only by a worm-drive, such as used in the Safety Stutz.

Another point: You notice the word, "Safety", now being used in connection with various cars, but did you ever find it so applied before we brought out the New Safety Stutz?

And did you observe the copies of Stutz horizontal louvers in the hoods of one car and another? Still other features will surely be copied—but, in the words of Kipling:

"They copied all they could follow,
But they couldn't copy my mind,
And I left 'em sweating and stealing,
A year and a half behind."

For the same reason these manufacturers spend their money to copy Stutz—to keep their stocks from being obsolete—the motor car merchant should guard against selling his prospects ancient models.

And that is one reason why dealers selling the Safety Stutz are uniformly successful. Write me and I'll tell you if you can make money selling the Stutz in your territory.

(Signed) F. E. Moskovics

STUTZ

The American Air-O-Stat (AUTOMATIC) enables you to make money through giving away a commodity that every motorist must have—AIR!

The American Air-O-Stat, latest and best of all air-measuring devices, is already popular everywhere, because it pays for itself quickly and shows a profit for the users.

American AIR-O-STAT
Accurate Air—Brings Customers There

Here's the idea! Mr. Motorist wants accurate air. The station that gives it to him wins his good-will and his GASOLINE, OIL and other patronage.

Here's the way this POSITIVE ACTION Air Stand operates:

Set dial to amount of air pressure desired
Put chuck on tire.
The air flows—and a bell rings continuously while the tire is inflating.
When the correct pressure is reached—click, the air stops, the bell stops ringing and—that's all.
Simple of construction, simple and "fool-proof" in operation.
Maximum service, minimum care. A REAL investment that pays you big dividends.

Put it in the Bank

the Profit from Extra Sales

of Gas and Oil that comes to You from this

Free Air Service

Follow the Path to Profit

The American Air-O-Stat (Automatic) brings a neat daily profit from a FREE service. Here's a machine that gives Mr. Motorist the exact amount of air he wants, and does it in a jiffy. Will he appreciate it? You bet. No bother to him with this ship-shape equipment.

He just sets the dial of the positive action

American AIR-O-STAT

Accurate Air—Brings Customers There

to the amount of air he wants and puts chuck on tire.

Then while the bell rings, indicating that the tire is inflating, he has time to think what else he needs . . . gas and oil nine times out of ten. Bell stops ringing when the air stops flowing. Job's done automatically, accurately, without fuss. He's ready for gas and oil, and YOU have one more sale that another station would have gotten.

Positive Action

Here's an air stand you can depend on—it's automatic! Won't vary more than one pound from its setting. Its action is positive and faultless. And, it's *easy* to operate.

The *American Automatic* AIR STAND

Now you can have an air stand which is absolutely *automatic* and *positive* in measuring the inflation of tires.

Set the American Automatic Air Stand for the pressure desired and it *faithfully delivers* that amount, to within a one pound variation, into the tire!

Think what this means to your customer and you. Remember that the air stand is the one piece of equipment in your station that the motorist usually *handles himself*—and, a *dependable, automatic* air stand reflects credit on your station and service. Further, no more will you *lose gauges*—nor time and attention in *giving* them out and *getting* them back.

The American Automatic Air Stand operates on a *diaphragm-switch* principle — not by pressure regulating valve or electrical mechanism. Has no complicated construction — it is easy to operate. It has been "station-tested" and proven worthy.

While air is flowing into tire *the bell rings*—it *stops ringing* when pressure is reached and the air is *instantly* and *positively* shut off, even though the chuck is held on the tire.

Two styles—air only or air and water. Serves complete 32 foot circle. Oil check operating on kerosene works perfectly in freezing weather. Ballbearings protected from elements. Clearance of 8 ft. under lowered arm. Hose and arm reinforced at critical points. Stand finished in Orange Duco.

If "free air" is used to attract customers, then the *safest, most convenient* air service will attract the *most* customers. The Curtis Tower Type Air Stand makes Free Air an investment in goodwill.

A slight pull on the hose brings the arm into position to reach all tires. When released, the arm automatically "hangs up the hose". An oil check keeps the hose from whipping about.

The hose is kept up out of road-tar and oil. It cannot kink on the ground to be run over and cut with gravel. Your hose expense is kept at a minimum.

You will not have to be continually repairing the Curtis Stand. In it is incorporated the same simplicity of design and construction that has been so marked in all Curtis products.

ATWATER KENT RADIO

PEOPLE used to think that any radio set that would make a noise was wonderful. They know better now.

And the more they know, the stronger is Atwater Kent Radio's position with the public and the trade.

Every one of the more than a million owners is a walking advertisement of satisfaction. That's NOW.

Whenever any large group of people are asked what radio they expect to buy—or buy next—more people say "Atwater Kent" than any other. That's the FUTURE.

The Atwater Kent Manufacturing Company will continue to offer its dealers and the public a product that sells easily and stays sold.

And, of course, its advertising (radio's greatest campaign) will continue through the spring and summer as it has done for the past two years.

MODEL 35, illustrated, 6-tube ONE DIAL Receiver, less tubes and batteries, $70. Speaker, Model H, $21.

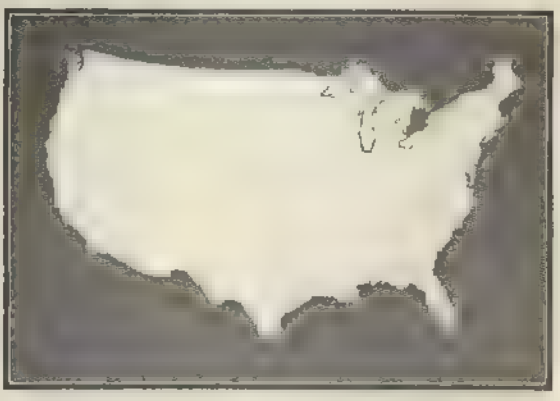
ATWATER KENT RADIO



It isn't even sprinkled

WHO CAN TALK of a saturated market when—

63 per cent of homes have automobiles
42 per cent have phonographs
65 per cent have telephones
55 per cent have electricity
22 per cent have radio

Only 22 per cent have what *everybody* wants—radio! And a very large number of the sets now in use are relics of the past—home-made or otherwise obsolete—and will have to be replaced.

The market saturated? It isn't even sprinkled!

We doubled our sales in 1925. Thanks to the enthusiastic cooperation of our dealers and the advent of the Atwater Kent ONE Dial Receiver, we doubled them *again* in 1926.

For 1927—who in your town have Radio and who haven't? And who among the present owners are ready for better sets—the irresistible Atwater Kent ONE Dial Receivers which no one can try without wanting?

AUBURN

TOMORROW YOU'LL WISH YOU HAD THE AUBURN FRANCHISE

Last year, the most competitive in the history of the industry,
-Auburn doubled its production,
-and doubled its sales volume,
-and increased the number of cars per dealer,
-and increased profits for dealers.
Auburn, the fastest growing automobile company, has a running start ahead of the others for 1927.
Volume is up - prices down -
Now is the time to become an Auburn Dealer.

E. L. Ford

AUBURN

Now is the real selling season for light socket radio power devices

Keep your radio department operating at a profit by pushing Balkite —the standard line in this field

Your greatest problem during the coming months is to keep your radio department operating at a profit. It can be done. It's entirely a question of choosing the right lines to push, of concentrating on those which can be sold in volume.

Balkite is one of those lines. During the 1925-26 season the sales of Balkite Radio Power Units were 15% greater after than before January 1st. With Balkite the selling season is 60 to 90 days later than that of most radio lines.

This is logical. Every sale of a radio set creates a Balkite prospect. In a few cases the Balkite sale is made at the time the set is sold, but usually it follows a month or two later. That is why Balkite sales continue to mount months after the peak in set sales is passed.

True as this has been in past years, it will be even more true this year, for this is the greatest of all seasons for light socket radio power devices. Never has public interest in this type of equipment been so great; never have sales been so large. And as usual Balkite is the leader in this field.

Take advantage of this situation for your profit. Feature Balkite, which you know will sell, for the coming months. Prolong your selling season 60 to 90 days, and keep your radio department operating at a profit.

FANSTEEL PRODUCTS COMPANY, Inc.
North Chicago, Illinois

FANSTEEL
Balkite
Radio Power Units

The New Balkite Charger

MODEL J. Has two charging rates: A low trickle charge rate and a high rate for rapid charging and heavy duty use. Can thus be used either as a trickle or as a high rate charger and combines their advantages. Noiseless. Large water capacity. Visible electrolyte level. Rates: with 6-volt battery, 2.5 and .5 amperes; with 4-volt battery, .8 and .2 ampere. Special model for 25-40 cycles with 1.5 amperes high rate. Price $19.50. West of Rockies $20. (In Canada $27.50.)

Balkite Trickle Charger

MODEL K. With 6-volt "A" batteries can be left on continuous or trickle charge thus automatically keeping the battery at full power. Converts the "A" battery into a light socket "A" power supply. With 4-volt batteries can be used as an intermittent charger. Or as a trickle charger if a resistance is added. Charging rate about .5 ampere. Over 300,000 in use. Price $10. West of Rockies $10.50. (In Canada $15.)

All Balkite Radio Power Units operate from 110-120 volt AC current with models for both 60 and 50 cycles. Also a 25-40 cycle model for the Balkite Charger.

Three New Balkite "B"s

Balkite "B" eliminates "B" batteries and supplies "B" current from the light socket. Noiseless. Permanent. Employs no tubes and requires no replacements. Three new models. The new popular priced Balkite "B"-W at $27.50 for sets of 5 tubes or less requiring 67 to 90 volts. Balkite "B"-X (illustrated), for sets of 8 tubes or less; capacity 30 milliamperes at 135 volts—$42. Balkite "B"-Y, for any radio set: capacity 40 milliamperes at 150 volts—$69. (In Canada "B"-W $39; "B"-X $59.50 "B"-Y $96.)

Balkite Combination

When connected to the "A" battery this new Balkite Combination Radio Unit supplies automatic power to both "A" and "B" circuits. Controlled by the filament switch on your set. Entirely automatic in operation. Can be put either near the set or in a remote location. Will serve any set now using either 4 or 6-volt "A" batteries and requiring not more than 30 milliamperes at 135 volts of "B" current—practically all sets of up to 8 tubes. Price $59.50. (In Canada $83.)

THE BALKITE LINE OF ELECTROLYTIC DEVICES IS PROTECTED BY EDGAR W. ENGLE U. S. REISSUE PATENT [illegible] 8,436 DATED OCT. 12, 1926

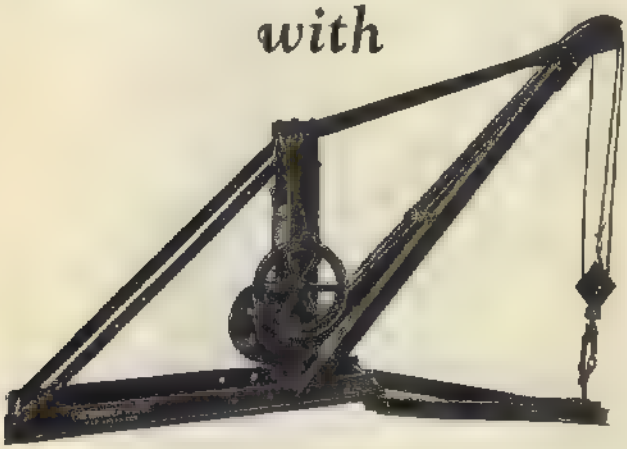
with



BENDER ELECTRIC CRANES

2½ and 4 Ton Capacities

Going out after business and dragging it back to your shop with a BENDER Electric Crane on your service car, pays.

With the BENDER one man can handle any kind of service job, and regardless of requirements, your BENDER will control the situation.

Electrically operated from the storage battery. Priced at $130 and $175—and capable of paying it back in the first half dozen jobs.
WRITE

The MASTER Brake Tester Pays Shop Profits

Provides—at a moderate cost—a method of testing brakes and equalizing them to every owner's satisfaction. It saves approximately 60% of the time required for this necessary service in your shop—and pays for itself accordingly.

Brakes set by the MASTER method of weighing the frictional resistance, give safety and positive assurance of a job well done. They increase brake band and tire life.

Equal frictional resistance means efficient brakes, with resultant protection against side-slip, skidding and unequal wear on brake linings.

The price is only $12.50

Bender Electric Cranes

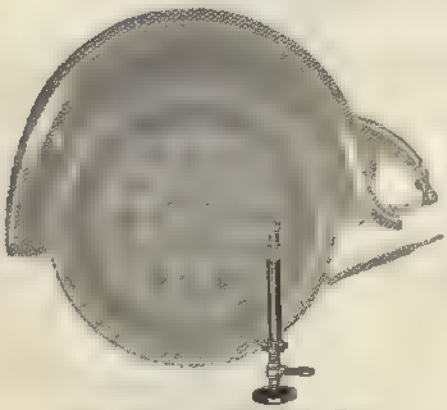
With a Bender Electric Crane one man — not a crew — brings back the wreck and the repair job. It's a big labor saver, a big money maker, *and a big business getter.*

You mount or dismount the 2-ton Bender Electric Crane in 5 minutes—a big advantage to the small garage that doesn't want to tie up a truck for wrecking exclusively.

The Bender 4-ton Heavy Duty Electric Crane is permanently mounted on your service truck. Both cranes with the exception of the cable drums are of all steel construction, and hook up to regulation 6-volt batteries. Big gear reduction makes drain on battery very slight. Write today for important detailed information.

Bender 4-Ton Heavy Duty Electric Crane handling 9000 lb. truck. The one-man wrecking crane that does the work of equipment 3 or 4 times its price

ONE MAN EQUIPMENT THAT MULTIPLIES PROFITS



The Master One Man Brake Tester

Master Brake Tester

With the Master Brake Tester *one* man —not two—adjusts the brakes. This highly developed machine accurately measures the brake power on each wheel, revealing any inequalities which demand brake adjustment or even repair or replacement. A big time and labor saver that wins the confidence of the customer and often proves beyond a question the necessity for new brake linings or brakes. Write today for important detailed information.

ONE MAN EQUIPMENT THAT MULTIPLIES PROFITS

BENDER
Electric Cranes

Bring Back the Wreck Without a Crew

A Bender Electric Crane enables one man to bring back the wreck and the repair job.

The Bender 2-Ton Electric Crane is mounted or dismounted in 5 minutes—a big saving in equipment to the garage that doesn't want to tie up a truck for wrecking only.

The Bender Heavy-Duty Electric Crane—permanently mounted—handles four tons and more easily. Does the work of equipment priced three or four times higher.

Both cranes hook up to regulation 6-volt batteries. Big gear reduction makes drain on battery very slight. Switches and ball bearing motors fully enclosed and foolproof. With exception of cabledrums, both cranes are of all steel construction. Write today for important details.

Bender 4-Ton Electric Crane handling 9000-lb. truck. Load held at any point desired

Master Brake Tester Eliminates Guess Work

Accurately measures brake power on each wheel

THIS highly developed machine enables one man to measure accurately the brake power on each wheel in a fraction of the time it takes two men to make the test by guess work.

When you've shown your customers the necessity for brake repairs, new linings or even new brakes with a Master Brake Tester, you've convinced them.

It brings more people into your shop and gives you more opportunities for gas and oil sales. The Master Brake Tester is a big business getter and labor saver that you can't afford to be without. Write today for important details.

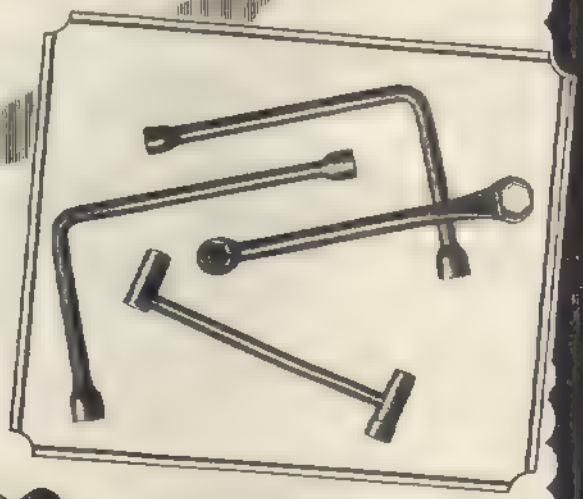
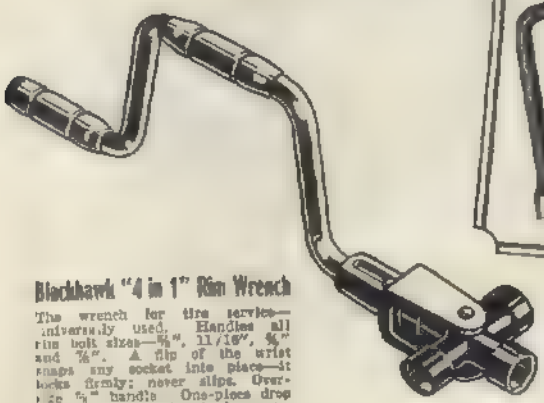
When you see a "Hex" think of Blackhawk

Sell the "Set Idea"
on One-Piece Wrenches

Ford, Chevrolet, Dodge and other owners are live prospects for an inexpensive set of Blackhawks. The first interest they show in any one tool is your cue to push the set idea. Blackhawk One-Piece Wrenches also go big with your garage trade. From your Display Boards or Cabinet you can make up sets for any car—saving time, work and money for the user—and building up volume for you.

Mechanics and motorists prefer the better looks and "feel" of Blackhawk Wrenches. Handles have just the right reach and leverage. Sockets are welded on, and exactly 1/64" oversize. The trim black finish is baked on to stay.





Blackhawk "4 in 1" Rim Wrench

The wrench for tire service—universally used. Handles all rim bolt sizes—⅝", 11/16", ¾" and ⅞". A flip of the wrist snaps any socket into place—it locks firmly; never slips. Over-size ⅝" handle. One-piece drop forged head. Liberal discounts.

List Price: $3.95

Chevrolet Set No. 30

This set of four Blackhawk One Piece Wrenches will handle most of the repair jobs on Chevrolet cars. Blackhawk quality throughout and the famous Blackhawk fit assures grease-tight nuts that will easily but never slip round off, crack or break loose from the handle. Made of special analysis, unbreakable steel.

Ask your jobber, or write us for catalog and discounts

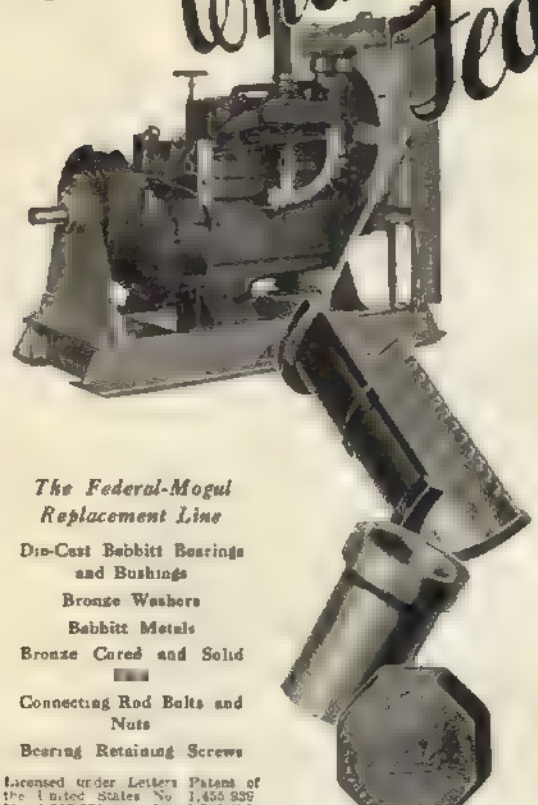
ask Waukesha what they think of Federal-Mogul



The Federal-Mogul Replacement Line

Die-Cast Babbitt Bearings and Bushings

Bronze Washers

Babbitt Metals

Bronze Cored and Solid

Connecting Rod Bolts and Nuts

Bearing Retaining Screws

Licensed under Letters Patent of the United States No. 1,455,839 No. 1,302,584. No. 1,302,838; No. 1,340,237

Waukesha engines have long been known for their mechanical excellence — for their ability to stand up under extraordinarily heavy loads.

None but the best of bearings and bushings can meet Waukesha's requirements. And that, of course, means Federal-Mogul.

Whatever difference of opinion may exist among automotive engineers in regard to other items of equipment, *all* are agreed on the quality of Federal-Mogul Bearings, Bushings and Bearing Metals. Waukesha is only one of more than 150 leading manufacturers who use them as standard equipment.

Purchase of the U. S. Bearings Company of Indianapolis, further confirms our position of dominance in the bearing field.

The Federal-Mogul replacement line is sold through 573 distributors. Use it and you can be sure of satisfactory service.

FEDERAL-MOGUL CORP.
Detroit, Michigan

Mogul FEDERAL

Some Waukesha Installations in Which Federal-Mogul Bearings Have Proven Themselves

At the spectacular Atlas fire, Milwaukee, a Federal Mogul equipped Waukesha pumper engine pumped 300,000 gallons of water in 16 hours and 30 minutes, at an average pressure of 145 pounds.

In Breckenridge, Texas, two 100 H. P. Waukesha Motors, operating on waste gas, are each heading a high pressure pump, running 24 hours a day, and having a daily capacity of 380,000 gallons of water at an average pressure of 800 pounds.

In the G. & A. R. R. Versara-Westinghouse bus, a Federal-Mogul equipped Waukesha Motor drives a 12-passenger, 30,000 pound, eight wheel bus at the rate of fifty miles an hour.

You will like Prest-O-Weld Blowpipes

YOU WILL like Prest-O-Weld welding blowpipes because they are designed for convenience as well as for efficiency and economy. They are blowpipes built for welders, by men who are themselves engineers and skilled welders.

For example, the center of balance of the Prest-O-Weld blowpipe is kept well toward the rear, which makes it easy to handle, and the handle itself is knurled to make a comfortable grip.

Prest-O-Weld apparatus belongs to the "equal pressure" type. This means that Oxygen and acetylene are supplied at approximately the same pressure. With this principle as a basis, Oxweld engineers have developed a design that insures thorough mixing of the gases and ease of control.

Prest-O-Weld is good apparatus, reasonably priced, and is sold by jobbers everywhere.

PRICES:

W-101 welding blowpipe with 5 tips and 2 sizes, $27.00

W-102 welding blowpipe with 5 tips $21.00

Prices slightly higher on Pacific Coast.

Prest-O-Weld is easy to use

YOU don't have enough welding to do to employ a full-time welder. So you want welding equipment that any good mechanic can use.

That's Prest-O-Weld.

The price is made for your purse and the equipment is made for your shop. Easy to regulate, easy to operate, sturdy, well-made (in the same factory in which the famous Oxweld injector type equipment is produced).

It means that you can do those occasional welding jobs that you always thought you'd like to do —jobs that are money makers and time savers—and still justify the expense of an outfit as sold by jobbers everywhere. You can if you buy Prest-O-Weld.

BONNEY
ONLY THE BEST
54% of these Operators use BONNEY Tappet Wrenches
We had a third party write to 1600 bus and truck operators asking them what kind of tappet wrenches they used.
Of the replies received 54% said Bonney Chrome Vanadium Tappet Wrenches. More Bonneys than all others combined—three times as many as the next most popular make.
This overwhelming preference for Bonneys tells its own story.
You can buy wrenches of many different grades and prices but Bonney stands alone. Bonney CV Chrome Vanadium Wrenches are so good that they are the least expensive in the long run.
Your jobber carries them in stock.

Recommended by all the leading car manufacturers

This Prest-O-Weld kit will make money for you

It will enable you to make all kinds of welding repairs by the oxwelding process, and it will improve your service to your customers.

This Prest-O-Weld outfit—W-102—is built especially for your shop. It contains a welding blowpipe for light and medium welding work, such as a garage or repair shop usually gets. It's the kind of tool you want to use because it is well balanced and feels right when you use it.

The outfit also contains regulators, gauges, hose and other accessories that are needed, and, in addition, a special blowpipe for removing carbon from gas engines.

Like all Prest-O-Weld apparatus, this outfit is rugged and built for service, but at the same time it is light and convenient to use.

Price of W-102 welding outfit as pictured $49.50
Prices slightly higher on Pacific Coast.

Prest-O-Weld is good equipment, reasonably priced, and is sold by jobbers everywhere.

You can cut all day with a Prest-O-Weld blowpipe

OPERATORS know the convenience of a well-balanced blowpipe, if there is much cutting to be done. The Prest-O-Weld blowpipe is light in weight and balance has been achieved by careful study of blowpipe design and of materials of construction.

But the Prest-O-Weld cutting blowpipe is also rugged, for Oxweld engineers are thoroughly familiar with the severe treatment that cutting blowpipes receive.

Another feature that makes for easy operation is the cutting valve. It is a plunger type valve, so placed that it can be operated without moving the heating flame. It does not leak and is easy to operate because it closes with the gas pressure.

Finally, Prest-O-Weld blowpipes have one piece nozzles made of copper alloy. The high heat resistance and conductivity of this material prevent the overheating and burning of the tip.

Prest-O-Weld is good apparatus, reasonably priced, and is sold by jobbers everywhere.

Price of C-101 cutting blowpipe with 4 nozzles . . $42.00
Prices slightly higher on Pacific Coast.

spring!

The season of new car owners

New drivers, and old timers as well!

SPRING—with the public on wheels—should stimulate dealers to merchandise *every* profitable and worthwhile automotive accessory.

The basis of sound merchandising—rendering a worthwhile service—is always seasonable. A Boyce Moto Meter on the radiator cap represents *more* than the sale of an automotive necessity: it reflects, alike to car owner and dealer, the appreciation of a service of protection, a contribution to motor efficiency. Further, being *directly in the line of driving vision—away from the crowded dash*—it provides relaxation and driving comfort.

Dealers know that every driver, new or old, needs the protection from motor troubles that only a genuine Boyce Moto Meter affords.

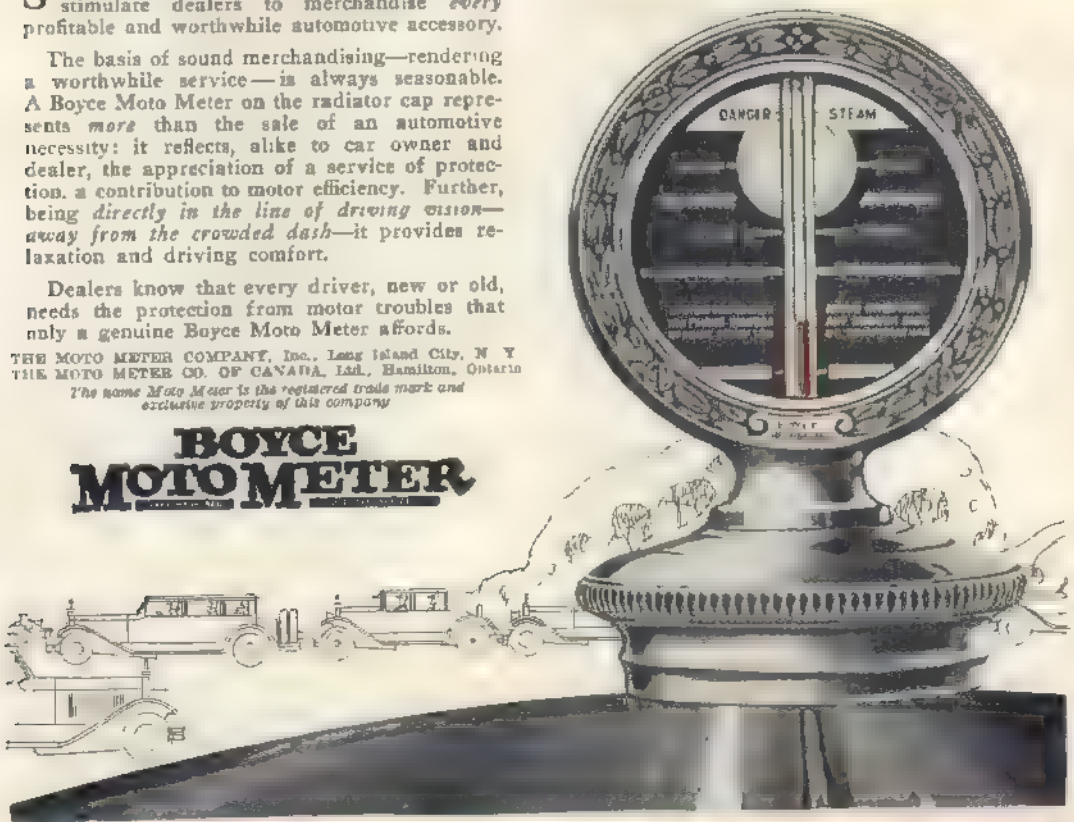
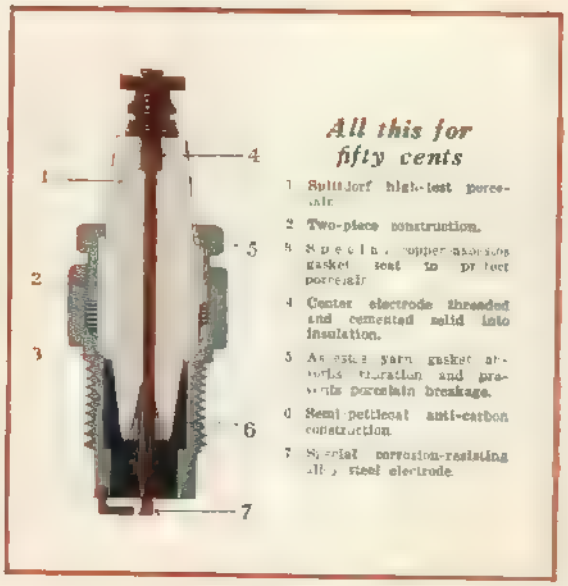
BOYCE MOTOMETER



ON THE RADIATOR CAPS OF MORE THAN 10,000,000 MOTOR CARS

When you "*tune up the engine*"

remember that Splitdorf Spark Plugs are great little engine tuners!



All this for fifty cents

1. Splitdorf high-test porcelain
2. Two-piece construction.
3. Special copper-asbestos gasket seat to protect porcelain
4. Center electrode threaded and cemented solid into insulation.
5. Asbestos yarn gasket absorbs vibration and prevents porcelain breakage.
6. Semi-petticoat anti-carbon construction.
7. Special corrosion-resisting alloy steel electrode.

ONE new plug may make one cylinder fire better, but it won't put the vim and vigor into the motor that a full set of Splitdorf Plugs do. You can't "tune up" a fiddle with one string or an engine with one plug. A motor with a collection of spark plugs—all kinds, all ages—will sound a sour note somewhere. Spark gaps vary, carbon is thicker on some plugs than on others—firing is bound to be irregular.

To get the sweet-running, pick-up-and-go performance that a motorist looks for after a tuning up, replace all his old plugs. Put in a new set of Splitdorf Spark Plugs. You can do it because Splitdorf has made a price of only fifty cents on all Splitdorf Plugs—high-grade, first-quality plugs—absolutely dependable, perfectly uniform and exceptionally durable—every one of them. There's a type for every engine. All plugs tested at the factory for mechanical and electrical perfection.

For Fords there are four Splitdorf Spark Plugs in a special carton that retails for $1.75. Here's a ready money-maker—a short cut to a big volume of Ford replacement business. Splitdorf Electrical Company, 392 High Street, Newark, N. J. *Subsidiary of Splitdorf-Bethlehem Electrical Company.*

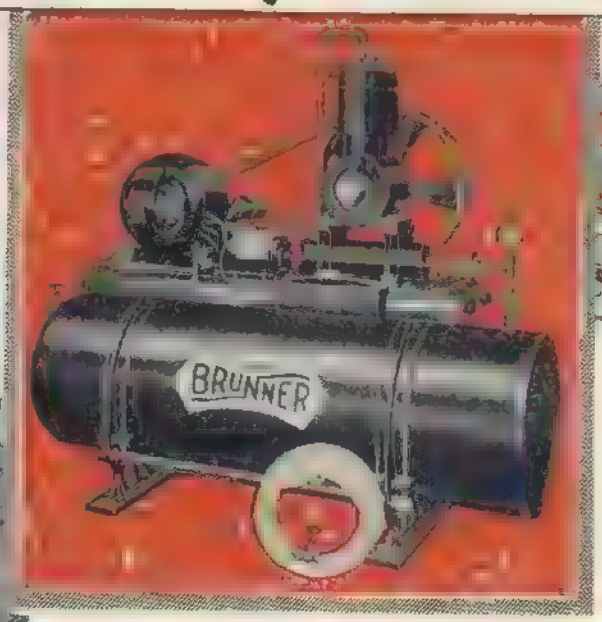
Try this on your Used Cars



Brunner Model 967

If you have a line-up of used cars that's beginning to get on your nerves, here's a profitable way to move them

Spray paint them and mark the price up $40 00 or $50.00. It's been tried and proven. If a car is priced too cheap and *looks* cheap, nobody wants it. But give it a fair price and a good appearance and it's bound to sell. Many dealers have found this not only the most effective way of unload ng used cars, but have built up a profitable paint shop business as well.

The model 967 unit will furn sh dependable air service for your paint spray guns in addition to inflat ng tires and operating valve grinders and engine cleaners.

An instructive booklet "Spray Painting the Automobile", has been prepared. It is full of profit pointers and shows complete Brunner equipment. Send for it.

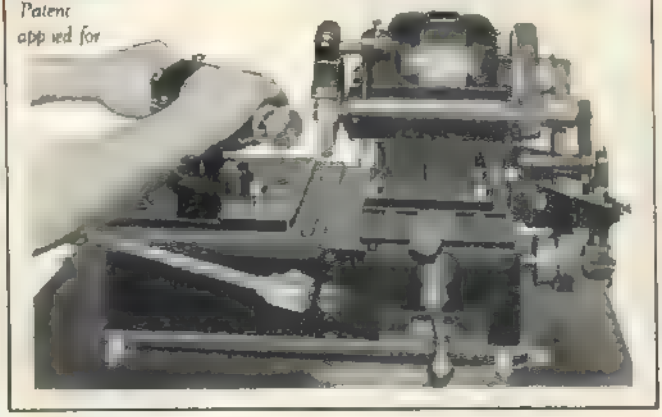
VALVE FACE GRINDING MACHINE

with the NEW Sioux Roller Chucking System

No. 650 Net price complete **$160**

Patent app'ed for



Your Jobber Sells It.

With its NEW roller chucking system—the Sioux Valve Face Grinding Machine is now more firmly established than ever as the most advanced and perfected machine of its kind—new standards of simplicity, accuracy and speed on valve work. When the chuck is tightened, the rollers, with their long firm gripping surface, automatically push the valve stem back against the aligner. This assures a perfect alignment and accurate grinding of valve face in proper relation to the valve stem guide hole in the motor. *Guaranteed accurate within .001.* The floating rollers change position on every valve chucked—assuring long life. Capacity 5-16 to 41-64 inch inclusive.

With Sioux equipment you can make valve servicing a source of big income. Its big time savings give you an extra margin on every job. You can also grind valves for other shops at a good profit. Investigate the Sioux before you buy.

New Buick Town Brougham

Illustrating the new Buick Town Brougham which is mounted on the Series 115 chassis which was formerly known as the Standard. This is a four-door de luxe model and carries the same color scheme as the de luxe two-passenger coupe on the same chassis. The upper part of the body, including the top is Delaware green, with the lower part, below the belt, in Yorktown green. The molding is black with double gold striping. Wheels are natural wood, with hubs, brake drums and felloes painted and striped to match the body. The upholstering and trim are mohair plush, colored to harmonize with the body colors. Buick is now designating its models by wheelbase lengths, the Standard being known as the Series 115, the Master as Series 120 and de luxe Master as Series 128

New Sedans on Chandler Big Six

Two new body models on the Standard chassis together with two other new body styles on the Big Six, constitute the additions to the current line for 1927 by the Chandler-Cleveland Motors Corp. The two new models on the Standard Six are a de luxe sedan and two-passenger coupe. The two new body models on the Big Six chassis, a seven-passenger sedan and five-passenger Metropolitan de luxe sedan, are illustrated above. Both of these bodies are of Budd all-steel construction, listing at $1695 and $1895 respectively. Special overstuffed mohair upholstery, side reading lights and silk rope cords are standard on both these models.

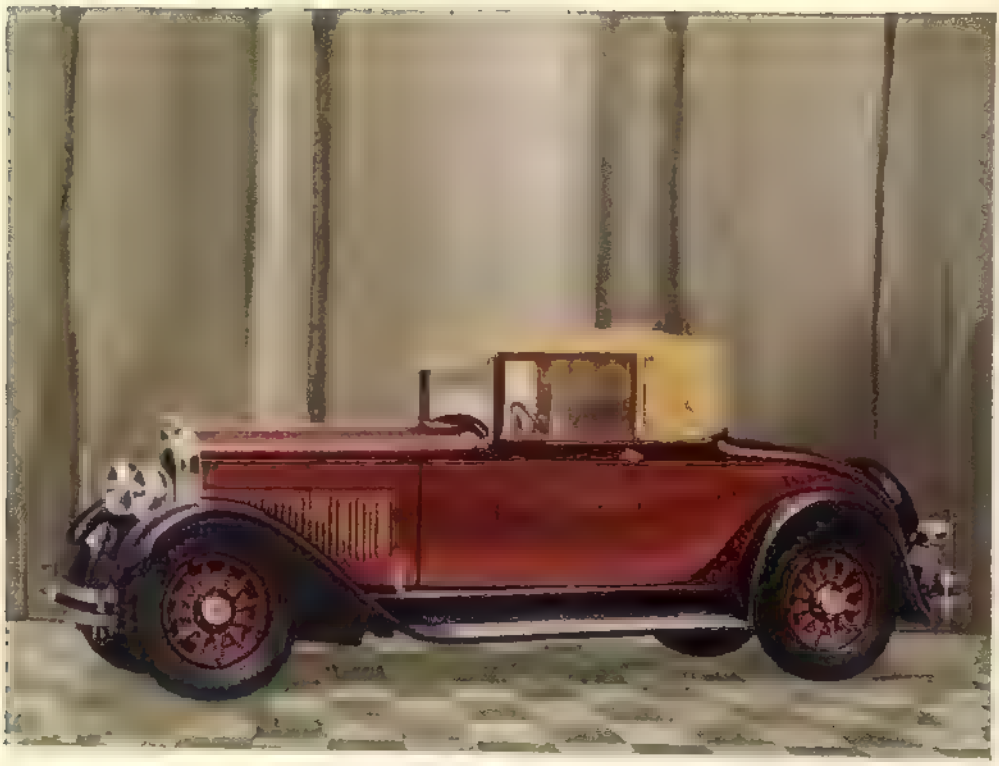
The Little Marmon Coupe



The Little Marmon Collapsible Coupe-Roadster

New Developments

The Little Marmon engine with 8 cylinders in line is approached by no other passenger car motor built today in horsepower per cubic inch displacement and range of performance. Built by Marmon in Marmon factories to highest precision standards. *The chassis* is unusually low swung but with normal road clearance, due to use of new Hypoid rear axle gears; springs are mounted in new type of rubber insulators which are rattle-proof, trouble-proof, require no lubrication and last a lifetime; 6-inch channel frame, very rigid; self-energizing four-wheel brakes; unusually long, flat, semi-elliptic springs (total length of front and rear springs lack only 22 inches of equaling the wheelbase of the car); 70 honest miles per hour with ease. 18 to 22 miles to a gallon of gasoline.

Prices and Types

The Little Marmon is being produced in six standard body styles: *Two-Door Sedan*, $1795; *Four-Door Sedan*, $1895; *Two-Passenger Speedster*, $1895; *Four-Passenger Speedster*, $1965; *Coupe*, $1895; and *Collapsible Coupe Roadster*, $1995. Prices include Lovejoy hydraulic shock absorbers, front and rear bumpers, electric clock, cigar lighter, automatic windshield wiper and other equipment naturally associated with a truly fine motor car. All prices f. o. b. factory.

It's Style they want!

and here are the Style

JEWETT FIVE PASSENGER SEDAN

Model 6-45

Leaders of the year!

PAIGE FIVE PASSENGER SEDAN
Model 6-75

...and here's a Style Story that You can Profit by!

YOU'RE about to begin another year. You're wondering what 1927 has in store for you. If you're "in the red" —or if your business has given you only a bare living—you want to see a change for the better in 1927. You want not only a bigger yield from your investment, but *more net profit per car*. That's only reasonable. You ought to have it—and you can get it!

Sign and mail the coupon below and you'll know how within a week

Just to sell more cars next year than you did in 1926 won't help much if you don't get a bigger return. What you need is a line that assures a good volume and at the same time a profit directly in proportion to that volume.

We'll prove that this is such a line—as quickly as you mail that coupon.

If you could tie up to a line that would sell and show a steady growth—if the factory helps you get out of that business every last dollar it should pay you—if the Big Boys at the factory don't tell you you've GOT to take so many cars at a time you can't possibly move them except at a loss—if they don't crowd your territory with dealers so that not one of you can make a good living—if they promptly take care of your customers' complaints—if they continually come through with cars that sell and stay sold —with a sales and service policy that is more than fair—with liberal advertising assistance—you could probably make a *lot more money* next year, couldn't you?

Better mail that coupon NOW —for we've got SOME proposition for the right dealer

You're conscious of the increasing influence of the feminine hand behind the trend of the times. As the police say in a murder mystery: "Look for the woman!" You can make considerably more money next year if you've got a line that satisfies the critical gaze of critical women. You can't fool her with superficial beauty—you can't satisfy her with a cheap car that has been "dolled up"—you have got to have real *style cars*—you've got to have genuine *smartness, undeniably good taste* real *style leaders*

The sooner you mail that coupon, the sooner you'll know to what lengths we've gone to satisfy the whimsiest of feminine whims!

But, man—we can't begin to tell you on this single page what a wonderful proposition we've got for the right kind of dealers who are looking for bigger and better business in 1927. You may be too late—but please don't *assume* that you are. The only way you can definitely find out whether your territory is open is to get in touch with this factory. It only takes a minute to fill out and mail that coupon—and in fairness to yourself, your family and your children (as, if, or when any!) you ought at least learn the complete details about our proposition before being *too sure* that you're making all the money you might make in the automobile business. Do it now—get that coupon off in tonight's mail. It may give you a brand new lease on life

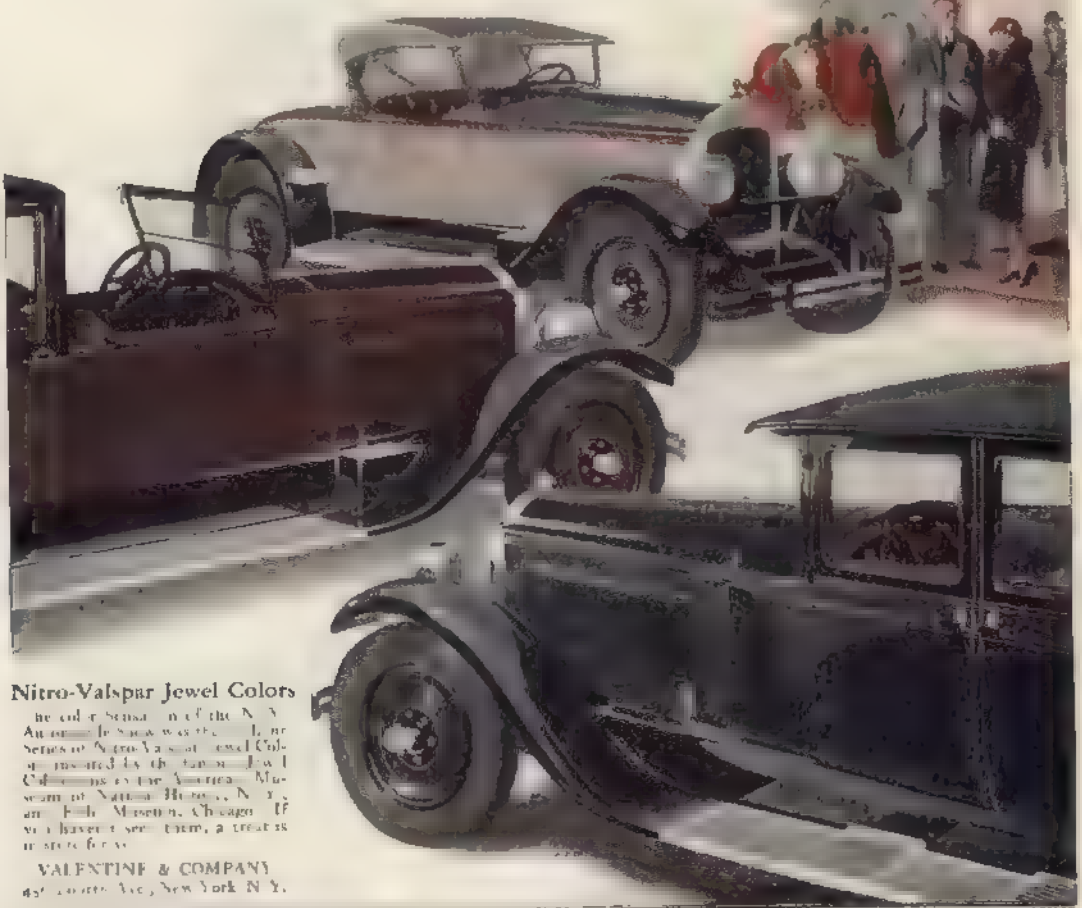
The finest PACKARDS *ever built are finished with*

NITRO-VALSPAR

A TRIUMPH in automotive engineering, body designing and color harmony—*the new Packard*. A triumph in automobile finishes—*Nitro-Valspar*. And these two great achievements are linked together for every Packard is finished with Nitro-Valspar from bare metal to final finish.

This Valspar *all-lacquer* finish actually costs you less to apply than the ordinary lacquer over *all-type* undercoats! Nitro-Valspar means less delay, less overhead, better satisfied customers.



Nitro-Valspar Jewel Colors

The color sensation of the N. Y. Automobile Show was the [illegible] Series of Nitro-Valspar Jewel Colors inspired by the famous Jewel Collections in the American Museum of Natural History, N. Y., and Field Museum, Chicago. If you haven't seen them, a treat is in store for you.

VALENTINE & COMPANY
452 Fourth Ave., New York, N. Y.

CADILLAC'S program of 50 Body Styles and Types in 500 Color and Upholstery Combinations was the first genuinely new note in motor cars in five years. It made the motor car once again a thing of personal pride and individual distinction.

But color and body variety are not the only new and finer elements in this new Cadillac. In every performance detail; in speed and power; in value and dependability it surpasses any former Cadillac.

Proof of this is found in the fact that the demand for the new 90-degree, eight-cylinder Cadillac is far greater than that of all other cars at its price, or over, put together.

All eyes are focusing on the great new

NEW 90 DEGREE

CADILLAC

DIVISION OF GENERAL MOTORS CORPORATION

CADILLAC and LaSALLE

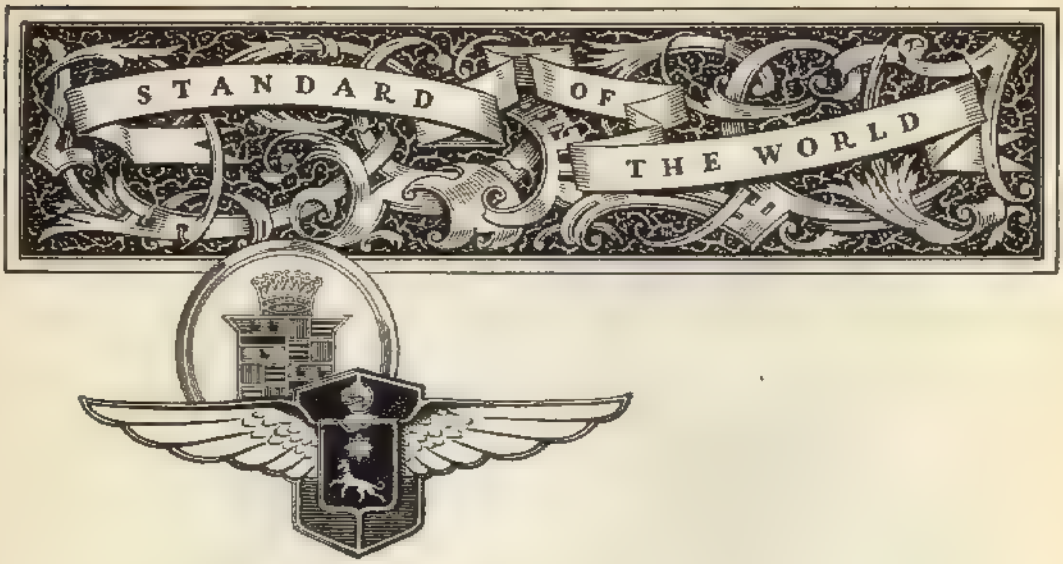
the two strongest selling fine cars

The LaSalle greatly widens the circle of prospects for a car of Cadillac calibre. It gives the Cadillac-LaSalle dealer the important advantage of selling the two most popular fine cars on the American market—and thus achieving a volume heretofore without parallel in fine car merchandising. To serve its greatly extended field, the Cadillac Motor Car Company finds it desirable conservatively to expand its dealer organization. The men whom we desire to associate with the Cadillac organization are sound, aggressive merchandisers of adequate financial standing, and of permanent ability to realize the full profit possibilities of this outstanding double franchise. Please write confidentially to your nearest Cadillac distributor or to the Sales Department at the Cadillac factory.

CADILLAC MOTOR CAR COMPANY

Detroit, Michigan *Oshawa, Canada*

Division of General Motors Corporation



Unparalleled sales volume in fine car merchandising

Never, before the advent of the LaSalle, has an automobile merchant been able to achieve anywhere near equal high volume sales in the fine car field.

The greatest value of the Cadillac-LaSalle franchise lies in the fact that these two cars are the two fastest-selling cars in the fine car field.

The LaSalle has already achieved a dominance of its particular field as overwhelming as that of Cadillac among the cars of still higher price.

The number of prospects in any given territory has been greatly increased by the LaSalle, with the result that the Cadillac Motor Car Company is now welcoming a very limited number of new dealers.

Those to be considered are sound, aggressive business men with adequate capital or bank credit, and with the stability to cultivate their territory permanently to greatest profit advantage. For further information, write your Cadillac distributor or direct to the Sales Department, Cadillac Factory.

CADILLAC MOTOR CAR COMPANY

Detroit, Michigan *Oshawa, Canada*

Division of General Motors Corporation

The Most Stable Market for Automobiles

It is one of the particular merits of handling such cars as the Cadillac and the LaSalle, that even in the poorest time their dealers never reach the lowest valleys in sales volume.

The people who buy such cars as these always have money to buy new cars when they need them. They constitute the richest, safest, most stable market.

This is always particularly the situation with Cadillac and LaSalle, because of their leadership in design, in chassis engineering and in value. Because of these attributes, and because of public confidence in the Cadillac name, they are enjoying extraordinary sales success and will continue to enjoy such success.

CADILLAC MOTOR CAR COMPANY

Detroit, Michigan *Oshawa, Canada*

Division of General Motors Corporation

HAVE you ever analyzed why it is that of all the fine cars in the world, Cadillac is almost invariably relied upon where there is real need for dependability and durability?

On the boulevards of the world—and also in the rugged and difficult places of the world—you find Cadillacs—providing in the one case the very finest of luxurious motoring and in the other an incomparable regularity of service—in each case, and in all cases in between, delivering to owners the utmost in service and in value. On that basis Cadillac reputation and standing are secure—for these reasons Cadillac is, today, outselling all cars, at or above its price, by two to one.

The great new Cadillac is outstripping its field—for the sole reason that the things it does, the way it does them, and how little it costs to do them—make it the choice of careful, critical buyers everywhere.

CARBURETER

Inspection, Inspection, Inspection

Every fourth man in the Carter plant is directly concerned in inspection. Materials, operations, parts, and assemblies are inspected, inspected, inspected. There is checking and rechecking of inspections wherever vital.

To begin with, the plain-tube principle pioneered by Carter, and developed through fifteen years, is basically suited to uniform precision production, free from difficultly controlled variables. Then too, Carter is particularly noted for strict preparation and enforcement of specifications. Finally, each carbureter is individually tested on the exact type of engine to be served, and leaves the plant with a permanent record tag, so that if any exception to the rule of precision ever occurs, it can be traced down unerringly.

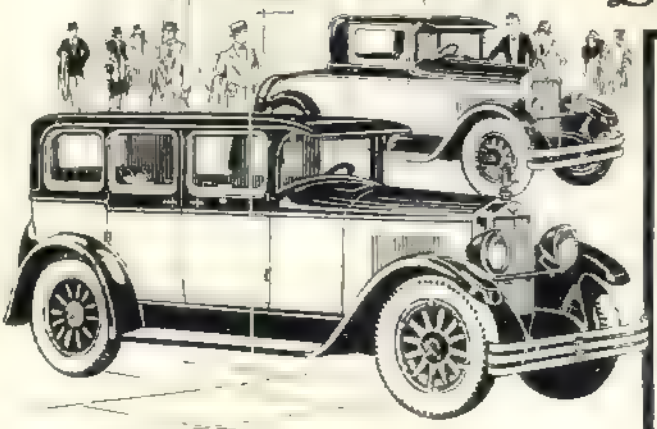
Such a product, backed by intimate field co-operation and by the resources of American Car and Foundry Company, deserves its place as standard equipment on more than a million cars a year.

CARTER CARBURETOR CORPORATION, SAINT LOUIS

Long Life

LONG VELIE LIFE

Beauty—Individuality



Features not found at its price in any other fully equipped 6-cylinder, Four-door Sedan with 56-inch tread

1. The most powerful car at the price.
2. Only valve-in-head motor in any car priced under $1200
3. Only motor with forced pressure lubrication to valve mechanism
4. The strongest construction
5. Only motor with Lanchester type vibration dampener.
6. Only radiator capacity of 4½ gals.
7. Only four-wheel Lockheed hydraulic brakes
8. Only car with heat indicator on dash.
9. Only car with 182½ inches of spring equipment.
10. Lowest cost price and weight considered. Velie Sales increasing from 47% to 101% month after month compared to 1926.

A Matchless Sales Opportunity

In the Velie Line you will find every costly car feature . . . yet small car cost. Comparison of Velie Units with competitive cars proves Velie better by a big degree . . . and reinforces the slogan "Long Life." Local newspaper advertising is on a more liberal basis than customary . . . extremely more so. The Velie organization, strongly financed and managed by its owners, will always be a dominant factor among quality car manufacturers.

A full line of automobiles on two chassis, price range $1165 to $1635. Low operating cost and freedom from dealer "service" is assured by exclusive features combined with *over-strength* construction throughout.

Dealers anxious to build upon a solid foundation for the future will find the Velie Franchise invaluable.

Velie Sales Are Increasing From 47% to 101% Month After Month, Compared With 1926

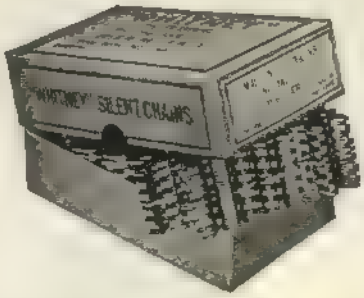
WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY

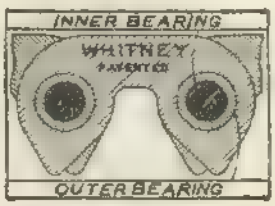
South Bend, Indiana



PREPARE NOW—

To take care of SPRING REPAIRS. No single wearing part is more vital to the smooth, sweet-running motor than the TIMING CHAIN.

NEARLY ANY NEW CHAIN will tone up the car's performance, but a really *satisfactory* job requires a chain with many thousands of miles of potential service built into it. With a bearing surface practically double that of other silent chains, the joint construction of



"WHITNEY" SILENT CHAINS

insures an installation of reliability and permanence, and the chain usually outlasts the car itself.

Ask Your Jobber or Write

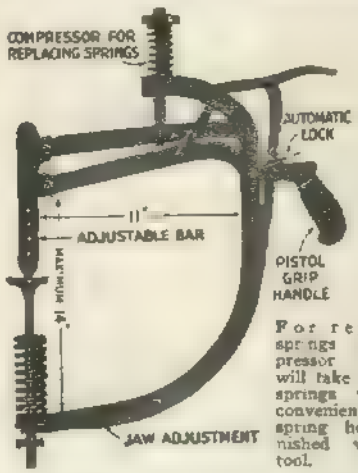
For Trucks and Busses

HEAVY DUTY **K-D** VALVE SPRING COMPRESSOR



For replacing springs the compressor attachment will take all sizes of springs which are conveniently held in spring holders furnished with each tool.

Tells Its Own Story

One glance will convince any mechanic who has wrestled with the removal of valves on a heavy motor that this new K-D Heavy Duty Compressor is the answer to his difficulty.

With its Pistol Grip Handle, its sturdy construction and apparent ease of operation, this new K-D Tool takes rank as indispensable in the tool kit. For it either removes or replaces the valve springs—quickly and easily—a wonderful saving of time, i.e., labor cost. This able-bodied K-D Compressor costs $7.50. It will pay you to own at least one.

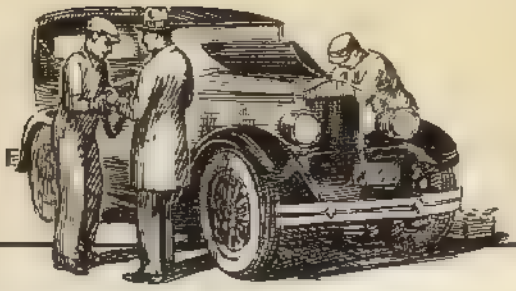
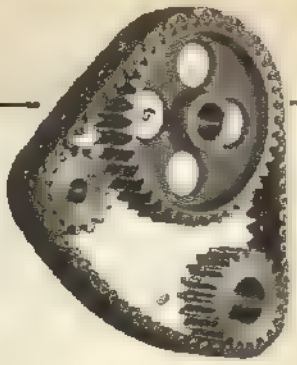
K-D HEAVY DUTY VALVE SPRING COMPRESSOR





When you're overhauling replace timing chains!

When you're cleaning carbon, grinding valves or honing cylinders ask about timing chains. Ask them if the motor's losing pep . . . lagging on hills or slow to pick up in traffic. Suggest timing chains. Show them how Duckworth Silent Timing Chains will bring back that lost pep and give them a new motor. Tell them why Duckworth Chains will last twice as long as the ordinary timing chain because of its different construction.

Send for the Duckworth Timing Chain Manual. It will give you some real, selling arguments. Write Duckworth Chain and Mfg. Co., Springfield, Mass., or F. C. West Co. in Chicago.

Now 4th of World's Great Companies

Such Sweeping Public Endorsement of Chrysler Standardized Quality Cars Makes Chrysler Franchise Most Desirable Asset

Chrysler is fourth in dollar volume of sales in the industry. Once more the general public has proven that it will always seek out the individual operator who disregards outworn principles and practices and brings them something unmistakably new, unmistakably progressive, and unmistakably superior in service.

This sweeping public endorsement of Chrysler together with the fair dealer policies of the strong Chrysler organization makes the Chrysler franchise—with its four great lines of cars ranging from $750 to $3995, to cover the four great quality car fields—one of the most desirable and eagerly sought dealer connections in the industry.

CHRYSLER

41 Cars Enter International 500-Mile Indianapolis Race

11 Front Drives and Duesenberg Specials, With Offset Engine, Feature Annual Race—Fernic of Roumania With Bugatti, Lone Foreign Entrant

FEATURED by the initial appearance of the newly designed Duesenbergs with offset engines and propeller shaft, 41 racing cars of 91½ in. displacement will compete in the Fifteenth Annual 500-Mile International Sweepstakes over the 2½-mile brick track at Indianapolis, on Memorial Day, May 30.

While it is the biggest entry list since 1919 there is but a slight taste of international flavor with only one foreign driver competing, he being George G. Fernic of Roumania, who has entered a Bugatti and will make his first appearance on an American track.

While the majority of cars will make their first appearance of the season before the crowd of probably 150,000 spectators, the racing qualities and make-up of the cars are known. There are several "dark horses" which include the four Cooper front wheel drive specials, the front wheel drive car entered by Tommy Milton and the new Duesenbergs. By offsetting the engine and propeller shaft, it permits the driver in the Duesenbergs to sit alongside of the shaft instead of over top, thus permitting him to be lower to the ground, which lends toward driver safety.

Never since the start of the series of races inaugurated by Carl Fisher, has there been a sure prediction as to the winner. Starting with engines of 600 cu. in. displacement down to the present type of 91½, speed records have been established and the mark of 101.13 miles per hour, made by Pete De Paolo in 1925, stands as a record to shoot at by the thirty-three drivers who will face the starter.

Last year was the first time for the 91½ jobs to compete at Indianapolis, and Frank Lockhart, the youth from the Coast, set the pace after a 100 miles until the race was called at 400 miles due to rain. Lockhart's

CURTIS COMPRESSORS HOISTS CRANES CAR WASH SYSTEMS PORTABLE COMPRESSOR UNITS

Special "Seasoned" Iron

Used in Curtis Compressors

Curtis makes only compressed air machinery. We operate our own foundries. Therefore, we can and do use a special grade of close-grained pig iron, especially suited for compressed air work. Where a manufacturer buys his castings from a jobbing foundry, the cost of pouring special grades of metal in small "heats" is prohibitive.

Curtis thoroughly cures every casting before assembling, and this is true for the smallest machine as well as for the largest.

This 73-year-old company will not knowingly chance a single unworthy product, harming a reputation which has taken so long to build!

CURTIS COMPRESSORS

CURTIS PNEUMATIC MACHINERY COMPANY, ST LOUIS U S A

"The Name that Stands for STANDARD"

SEASONED shop men who "know tools" pick Walden-Worcester Wrenches because of their *proven durability.*

In the sweat and grease of the service station, where tools are *used,* Walden-Worcester Wrenches last indefinitely—taking punishment that would put ordinary wrenches out of business in short order.

In factory assembly work—the supreme test of wrench stamina—they have established phenomenal records for long life.

Only a true "Quality" wrench could perform the feats of a "Walden-Worcester."

And it is through this known *quality,* based on actual performance, that Walden-Worcester Wrenches have come to be recognized everywhere as *"Standard"*—and as such, preferred by the majority of wrench users in the automotive field.

To select Walden-Worcester Wrenches is to get the utmost in wrench service and economy.

From your jobber. Write us today for Wrench Catalog 12, illustrating complete line of socket wrenches

Expert Core Makers *in Curtis Foundry*

A Curtis Product

from raw material to finished compressor

The great 17½ acre Curtis plant is full of examples of skilled work and of specialized production methods—made possible by Curtis' immense production and 73 years' manufacturing experience.

When you buy a Curtis Compressor and get years of unusually satisfactory service from it, you may not think of the expert core-making, for example, that went into it—yet this is one of the contributing factors to successful compressor building.

Selected iron for compressor castings; poured in our own foundries; especially "seasoned" before use; highly standardized parts assembled with meticulous care; each and every compressor "run in", adjusted, tested and certified, as carefully as if made to order—is it surprising that Curtis Compressors give more service with less servicing?

CURTIS PNEUMATIC MACHINERY COMPANY, ST LOUIS, U.S.A.

Signed C. W. Nash

THE NASH MOTORS COMPANY

Manufacturers of Nash Cars and Trucks

KENOSHA, WISCONSIN

January 7, 1927.

Mr. Hugh Wood,
Carter Carburetor Company,
St. Louis, Missouri.

Dear Mr. Wood:

We have now been doing business with your company for something over one and a half years, and we have had an excellent opportunity to observe the manner in which you transact your business, and especially as it refers to service; and just at this time I feel it my duty to drop you a line and tell you how much our company appreciates the service policies which you have in your company, and the work you have done in servicing your carburetor among the Nash dealers and distributors.

It seems to me that I know of no company who have had quite as great a vision as your company has had in the manner of laying a solid foundation by rendering service to their product. It is a very unusual thing for a company building an accessory part of an automobile to keep service men traveling continuously throughout the United States, conducting what I choose to call an educational campaign among the dealer body. It seems to me that in handling your business in this manner that you have been not only doing a world of good to the dealer body handling your product, but that you have also been laying an excellent foundation for the future development of your business.

I hope that you will be able to see splendid results obtained by your company through this kind of work.

Very truly yours,

C. W. Nash

President.

Chicago

December 10, 1928

Electrical Research Laboratories,
2500 Cottage Grove Ave.,
Chicago, Illinois

Gentlemen;

Today I had a genuine musical thrill--I listened to the Erla super-Six! It begins where the latest improved phonograph has left off. The Erla produces the true voice of the singer, retains the individual tone of every orchestral instrument, and the most amazing achievement of radio science--the piano tone comes in with all its ravishing beauty, singing quality--sonority and brilliance! "Erla-tone" should be added to the terminology of music's greatest names, along with Beethoven, Wagner, and Chopin.

My heartiest congratulations upon the perfection of Erla-radio's most faithful producer of music as the sincere artist breathes.

Sincerely yours,

Moissaye Boguslawski

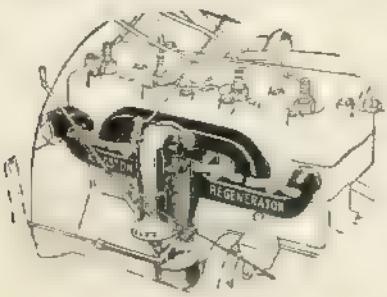
Moissaye Boguslawski's programs are enjoyed by thousands through Station KYW

ELECTRICAL RESEARCH ERLA RADIO LABORATORIES, CHICAGO

RIGHT NOW

HERE is the livest and most profitable single item in your stock—THE NEW KINGSTON MODEL B REGENERATOR. It hit the new year with a bang, and it has been going bigger every day. It brings to the Ford car and truck the successful application of the DRY GAS principle of carburetion. Double your sales this month with the NEW Kingston—tried, proved, perfected and RIGHT NOW in successful operation on thousands of fast-stepping cars.

Get behind this and watch sales climb! It's new—different—finer and better, and it gives a new sweep and zest to motoring. The NEW and patented Kingston Regenerator consists of a combination exhaust and intake manifold as well as carburetor for use on Ford cars and trucks, replacing standard carburetor and manifold equipment without the use of additional parts. Designed and built by experts, it means new power, added pep and life, easy starting and snappy acceleration, with a factor of fuel economy that makes it pay for its cost in a very short time. Backed by our vigorous merchandising policy and intrenched in its own solid merit, it means the strongest selling item of your line.



Right now! Something hot! Our big consumer advertising campaign is in full tide. Tie into this good business.

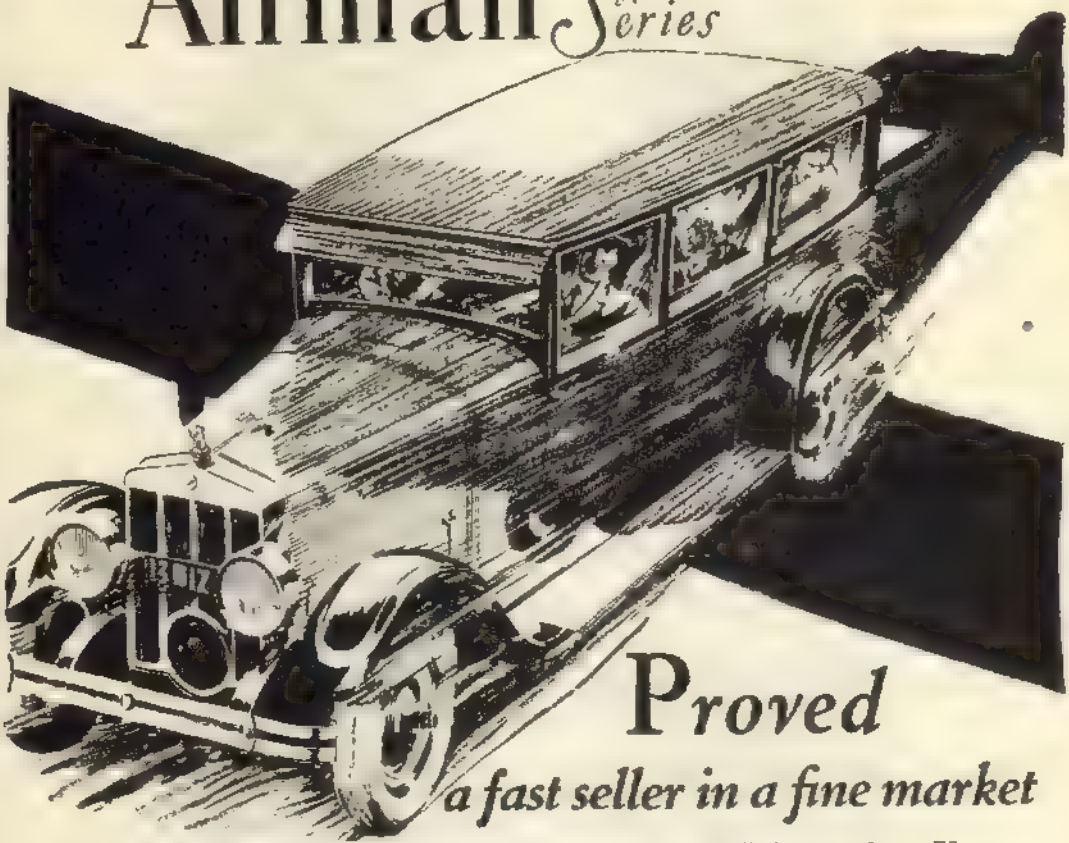
CONCEIVED IN THE SPIRIT OF AVIATION'S PROGRESS

FRANKLIN

Airman *Series*



Proved

a fast seller in a fine market

AVIATION—heralding a new era of fast travel, dramatically endorsed the Franklin principle of air-cooling. For the sustained high speed necessary to record-making distance flights, air-cooled motors have invariably been used.

Franklin has always been a valuable and profitable franchise—now, with the introduction of the new Airman Series, it is even more desirable.

The public is demanding the Airman's exclusive features. Motorists want its aviation-proved principle of air-cooling—they want its efficient performance—its luxury and all-day comfort. You can profit by this demand.

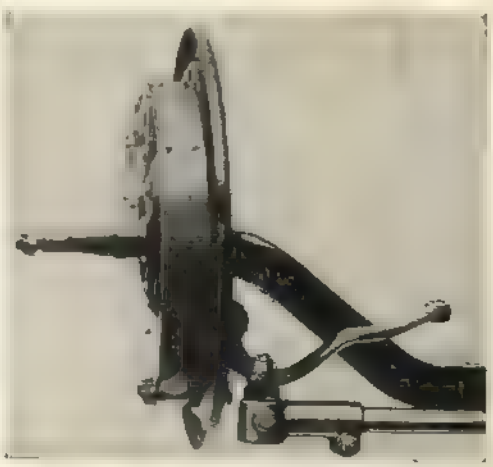
And more—Franklin offers you a more permanent business. The Franklin Owner generally buys *another* Franklin. Thus you can easily build up a loyal clientele.

The dealer history of Franklin should be of great significance to you, for Franklin is outstanding for its long-continued dealer connections.

There may be very profitable Franklin territory open in your locality. Write for full Franchise details today.

FRANKLIN AUTOMOBILE COMPANY • SYRACUSE, NEW YORK

Thompson Eccentric Tie Rod



Right—Eccentric socket design reduces distance from ball stud to end of rod to ½ in. Left—Details of end of tie rod showing wedge-shaped bearing held against ball stud by U-spring.

AT the Detroit plant of Thompson Products, Inc., the Thompson eccentric tie rod has recently been developed.

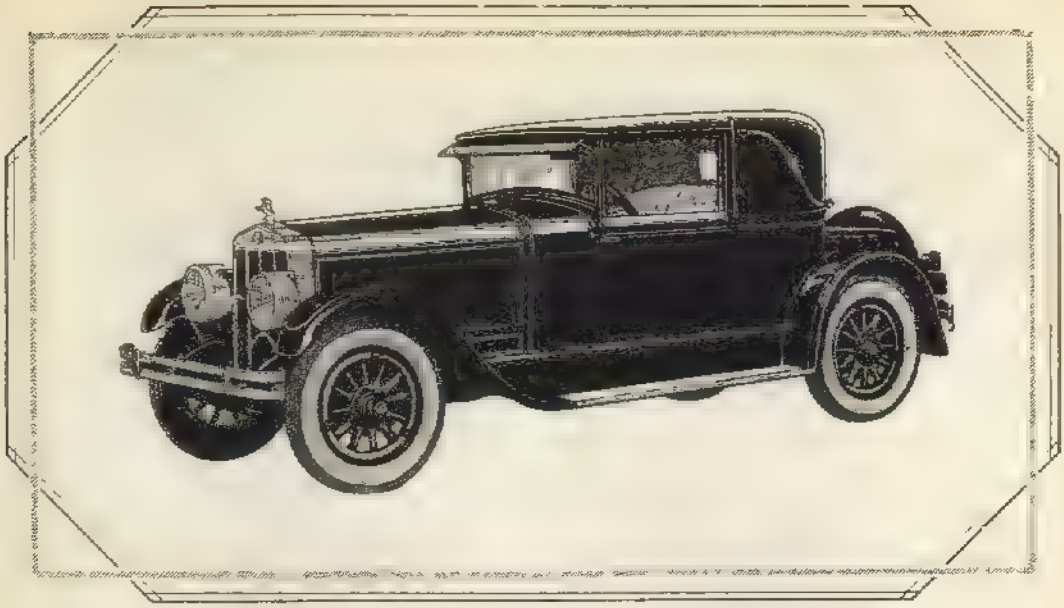
The distinguishing feature is a new style bearing into which the ball studs on either end fit. These bearings consist of two pieces which are concentric with the axis of the ball stud, as shown at the right and give a wedge shape to either half. Under pressure from a U-shaped spring shown, which is applied to the wider edges, the narrow edges of the wedges are closed in toward each other around the ball stud. This feature takes up any wear and keeps the ball and socket joints permanently in their close fitted condition, thus preventing any tendency toward shimmying caused by loose tie rod joints, rattles and pounding.

Another feature is small end clearance, the new tie rod with its vertical sockets measuring only ½ in. from the ball stud to the end of the rod.

Since the rod is hung on to the steering arms, and the shank of the ball stud passes through a hole in the socket smaller than the diameter of the ball stud the rod cannot fall from the balls. All working parts are sealed against grit and water.

From a field maintenance standpoint the new tie rod is desirable in that its construction permits adjustment of the wheel tram without disconnecting either end. This feature is made possible by the right left-hand thread on the rod element and ends.

Wolverine 5-passenger sedan lists at $1,295



*F*ranklin dealers and *F*ranklin owners stay with *F*ranklin

Franklin is noted for two things—to a greater degree than almost any other motor car. Franklin has a greater percentage of repeat sales—and Franklin dealers continue longer under the Franklin franchise.

The reason for the first is that Franklin buyers find they have purchased a *real* automobile—they are satisfied there is no better—they are anxious that their next car be *another Franklin*.

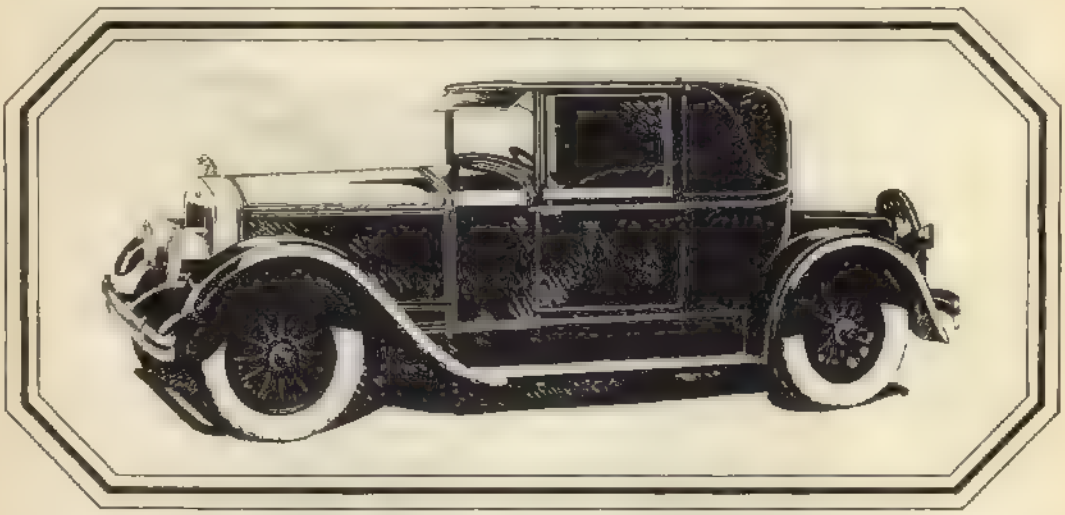
The reason for the second is of course, mostly because of the first fact. Dealers find that after selling Franklins a few years they have an established clientele of loyal Franklin owners. Dealers make money with Franklin and therefore are satisfied to continue with Franklin.

If you are in a small town, you should have a $2500-$3000 car in your line, and you can *very profitably* make that car the Franklin. Your lower-priced car buyers do not continue to buy low-priced cars. They graduate financially into the fine car field. Are you losing the fine car sales? Franklin offers an unusual profit-opportunity to small-town dealers. May we send you the complete details?

Air-cooled

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, NEW YORK

FRANKLIN



To the Dealers in small territories selling lower-priced cars

EVERY month since the 25th Anniversary Franklin was introduced, Franklin sales have shown an increase over the corresponding month of the preceding year. For 1927, Franklin shows the greatest rate of increase in the whole fine car group.

Who sells the $2500—$3000 car buyers in your town? Do you hold the customers who "grow up" financially or do they move on to another dealer?

Adding the Franklin franchise to your present business need not involve a large investment. The nationwide recognition of the air-cooled motor (and of Franklin's many other *exclusive* features) means that, with the Franklin franchise you would have an excellent claim on a far larger group of prospects—You would enjoy a number of sales each year which represent worthwhile extra profits added to your present total.

If there is no Franklin dealer in your immediate territory, a letter to us today may open the way to a substantial profits increase *this year!* Why not get the facts?

Control at Nozzle!
Every gallon recorded!
Every measured gallon positively delivered!
Power-operated!
Speed!
Beautiful appearance!
Simple, dependable construction!

The Most Sensational Pump Announcement in 20 Years

Again Fry steps out and leads the entire field by giving to the industry a brand-new development in a "gallonage-getting" pump that will startle the industry.

For here is an announcement of unprecedented importance to buyers and sellers of gasoline in all parts of the country.

Here is an epochal achievement which is revolutionary, so new and unique are the innumerable engineering refinements.

Here is, without question, the greatest advance in gasoline pumps made during the last twenty years.

For years the great Fry research and engineering departments have been developing this new unit which is now perfected.

This new and superior gasoline pump is in every respect the ideal pump that every gasoline seller in America has been waiting for.

Never did buyers expect to find in one pump every single element that they have been demanding for years. Yet here it is.

You who operate gasoline stations know the possibilities of such a great new unit as the Fry Super-Twin.

We are now ready to demonstrate the many outstanding advantages of the new Fry Super-Twin—the world's latest and greatest gasoline pump.

Get in touch with our nearest representative for full particulars or write the factory so we can arrange for an early demonstration.

New STEELCLAD BUSHINGS

For Spring Eyes, Steering Knuckles and Tie Rods

Seldom needs Reaming —But Easy to Ream when necessary

Triple Wearing

To rebush a car with STEELCLADS you simply press the bushing into place. Only under extraordinary conditions need STEELCLADS be reamed. Therefore, when you rebush with STEELCLADS, you can tell your customer that his bushing troubles are over.

STEELCLADS are accurately burnished to specified size by a new process, so that reaming is seldom necessary.

Yet, if you *must* ream, due to mis-alignment of the hole, you have in STEELCLAD an exceptionally hard bronze bushing that can be reamed *quickly* and *easily* with a straight reamer. Never before was there a bronze bushing that combined extreme hardness with easy reaming qualities.

And when you find it necessary to ream a STEELCLAD, you'll find that there is enough bronze in it to meet all reaming requirements, with plenty of bronze for wearing surface.

On your next rebushing job, give your customer the best there is—STEELCLADS. He'll appreciate it, and you can do a better job with less labor.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

From days when the ancients conceived the sun as a chariot of fire sped by steeds of flame, men have dreamed and striven to harness heat to useful power.

A Great Companion Invention to the Super-Six Principle -

Turns waste heat to power

This new companion invention to the Super-Six Principle converts heat wasted in all other types, into useful power.

Together they combine the highest efficiency in power generation, and the maximum efficiency in power transmission ever achieved within our knowledge. It makes Hudson the most economical car per pound weight in the world.

Steam Engine Smoothness and Power

The new Hudson motor delivers a flood of rugged power from standing start closely resembling the mighty and elastic power of the steam engine. It eliminates spark knock. It prevents oil dilution. Ordinary gasoline gives the results sought through special high-priced fuels.

And at all speeds this power is buoyant, vivacious and instantly answerable to the slightest throttle touch.

HUDSON *Super-Six*

STANDARD COACH $1295 STANDARD SEDAN $1 95

Custom Built Models 7-PASSENGER PHAETON BROUGHAM 7-PASSENGER SEDAN

Hudson Miles Are Master Miles

With the Super-Six Principle Freed to the Limit

The smoothness with which the Super-Six glides from standing start to high speed is totally different from the violent lunge with which high powered cars usually get under way

Acceleration even from high speed is always available. The flow of power comes in a smooth stream of energy as it does from an electric motor. This is a notable mark of smoothness that is available only to the Super-Six principle now freed to the limit of its capacity.

And the chassis of both Hudson and Essex have been specially designed to make full use of these new limits of speed, power and safety.

Coach $1285

yes Everyone says
"Nothing like it in the world"

The mere announcement of the Super-Six principle, freed to the limit, focused on Hudson a dramatic public expectancy such as never awaited any other car. In appearance and value, as well as performance, it is the most talked of car of the year.

New riders, new buyers and thousands who merely witness its vivid dash on the road are saying "There is nothing like it in the world." And from the first day orders have increasingly exceeded production, now the largest in Hudson history.

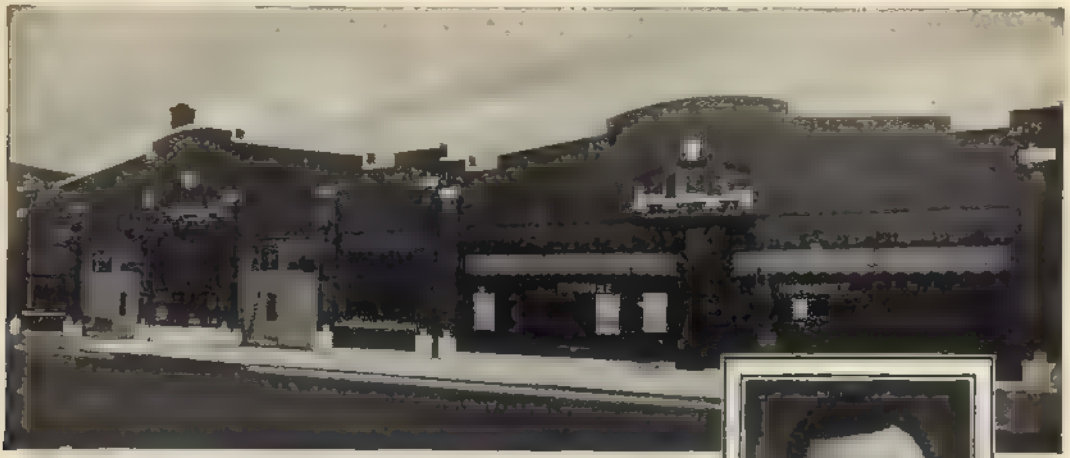
HUPMOBILE DEALERS MAKE MONEY



Gran Brothers' establishment has doubled in size in the past seven years. Original garage is shown at the left.

Steady Profits For Seven Years With the Hupmobile Franchise

Emil Gran, operating a repair shop in Chicago, applied an expert's knowledge of automobile values when he selected the Hupmobile franchise among many offered him in 1920.

Mr. Gran started the firm of Gran Brothers in Austin, a Chicago suburb, in that year and sold twenty-four Hupmobiles. In seven years their place of business has doubled in size and they employ 19 people. Gran Brothers have contracted to sell 175 Hupmobile cars in 1927.

This firm has placed more than 500 Hupmobiles in a territory that was little more than open prairie when they started business. Profits have steadily grown and Hupmobile stands second in volume of sales throughout this district.

Dealers or other business men interested in reports from Hupmobile dealers in their own vicinity may secure this information by writing the factory.

"The policy of Hupmobile and its distributors in providing intelligent cooperation and sales helps to dealers, has been most valuable to us in building up our present fine business."

EMIL GRAN
Gran Brothers,
Austin, Ill.

* * *

Details of the Hupmobile contract—pronounced the most liberal in the industry—will be sent upon request.

HUPP MOTOR CAR CORPORATION

Wanderer—*Germany*

By makes of cars, types of cars, or geographically, the preference for Timken Bearings is really universal. In this country, so great is the preponderance of Timken-equipped makes, that selling influence is put into the mere mention of Timken Bearings. This prestige must be based upon the mechanical excellence which alone causes European engineers to adopt Timken Tapered Roller Bearings.

The Timken Roller Bearing Co., Canton, O.

The Wanderer and other German, Continental and British cars are Timken-equipped. There are Timken plants in England and France.

HUPMOBILE DEALERS MAKE MONEY

"A Hupmobile contract is far ahead of all others we know. The factory service policy is 100% co-operation. We would not change our contract with any three others doing even a greater volume of business."

A. H. LATTA
President

A. H. LATTA, INC.
Atlantic City

Dealers or other business men interested in reports from Hupmobile dealers in their own vicinity may secure this information by writing the factory.

A 300% Increase in Sales with Hupmobiles since 1922

In 1922, the first year Alex H. Latta, Incorporated, Atlantic City, sold Hupmobiles, the firm did a gross business of $78,000. Last year, Hupmobile sales ran up to $271,000—an increase of more than 300% in annual volume.

"We were first interested in a Hupp franchise by the ability of an old Model N to pull our of mud holes and ditches and to tow trucks and cars of all sizes and weights to our shop," writes President A. H. Latta.

"When we left the truck business, we looked for a passenger car that would stand up and not worry us to death trying to service it. We went no further than the Hupmobile and we made no mistake, for our business has increased each year."

A. H. Latta, Incorporated, report the remarkable average of 40% repeat sales to former Hupmobile owners, indicating the exceptional owner-loyalty which has become one of the most valuable assets of a Hupmobile dealer.

We will gladly forward details of the Hupmobile contract to interested dealers upon request.

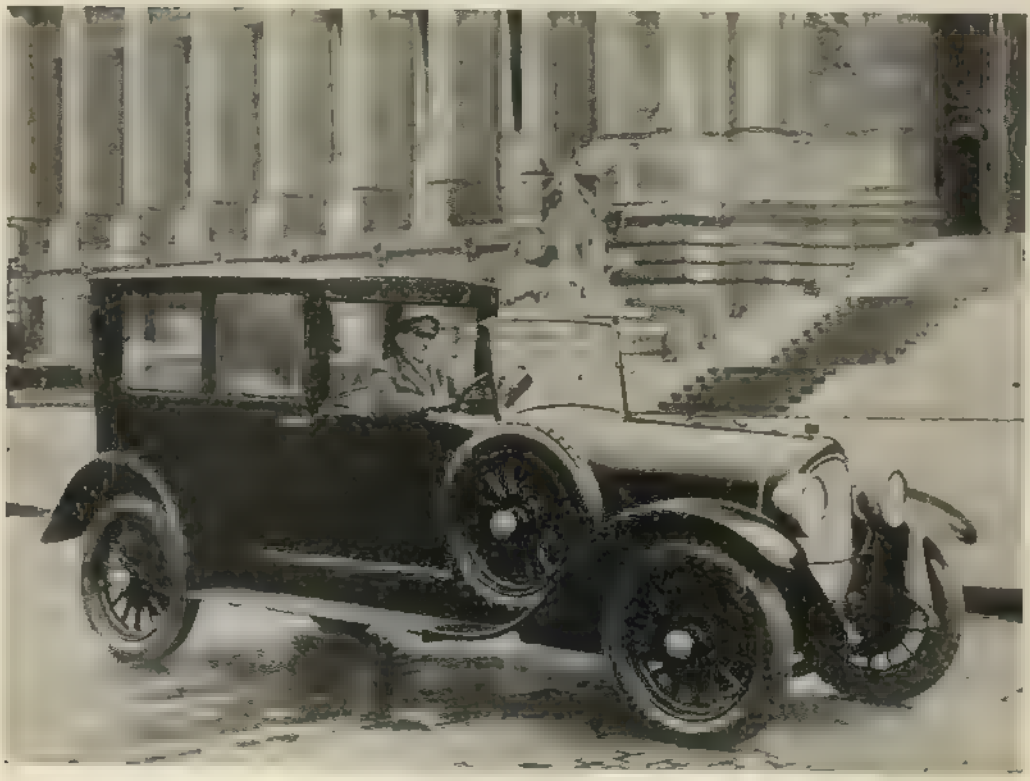
The Delaunay-Belleville is Timken-Equipped



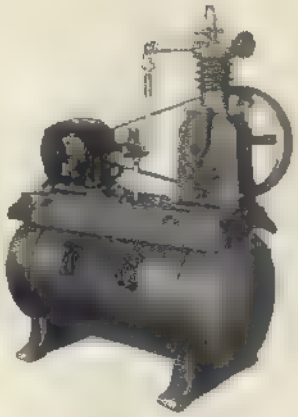
Timken results come only from Timken Bearings. That is why many of the great European motor car manufacturers, like Delaunay-Belleville, use Timken Tapered Roller Bearings—a matter of purely engineering preference.

Beneath the prestige and sales-leverage of the phrase "Timken-Equipped" there is always the plain fact that Timken-equipped cars *are* better.

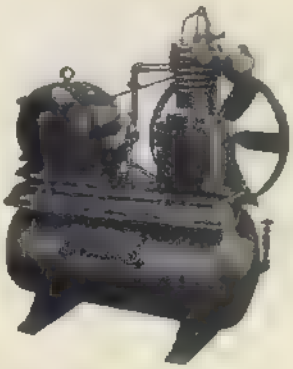
The Timken Roller Bearing Co., Canton, Ohio

Why?*

Have 70% of all spray gun equipment manufacturers standardized on KELLOGG Air Compressors?



EM 261X



EM 152X

* They actually develop more air per horsepower and so are more economical.

* They are designed to eliminate oil pumping—no other compressors have this feature.

* The patented KELLOGG lubrication insures longer life and less expense for maintenance—an exclusive feature.

* KELLOGG unloaders are more efficient.

* In spite of these highly important features, KELLOGG Paint Spraying Compressors cost no more and in many cases less.

Insist on KELLOGG Compressors when you equip your paint shop

Kellogg Manufacturing Company

Stock Car Racing Revived After Fifteen Years

STOCK car racing, the first event of its kind in fifteen years, opened up a former field of speed endeavor for the 1927 season, when a 75-mile event was held on May 7, over the mile and a half board speedway at Hammonton, N. J.

The outstanding feature of the event, held prior to the 200-mile race for the 91½ in. racing cars, was the close finish between the three leading cars. Only 46/1000 of a second separated the first and third cars.

Tom Rooney, driving a Stutz roadster, led the field of fourteen cars across the finish line, covering the fifty laps in 52 minutes 10.54 seconds, at an average speed of 86.247 miles per hour. Wade Morton behind the wheel of an Auburn roadster finished second, 23/1000 of a second behind Rooney. In third place, the same distance behind Morton, was Zeke Meyer, driving a Paige roadster.

Strictly Stock Entries

Entries were restricted to strictly stock cars being under 300 cu. in. displacement. No changes were made in the cars except the technical committee ruled any system of fuel delivery might be installed. Removal of the fenders, running boards and glass from the windshield was permitted, purely in the interest of safety. Contestants were also allowed the use of the lowest rear axle ratio offered as optional by the car manufacturer.

From the interest shown by the 35,000 spectators stock car racing may undergo a healthy revival on the A. A. A. controlled tracks. The majority of car owner spectators were keen to see the models of the makes they drive personally, compete on the boards. The closeness of the race gave just the proper touch to the event.

Several lessons were brought out in the competition. It was evident an adequate fuel supply system was necessary if a car was to maintain a high rate of speed. The race indicated the need of better valve spring keeper design to prevent failure when an engine is subjected to high speeds for intervals of an hour or more.

What Will Be the Outcome

It was also demonstrated the center crankshaft bearing must be designed to stand heavy loads incident to high speed performances. It was interesting to note that none of the contesting cars had more than .005 in. piston to cylinder clearance and that no seizures were encountered.

It would not be surprising to see stock sport models introduced within a short time embodying the latest developments in engine, chassis and body.

Just what trend stock car racing will take will only be demonstrated as the contests are held at the various speedways. It is evident now that stock car racing has to be given deep and considerate thought by the manufacturers. No longer will manufacturers be able to make claims of speed and performance in print without evidence to back it up.

While it is rather early in the game, with only one event held, the individual car owner wants to see just what manner of performance his car will make in a contest, and not what a special built stock car will do in competition. Future contests will probably be of such a distance as to more thoroughly test the capabilities of the cars competing, thus bringing out any faults which would not crop up in a shorter test. In this man-

(Turn to page 58, please)

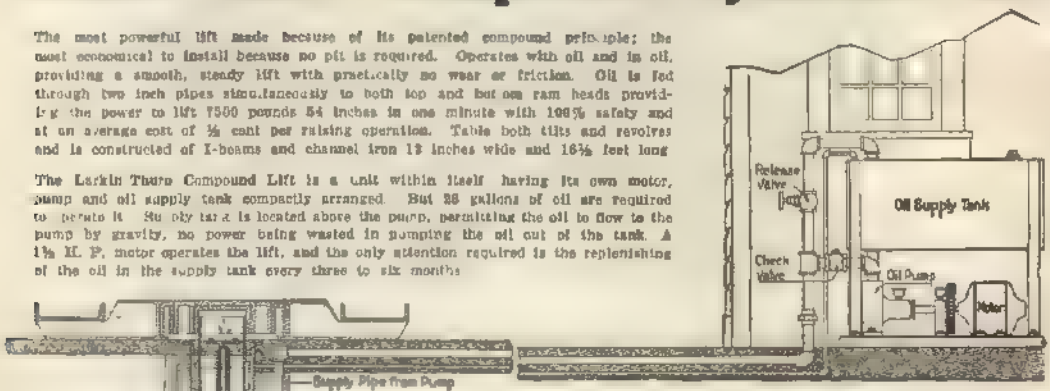
Tom Rooney, being awarded the $1,000 cup for winning the race with the Stutz. In the group, left to right, are F. E. Moskovics, Rooney, C. E. Schwab and C. S. Crawford

Start of the 75 mile stock car race, the first held in this country for 15 years

Larkin-Thuro Compound Hydraulic Lift

The most powerful lift made because of its patented compound principle; the most economical to install because no pit is required. Operates with oil and in oil, providing a smooth, steady lift with practically no wear or friction. Oil is fed through two inch pipes simultaneously to both top and bottom ram heads providing the power to lift 7500 pounds 54 inches in one minute with 100% safety and at an average cost of ½ cent per raising operation. Table both tilts and revolves and is constructed of I-beams and channel iron 13 inches wide and 16½ feet long

The Larkin Thuro Compound Lift is a unit within itself having its own motor, pump and oil supply tank compactly arranged. But 38 gallons of oil are required to operate it. Supply tank is located above the pump, permitting the oil to flow to the pump by gravity, no power being wasted in pumping the oil out of the tank. A 1½ H. P. motor operates the lift, and the only attention required is the replenishing of the oil in the supply tank every three to six months



Ask Your Larkin Jobber

— OR WRITE FOR BLUE PRINTS

The Larkin-Thuro Compound Hydraulic Lift will bring you increased business and save labor time. Ask your jobber for details or write to us for blueprints, specifications and full details of the advantages of this lift over any other lift made. Ask your Larkin-Thuro jobber or write us today.

AMERICA'S FIRST TRULY FINE SMALL CAR

the little MARMON 8

Above everything else in the industry today, these two facts stand out

First—That the time for the truly fine small car has arrived.

Second—That Marmon has done an exceptionally splendid job of interpreting a really sound idea, as evidenced by the tremendous ovation accorded the little Marmon 8 at the New York automobile show and at prior showings throughout the country.

MARMON MOTOR CAR COMPANY, INDIANAPOLIS

The greatest proving ground in the world

THE INDIANAPOLIS MOTOR SPEEDWAY
WHERE MARMON CARS OF THE PAST DECADE
HAVE BEEN PROVED OUT

CONGRATULATIONS are coming from everywhere on what has proved to be the greatest automobile success of the times.

Little Marmon 8 test cars—an almost constant sight in the Indianapolis Speedway during 1930

The little MARMON 8

EVERYONE says of the little Marmon 8 that in addition to being about the fastest thing in the world, it appears so sturdy and well built. Probably no small car was ever so staunchly constructed or so thoroughly proved.

Some of the first experimental models were sent across the continent—through the Rockies and the Sierras—and across the Mojave Desert.

Others were run day and night for months on the Indianapolis Speedway—scene of the famous annual international 500-mile sweepstakes. Here speed was gauged by electrical timing.

That is why we so confidently make some rather unusual claims about its performance—and proudly put the Marmon nameplate on it.

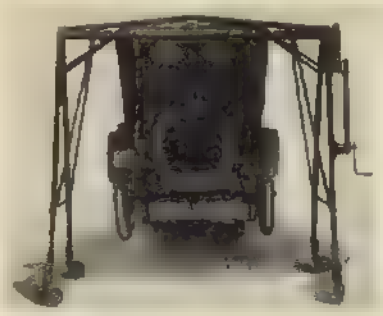
Manley Portable Garage Hoist

Manley Mfg. Co.
York, Pa

THE above company is producing a new pressed steel portable garage hoist. By means of a platform that is a part of the hoist, this piece of equipment can be used for lifting



car and truck bodies. Other hoisting jobs for which it is fitted are removing the engine or other heavy units from the chassis or lifting a front or rear end of a car or light truck. The price of the hoist alone is $85.

Whipple Steer-O-Nob

Whipple Mfg. Co.
33 W. 60th St., New York City

THIS device, affording ease of steering, has been brought out by the above company. It consists of a black walnut knob with nickeled base and adjustable clamp which fastens to the rim of the steering wheel and firmly grips all sizes and kinds of wheels. It is said to afford better control of the steering wheel when turning or parking the car and permits relaxation when driving. Price is $5

Manley Auto Lifter

Manley Mfg. Co.
York, Pa

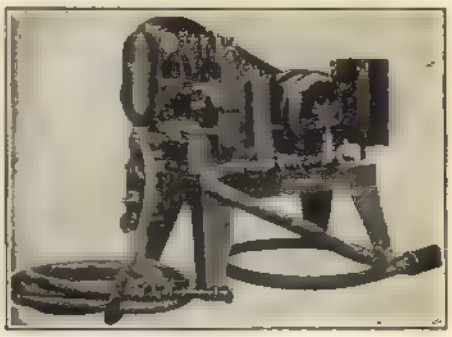
A FEATURE of the Universal Auto Lifter offered by the above company, is it lifts from the bottom, thus eliminating overhead chains and extensions. This portable lifter can be used in unloading double-decked freight cars. It is also designed to raise the front or rear end of an auto, for which operation a longer base is furnished. With the long base an extension arm is supplied by means of which the lifter may be used to remove motors, transmissions and bodies. The high lift is 7 ft. 2 in. and the lifting pad lowers to 6 in. The lifter with attachments is priced at $115 and with the short base only lists at $85.

The company is also offering a 5-ton High-Draulic Jack especially designed for bus and truck work. This jack has roller bearing wheels and ball bearing casters. The jack, equipped with steel wheels, is priced at $125 and may be had with rubber tires for $145

Curtis Hydraulic Washer

Curtis Pneumatic Machinery Co.
St. Louis

A HYDRAULIC car washer is now being manufactured by the above company. Hydraulic outfits are made in three sizes: one-nozzle with 1 hp motor, two-nozzle with 3 hp motor and two-nozzle oversize with a 2 hp motor for faster

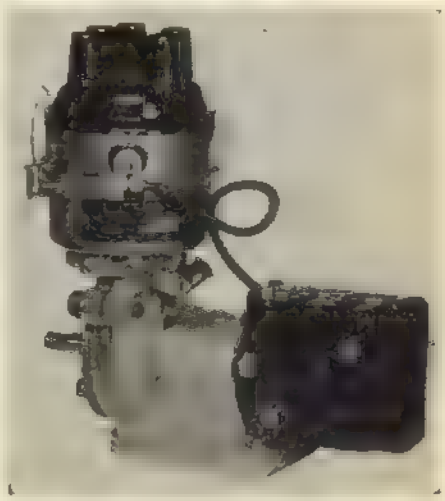


work. Guns provide for both chassis wash and body spray and have a spring automatic shut-off. Nozzles can be locked in either spraying position. The pump has three cylinders with bronze valves, drop forged crankshaft and long-skirted pistons. Drive from motor is by roller chain which is fully guarded. An automatic governor by-passes water when pressure exceeds 300 lb. The outfit starts unloaded, preventing blowing of fuses by excess motor starting current. Eight feet of 1 in. suction hose, with strainer, and 25 ft. of ½ in. discharge hose for each nozzle is supplied with each outfit.

North East Battery Ignition Unit

North East Electric Co.
Rochester, N. Y.

A HEAVY-DUTY battery ignition unit intended for use on trucks, buses and taxicabs has been placed on the market by the above company. The unit is adapted for standard S. A. E. magneto base mounting. Ball bearings are used



in place of straight sleeve bearings. The ignition coil is iron-clad, water-proof and easily accessible. An automatic spark advance is incorporated in the unit, with supplementary manual control. Lubrication requirements are minimized by use of grease packed ball bearings.

Wharton Cushion Guard Rail

Churchville Mfg. & Laboratories Co.
Philadelphia, Pa.

RUBBER cushions are employed to absorb shocks in the Wharton cushion guard rail. The rails are furnished in either Hilo crystal

finish or in nickel plate which is guaranteed rustproof for five years. Rear bumperettes to match also are available.

Rose Side Awnings

Frank Rose Mfg. Co.
Hastings, Neb.

PROTECTION from the sun is said to be provided by these side awnings. These are snapped into place, and no brackets are required. They are made of high grade awning material, in stripes with fringed edge. A 5/16 in. steel rod forms the bottom and ends of the awning and is bent at each end so as to fit into the channel felt of the window, the spring tension of the rod holding the awning in place. Price varies from $2.50 to $4.75, according to size and material.

Universal Windshield Cleaner

Monarch Tool & Machinery Co.
522 S. Clinton St., Chicago

MANUALLY operated windshield cleaners are being produced by this company. These cleaners are being made in two models, a single cleaner which wipes one side of the windshield and a double cleaner, which cleans both sides. The pressure exerted on the glass by the wiping arm is adjustable and the installation is easily

made by drilling a hole through the top of the windshield or by clamping with the extra bracket. These cleaners are packed in individual cartons. Prices: single cleaner $1; double cleaner $1.25.

Tiffany Rad-I-Grams and Town Plates

Tiffany Aluminum Products Co., Inc.
St. Louis, Mo.

RAD-I-GRAMS are highly polished cast aluminum initials designed for attachment to the front of the radiator. These, together with the town plates, have recently been added to the line of the above company. Each Rad-I-Gram is packed in an individual envelope and is furnished complete with rods for attaching to the front of the radiator. List price for each initial

is 45 cents and a set of three retails at $1.25. Dealer assortments of 60 or 100 letters are attractively packed for counter display purposes. Town plates for the principal cities in both the block and script type are stocked and are made of highly polished cast aluminum. These are packed in individual envelopes complete with threaded rods for attaching. List price block type $1, script type $1.50.

Bosch Universal Ignition Coil

American Bosch Magneto Corp.
Springfield, Mass.

AN ignition coil, which, it is claimed, can be applied to any car is made by the above company. It has a very unique L-shaped bracket which does the work usually done by brackets installed on the end or side of conventional coils. The portion of the bracket parallel with the coil is slightly curved so that it can be applied to a generator where an installation of this sort is used on the car. It is also provided with a universal condenser which is inclosed in metal. The coil, complete with bracket, lists at $5.50 and the condenser at 75 cents.

Head-Base for Hi-Lo Horse

Garage Utilities Co., Inc.
Hackensack, N. J.

A MALLEABLE iron detachable head base 8 in. in diameter is being manufactured for use with Hi-Lo horses. After the head is

fitted to the horse a jack can be placed on the head and with the model A Hi-Lo horse a maximum height of 41 in. can be obtained. With the model M and model B horses maximum heights of 49 in. and 59 in. respectively can be obtained. Price of head base $2.50.

Manley Hydraulic Jack

CAPACITY 2½ TONS

The Fastest, Easiest Jack you ever used

Operates Like a Barber's Chair

The hydraulic principle eliminates most of the frictional losses, making it easy to lift the maximum load with one hand.

The Jack lowers automatically when you press the foot pedal.

From dead flat to Full clearance

(Minimum height 5¼")

With any balloon tire
(Lift 10 inches)

Jack may be operated by long or short strokes with the handle in any position from vertical to horizontal, making it easy to use under overhanging bodies or in close corners.

Wheels are equipped with roller bearings and casters with ball bearings, making it easy to roll cars over rough floors.

Jack is provided with safety valve, making it impossible to overload.

Cat. No. 555—Manley Hydraulic Jack (steel wheels).....$48.

Cat. No. 556—Manley Hydraulic Jack (rubber tires).....$59.

Your Jobber has them in Stock

MANLEY MFG. CO., -- YORK, PA.

MANLEY

WRECKING CRANES

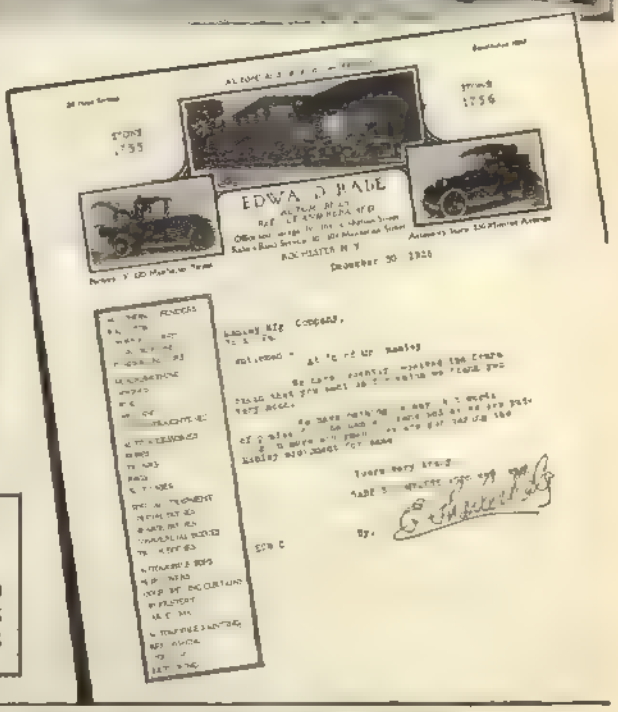
Garage men prefer them

Mr. Rabe Has Standardized on Manley Equipment

Mr. Rube operates a fleet of service cars. He specializes on road service and his experience has satisfied him that "Manley Equipment is the Best."

The Manley Wrecking Crane is, we believe, the most satisfactory piece of service equipment on the market today. Ask the men who operate fleets of service cars. Almost invariably after they have installed their first Manley Cranes they will use nothing but Manleys. Watch for them on the road. There are more Manleys than any other make.

Whether it is a Crane, a Press, a Hydraulic Jack or some other piece of service equipment, you can depend upon it one hundred percent if it is a Manley product



MANLEY CRANES ARE AVAILABLE IN THE FOLLOWING SIZES:

No. 101, 2½ Ton $100
No. 107, 3½ Ton $135
No. 105, 5 Ton $275

Order from your Automotive Jobber now and be equipped to bring in those Profitable Rebuilding Jobs.

For new Catalogue describing the entire Manley line write to

MANLEY MFG. CO., YORK, PA.

American *Hammered* Piston Rings

THE BEVEL (on the upper edge) spreads a uniform film of oil on the cylinder walls, insuring proper lubrication.

THE GROOVE (on the lower edge) always stays full of oil, a further insurance of perfect lubrication.

OILSLOT

The oil governing Piston Ring

50¢

No higher than ordinary oil rings

THE SLOTS are cut through the lower edge of the ring and the oil does not have to leak past the face of the ring before it can drain off through the slots. There is no tendency for these slots to clog up.

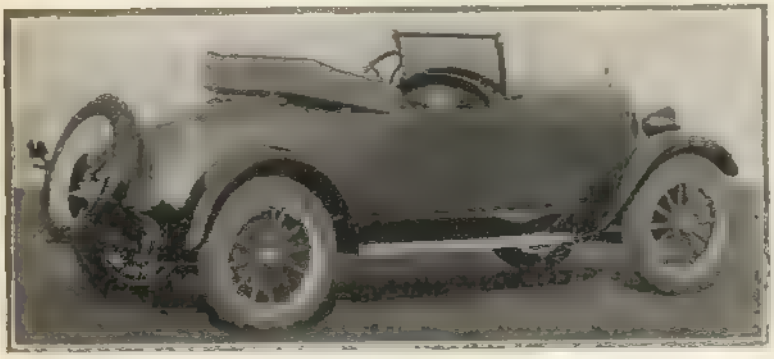
HAMMERING creates outward tension, causing ring to "hug cylinder walls" throughout the life of the ring.

American Hammered Piston Ring Co. *Baltimore, Md.*

World's Largest Manufacturer of HAMMERED Piston Rings

Little Marmon Brougham at $1,895

Latest addition to the eight line offered in a number of color options. The company reports the addition of nearly 300 dealers and distributors since the first of the year



Essex 70 M.P.H. Speedster

Two passenger speedster equipped with lower axle ratio is guaranteed to do 70 miles per hour, and lists at $700. Equipment includes instrument board, gasoline gage and rear traffic signal

Kissel Special Brougham

A late addition to the 8-75 line listing from $2,095 and upwards depending on equipment desired. Color options are Lenglen green with black wheels and green gray light with Winton green wheels, both with hairline stripes in contrasting colors

Studebaker Commander Coupes

Two coupes, a four and a two-passenger style, are now offered on the Commander Big six chassis. The four-passenger body is upholstered in mohair and lists at $1,645; the two-passenger model is upholstered in genuine leather and lists at $1,545

Siko-Lite Non-Glare Bulb and Automatic Dimmer

Remo-Lite Corp.
Meriden, Conn.

THE Siko-Lite headlight bulb, made by the above company, is equipped with a concentrated filament of 21 c.p. the ends and sides being covered with a highly reflecting material arranged so that all the internal reflected light passes out of the bulb and produces more light. It is highly efficient in penetration during foggy and rainy weather, and also functions as a non-glare with automatic dimming

Jefferson Auto Lamp Tester

Jefferson Electric Mfg. Co.
Chicago

THE tester made by the above company, in addition to testing all automobile lamps has a socket for testing all flashlight lamps. It is mounted in a black enameled case and equipped with two nickeled auto lamp sockets, a flashlight socket, a bracket for attaching to wall or counter, seven feet of cord, a separable plug and a switch for reducing the voltage. List price, $4.00; west of Rockies, $4.10

Hawkeye Moto-camp Portable Refrigerator

Burlington Basket Co., Burlington, Iowa

THE above company is manufacturing the new portable refrigerator for automobiles, which makes it possible for motorists on camping tours to keep food fresh and wholesome.

Kokomo Onyx Gear Shift Ball

Kokomo Automotive Mfg. Co.
Kokomo, Ind.

THE above company has just announced the new gear shift ball made from imported onyx. They are made in two styles, locking and non-locking types. The locking type is held in place by a new locking device, composed of a highly tempered Swedish steel flat spring, which holds the ball firmly in place and prevents its removal. The Fulton Co., Milwaukee, is exclusive sales representative for this and all other Kokomo products.

Marquette Tire Service Jack

Marquette Mfg. Co.
St. Paul, Minn.

THE new and improved jack announced by the above company employs the cantilever lift principle using traveling pawls and a stationary pawl rack. It is equipped with a new sure grip swivel cap. The jack is constructed of steel throughout, with drop forged pawls and heat treated swivel cap. The jack automatically drops to low position after load leaves cap and cannot drop while load is on. Long handle gives a big leverage. It has a lift of 11 in. from 4½ in., weighs 45 lb. and has a capacity of 1½ tons.

Hempy-Cooper Universal Kon-Rod Reboring Machine

General Equipment Corp.
Kalamazoo, Mich.

THE above company has developed a universal connecting rod boring machine that is said to refinish connecting rod bearings with exceptional precision and speed. It not only refinishes the bearing but also faces off the end of the new bearings in order that the rod will have the proper side play on the shaft. The price is $450.

All-in-One Coil

C. E. Niehoff & Co.
Chicago, Ill.

A NEW ignition coil has been put on the market by the above company. The condenser, resistance and all windings are incased in the coil as one compact unit. It has a condenser within itself and can be easily shunted out if the condenser on the car is to be used. It will operate on all makes of cars and is made in three types: A, B and C. Type A is equipped with a cold weather starting equipment that is embodied in the coil and does not interfere with the normal action of the coil. It is controlled by a push switch on the dash. By pressing the button at the time of starting it produces an intense spark. Type B is the same as Type A, but without the starting equipment. Type C is without the starting feature and is designed to meet modern engineering conditions and is furnished complete with bracket. Types A and B are furnished with two brackets.

MARVEL
Carbureters

LOGICAL DESIGN
AUTOMATIC HEAT CONTROL

THE general use and acceptance of a product is usually in direct proportion to that product's superiority over others.

In the production of Marvel Carbureters, logical designs, based upon the very soundest of proven engineering principles and applied separately to certain carburetion problems, have been applied. The exclusive Marvel feature of applied heat, under automatic control, directly to the throttle where it is needed, has also proved a most important factor in making Marvel carburetion smooth, reliable and economic. Consequently, Marvel Carbureters have been chosen for original installation on Buick, Nash, Oakland and recently, Hudson cars.

There is no more conclusive evidence of the worth of an automotive product as such acceptance. Such acceptance *proves* finally that Marvel Carbureters have correct engineering principles —

Endless Jobs—and Sales —Await this Cleaner

PRESTO-VAC is the whisk-broom size of an electric suction cleaner. ***Presto-Vac*** does a real job in a thousand places where any other cleaner would be impossible, clumsy, or a nuisance. ***Presto-Vac*** brings its power-brush right to the job, as no "attachments" can. And ***Presto-Vac***, far more efficient for its weight than any cleaner ever built, uses only negligible current, equal to one half one 60 watt lamp.

In homes, ***Presto-Vac*** easily does things that are too much work in any other way. In tailor shops and hotels, ***Presto-Vac*** is a sanitary, pleasing, business-builder. For millinery shops, for "cleaning-up shops", and for endless other business uses ***Presto-Vac*** is today the only way.

With life-time motor, with fine lines and balance, with every element of novelty and fascination, ***Presto-Vac*** sells strong over all electrical appliance counters. Progressive jobbers will supply you.

"THE WORLD'S GREATEST OIL RING VALUE"

Why the RADIATOR CAP is the logical place for a motor heat indicator.....

The Moto Meter Company, Inc., is the *pioneer* in the manufacture of motor heat indicators of *every type:* Boyce Moto Meters for dashboard and steering column installation were developed and perfected more than ten years ago—instruments of recognized quality and unquestioned accuracy.

However, the preference of more than 10,000,000 motorists for the Boyce Moto Meter mounted on the radiator cap is so pronounced, we review some of the reasons that have influenced this choice.

ITS principle of operation and performance is unfailing in any altitude, under every driving condition.

Its position is the only place on a car constantly and directly *in the line of driving vision.*

Promotes safety — permits the driver to keep his eyes on the road ahead; a second's inattention might be costly.

Affords relaxation from the strain of constant dashboard attention.

Out front, the one instrument *vital* to the life of the car is away from the confusion of a crowded dash.

The rapid rise of its red column is a definite warning signal of impending motor troubles.

Easy to install, no upkeep, simple in construction—easy to understand.

With a wide selection of models, it adds a finishing touch of beauty to any car without sacrificing utilty.

And—

Everybody's car deserves one!

THE MOTO METER COMPANY, Inc.
Long Island City, N. Y.
THE MOTO METER CO.
OF CANADA, Ltd.
Hamilton, Ontario

The name Moto Meter is the registered trade mark and exclusive property of this company

A properly designed model for every car
List: $3.50 to $15.00

BOYCE MOTO METER

Sell improved *motor performance* .... not just a spark plug!

SPARK PLUGS should always be sold in terms of *motor performance.*

* * *

Every time you sell a set of Moto Meter self-adjusting Spark Plugs you *really* sell a new principle of motor ignition: easy starting, smooth running, quick pick-up, more perfect combustion—in fact, *all* that contributes to improved motor performance. * * *

With its self-adjusting spark gap, new process insulator and many other distinctive features, the advantages of this remarkable plug are quickly evident to the average motorist. When you have pointed out the new principle involved, you have gone four-fifths the way towards the sale of a *set*—the only way to sell the utmost in motor performance; it means greater satisfaction to the user, faster turnover with more generous profits to the dealer.

Spark gap set cold at 15 thousandths of an inch and is to 30 thousandths the instant the engine starts.

IMCO Steel Trunks

There's an Imco trunk for *every* make of car. Drawn from steel with crown cover mounted on full length piano hinge. Cannot warp, sweat or mildew. Rubber weatherstrips make it water tight. Finished in a lustrous black enamel or in lacquer to match standard body colors. Leather straps and handles are optional.

The Imco line includes racks and bumperette units for all cars not equipped with trunk deck. Write today for complete information.

DETROIT METAL SPECIALTIES CORP.
1651 Beard Avenue Detroit, Mich.

When you ask for Innerings you mean APEX

Out of the bewildering confusion of imitations, only one name stands out by itself as the criterion of correct design and guaranteed performance—APEX.

Remember—APEX is the original Innering—the one with the patented design that keeps imitators from using our short, rounded, adjustable points of contact, long, reverse curves that give a velvety cushioning effect, cutting between the crimps that gives an equal racing cushion the entire circumference, and our guarantee tag that insures money back if oil pumping and piston slap is not completely stopped without re-boring; without overheating the motor; without interfering with the oil film. Your jobber has, or can get, genuine APEX Innerings for you.

MYERS *Cyclone* AUTO-WASHERS

A MYERS CYCLONE AUTO WASHER will wash cars—thoroughly—in half the time formerly required. For body work a soft spray soaks and cleans thoroughly without harming the finish. For the hard, caked mud and grease beneath the fenders and chassis, a powerful stream under high pressure literally "wipes it off." A CYCLONE WASHER saves time, labor-cost and water—*and puts real profits into the auto laundry business! Now made in one, two and four-gun sizes.*

Write for Our Book TODAY

For dealers, garagemen, service stations and accessory stores, a Cyclone installation will prove one of the best profit producing investments that can be made. A post card today will bring our book, "Dollars From Mud and Water," and full details of the MYERS Cyclone Auto Washer. GET THE FACTS NOW!

"The Right Bearing For Every Car"

Hidden Strength

The real stamina of a car is not seen from the outside—it is hidden away in the bearings where the heaviest loads are carried. B. C. A. Bearings provide strength at the points where it is most needed. Their accuracy is insurance on the life of the car.

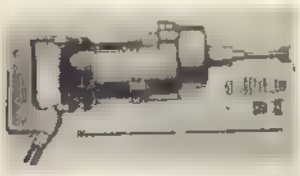
B. C. A. Bearings are the product of "Bearings Headquarters."

Bearings Company Of America
Plant Lancaster, Penna.
Detroit Heinfon Office 1012 Ford Building.

Van Dorn Valve Lapper

Van Dorn Electric Tool Co.
Cleveland, Ohio

THIS valve lapper produced by the above company has ample power to lap valves of all sizes. It is the same construction as previous models except that the spindle is designed to oscillate and progressively rotate. The oscillating movement keeps at all times a proper coating of grinding compound between the high spots on the surface to be seated.



The progressive rotation of travel produces a longer lap to surface the high spots. Universal motor will run on alternating or direct current, with a no-load speed, the rotations are 75 per minute, the oscillations per minute being 700. Weight is 7 pounds. It is completely equipped including two spindle shafts, one long and one short, one lift spring and 3 valve blades. Price for 110 volts is $43 and No. 2 extra for 220 volts or 32 volts.

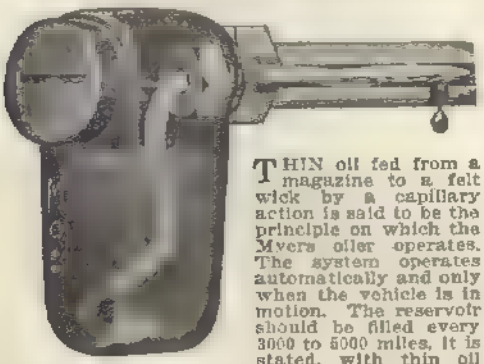
Pacific Rim Tool

Pacific Rim Tool Co.
Cleveland, Ohio

INSTANT adjustability to any size split rim is claimed by the above company for its rim tool. This tool has telescopic legs which radiate from the center. This feature eliminates all possibility of the legs slipping or distorting the rim. The handle will remain set wherever it is left, regardless of the amount of strain on the tool. The arms are hinged and this feature is an added safeguard against springing the rims. Price, $10.

Myers Magazine Oiler

Monmouth Products Co., Cleveland, Ohio



THIN oil fed from a magazine to a felt wick by a capillary action is said to be the principle on which the Myers oiler operates. The system operates automatically and only when the vehicle is in motion. The reservoir should be filled every 3000 to 5000 miles, it is stated, with thin oil from an oil can. The installation is said to be simple and once installed requires no further attention other than the periodic filling. Price, $1.25 each.

Mallory Rotary Ignition Tester

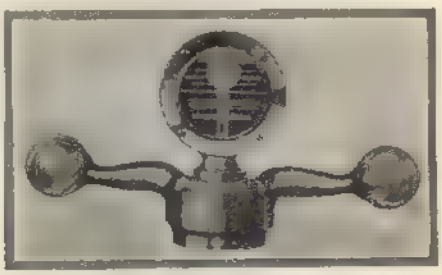
Mallory Electric Corp.
Toledo, Ohio

BY means of a rotary ignition tester manufactured by the above company, it is possible to test the complete ignition system on an automobile. The maker describes it as a disk on which a plug is mounted. The tester is connected in the high tension ignition circuit and when the disk is revolved by means of the attached crank, the manufacturer states that it is possible to locate weak coils. Defective condensers and spark plugs may also be tested by trying them on the disk of the tester.

Neva-Lost Radiator Caps

Welker-Hoops Mfg. Co.
Middletown, Conn.

A NEW radiator cap of the bar type has been added to the line of Neva-Lost radiator caps. This cap is fitted with polished Vitro-Onyx balls and is opened and closed by a self-contained bayonet catch which is operated by giving the bars a quarter turn. In addition to being furnished in sizes to fit practically all popular cars, the new Neva-Lost cap is also designed to fit either the large or small size Moto Meter. The price of the device for small cars is $3.50, for other cars $4.50.



Lupton Ford Glass Rack

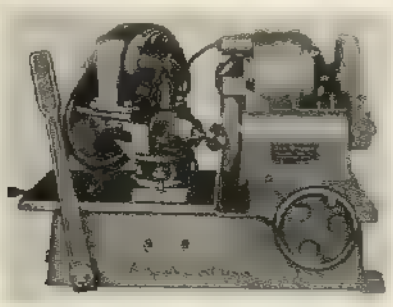
David Lupton's Sons Co.
Philadelphia, Pa.

GLASS totaling $800 net and consisting of 12 sizes of windshield glass and 16 sizes of door and window glass, either with or without channel, are compactly stored in this rack. In the two upper sections the rack is open on both sides permitting the glass to slide in and out easily from either side. The lower structure is divided by a partition permitting the storage of windshield glass up to 18 in. in width on one side and up to 12 in. on the other. Wooden strips extending over the edge of the shelf permit handling without danger of chipped edges. Finished in olive green enamel baked on. Dimensions 8 ft. high, 4 ft. wide and 2½ ft. deep.

Van Norman Model E Valve Refacer

Van Norman Machine Tool Co.
Springfield, Mass.

THE above company announces their Model E two motor valve refacer, to be distributed by the Van Dorn Electric Tool Co., Cleveland, Ohio. It is designed and built for heavy duty work. It retains the features of the Valvo introduced by the company four years ago. It will grind valves up to ⅝ in. stem diameter and 4½ in head diameter. Grinds reseating cutters and valve seat hones to proper angle. Grinds valve lifters, tappets, tappet screws, small spindle bolts, etc. Work head can be turned to 90 deg angle with slide range long enough to grind work having a maximum diameter of 2⅜ in at grinding point on front face of grinding wheel A 5 in. saucer wheel is used to facilitate side wheel grinding. One motor drives the work head and the other drives the grinding wheel The work head is graduated from zero to 90 deg., is driven through a silent gear by the



1/20 h.p. motor and the speed is 380 r.p.m. The grinding wheel is full ball bearing with provision for proper take-up adjustment and the speed is 4740 r.p.m. Both work head grinding wheel slides are mounted on round and flat ways. A special valve chuck is furnished that allows valve stem to be chucked close to valve head above point of wear of valve guide. All chuck head assemblies are tested to an accuracy of .001 in. Independent switches are located conveniently in front of base. Regular equipment includes one ⅝ in. special valve chuck and chuck wrench; one grinding wheel 5 in. diameter by ⅜ in face by ⅝ in. hole, one diamond dressing tool; one cutter resharpening indexing support; one cutter setting gage; one Vee block, one 2 in. Van Norman double-ended roughing and finishing cutter, one ⅜ in pilot for cutter Price for 110 volt, single phase, 60 cycle, a.c., $165. For motors of 25, 30, 40 and 50 cycle a.c., 110 volts and 115 230, 32 volt d.c. add $4.00

Gripper Mud Hooks

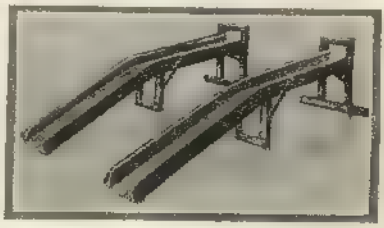
Gripper Mfg. Co.,
536 Lake Shore Drive, Chicago, Ill

THE device illustrated is designed for emergency duty only, such as getting car out of bad ruts, mud holes, etc. The gripper is installed by loosening the set screw, sliding it over tire and then retightening the set screw. Each screw is adjustable ½ in. larger or smaller than the size marked It is said that it will not mar or scratch paint or any part of the wheel and can be used on disk or spoke wheel with equal ease. It is made in all sizes to fit tires from 3½ to 6 in. Listed at prices ranging from $3.50 to $5.00 for set of two.

A. C. E. Portable Inclines

Air Compressor & Equipment Co.
288 East Genesee St., Buffalo, N. Y.

THESE portable inclines are said to elevate the car enough to permit freedom of movement when working under the car. They are placed in line with the car and the car is driven



up the incline. End stops at the end of the level prevent the car from running off. The incline is 3 ft. long and the level 2 ft. long. The car is raised 10 in. from the floor level and is supported by a track 9 in. wide, which has a guard rail 3 in. high. Weight about 85 lb. each.

Goodell-Pratt Electric Drills

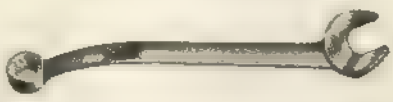
Goodell-Pratt Co., Greenfield, Mass.

SIX different sizes are offered in electric drills by the above company ranging in size from ⅛ in to ⅝ in. The illustration shows the ¼ in. drill which has a no-load speed of 1800 r. p. m., It is stated. The frames of these drills are aluminum castings and are fitted with electric motors, operating on either alternating or direct current. Efficient ventilation is provided and the inlet holes are so placed that chips and dirt will not be drawn into the motor. Gear operated chucks are provided on all sizes, while several types of switches are used, each designed in conjunction with the type of frame for convenience of the operator

Bonney Cylinder Head Wrench

Bonney Forge & Tool Works
Allentown, Pa.

THE above company announces a new chrome vanadium steel cylinder head wrench. It has a hexagonal box head at one end for Ford cylinder head stud nuts and an open end head



at the other end to fit ⅞ in. spark plugs. It is properly offset to make it easy to get at the cylinder head nuts and to assure easiest position in removing spark plugs

Cooper Heater for Chevrolets

Cooper Mfg. Co.
Marshalltown, Iowa

A TOTAL heating area of 164 sq. in. is said to be provided in the heater produced by the above company for use on Chevrolet cars. The heating element is cast iron with a pressed steel jacket, and the installation does not interfere with wires, exhaust pipe, etc., it is said. No alterations are necessary, other than a hole in the upper toe board to receive the register, and the entire installation can be accomplished in one-half hour, it is claimed. A butterfly valve operated from within the car is used to control the amount of heat. Price $7.50

A Napier near Calcutta, India

The Napier—Timken-Equipped

Fine cars of Europe, like fine cars of America, are Timken-equipped. For luxurious performance and exclusive character European engineers select the same bearings which are so nearly universal in this country.

Timken popularity, prestige and sales effect are really the inevitable result of sheer excellence.

HUPMOBILE DEALERS MAKE MONEY

Hupmobile Profits Built His $75,000 Establishment

When George Szabo took over the Hupmobile contract for East Chicago in 1919, he found just seven Hupmobiles operating in his territory.

Today in East Chicago, Hammond and Whiting, Szabo Motor Sales has placed more than 600 Hupmobiles. Out of the profits Mr. Szabo has built his present fine establishment. Last year his net profit was $21,000.

The success of Mr. Szabo in a territory, largely industrial, is being duplicated by Hupmobile dealers in every section of America. Details of the Hupmobile contract, known as the most liberal in the industry, will be sent to interested dealers on request.

Any dealer interested in the progress of Hupmobile dealers in his own vicinity, may secure information similar to the above by writing the Hupp Motor Car Corporation.

"The factory's policy and your close cooperation have been a great help in establishing a business and clientele of which I am very proud. If I were to lose the Hupmobile contract I would go out of the automobile business."

Letter of Mr. Szabo to Chicago Distributor.

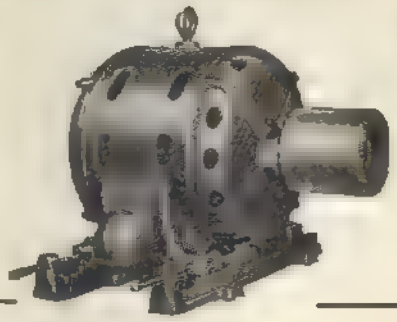
"They Keep a-Running"



7½ Horse Power Century Automatic-Start Induction Polyphase Motor

No Special Starting Controls Required

Any approved single-throw switch can be used for starting Century Automatic-start Induction Polyphase Motors because they combine low starting current with high starting torque.

The fact that no elaborate starting equipment is necessary makes these motors ideal for automatic or remote control.

Operating characteristics are:

1. Starting torque is at least 225% of full load torque.
2. Starting current does not exceed 245% of full load current. Line disturbances reduced to a minimum.
3. Pull-in torque is not less than 125% of full load torque.

Century Automatic-start Induction Polyphase Motors are built in all sizes from ½ to 60 horse power. Temperature rise not more than 40° Centigrade.

Complete information on these motors will be sent on request

Announcing The

OAKLAND
ALL-AMERICAN SIX

ALL-AMERICAN—that's the word! No other word describes it!

* * *

A bigger, better, brilliantly beautiful car. New bodies by Fisher—new chassis—new engine. New standards of performance, endurance and value—and . . . NEW LOW PRICES.

* * *

In the chassis—new factors of reliability and endurance—factors that people have long hoped to get—but never in a car of Oakland's price.

* * *

A longer, deeper, heavier frame more rigidly braced. A new and softer clutch. A new and smoother transmission. New elements of steering ease, 4-wheel brakes. Smaller wheels (19″), larger tires (29 x 5.50″), a longer wheel-base (117″), and an exceptionally low center of gravity.

* * *

And a new engine—the largest used in any car of Oakland's price—212 cubic inches displacement. A crankcase of bridge truss construction—Oakland's famous rubber-silencing principle—and a new combustion chamber design from General Motors' Research Laboratories.

* * *

Now the Oakland-Pontiac Double-Profit Franchise assumes a new high value. And now it is being more persistently sought than ever before. If you are interested in the selling agreement which includes both the All-American Six and the Pontiac Six, write Dept. E - -. Thousands of dealers are writing, so act without delay.

NEW LOW PRICES

2-Door Sedan $1045

Landau Coupe - $1045 Cabriolet $1145

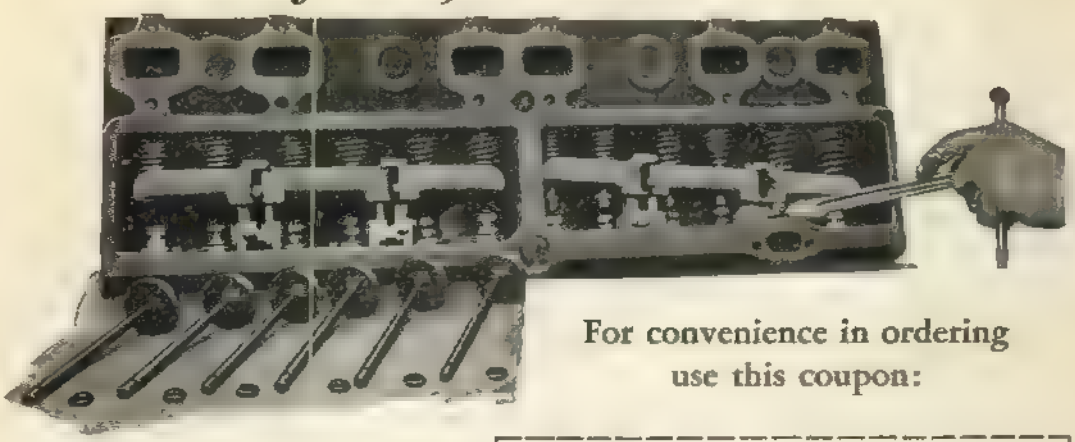
OAKLAND MOTOR CAR CO.; PONTIAC, MICHIGAN

Pays for Itself in the first 5 to 8 jobs!



This Fleming Multiple Valve Lifter will lift a bank of springs in less than 60 seconds with one turn of the wrist.

The most popular and fastest selling of all shop tools is this remarkable Fleming Multiple Valve Lifter. And no wonder!

Imagine being able to lift four to eight valve springs *at a time* with a single turn of the wrist, without the slightest danger of pinching your fingers or barking your knuckles. Imagine being able to remove valves and pins with both hands free, being able to leave the springs compressed while you grind the valves and remove the carbon. Then slip valves and p ns back in place, *another turn of the wrist* and the job is complete: Can you beat it?

Flat rates mean profit only when you get your costs down. You can see how the Fleming Multiple Valve Lifter will cut costs, and cut 'em plenty.

That coupon will bring as many as you can use. Mail it today.

April Production—

the largest in Oakland's Entire History

DURING April more than 20,000 Oakland and Pontiac Sixes were produced to meet the increasing demand that is literally sweeping the nation.

This is the largest month in Oakland's entire history. It follows on the heels of the company's biggest March—more than 16,000 cars.

These figures carry a message for every automobile dealer in America. They indicate the vast buying enthusiasm which the New and Finer Pontiac Six and the Greater Oakland Six have created. But even more important, they prove that Oakland makes deliveries to dealers when buying is at its height.

Oakland's complete factory cooperation explains why Oakland-Pontiac dealers are winning universal success. It shows why dealers can make such statements of net profits as $70,000 in one city of 150,000 people—$55,000 in another of 52,000—$100,000 in a third of 400,000—and so on almost without end.

Why not learn how you can join an organization whose dealers win such success? Simply fill in and mail the coupon today!

Oakland Six, $1025 to $1295. Pontiac Six, $775 to $975. Pontiac Six Commercial Cars, $585 to $770. All prices at factory. Delivered prices include minimum handling charges. Easy to pay on the General Motors Time Payment Plan.

OLDSMOBILE SIX
PRODUCT OF GENERAL MOTORS

This advertisement appeared in the Saturday Evening Post and many other magazines.

Oldsmobile's greatest selling strength lies in the fact that it deals with known values.

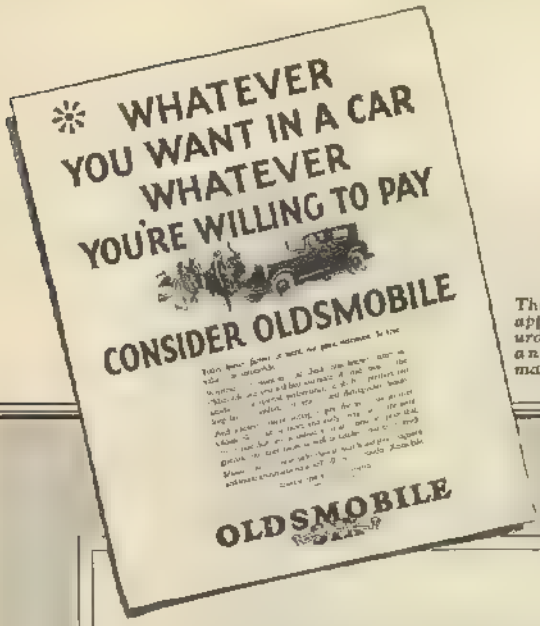
No unproved features cloud the issue, no elements of whose advantage prospects must be convinced by lengthy arguments.

Here is a clear-cut value.

And the important thing is that Oldsmobile's policy stands pledged to this principle.

OLDSMOBILE SIX

PRODUCT OF GENERAL MOTORS



This advertisement appeared in the Saturday Evening Post, and many other magazines.

Oldsmobile offers a value eagerly seized upon by a public whose increasing tendency is to buy automobiles as they buy other things . . . . singling out the cars that suit their tastes and meet their needs . . . then comparing prices . . . and *selecting*.

Every day a notably increasing number evidently say to themselves, "Why accept less?—to save so little; why pay more?—when Oldsmobile gives me so much!"

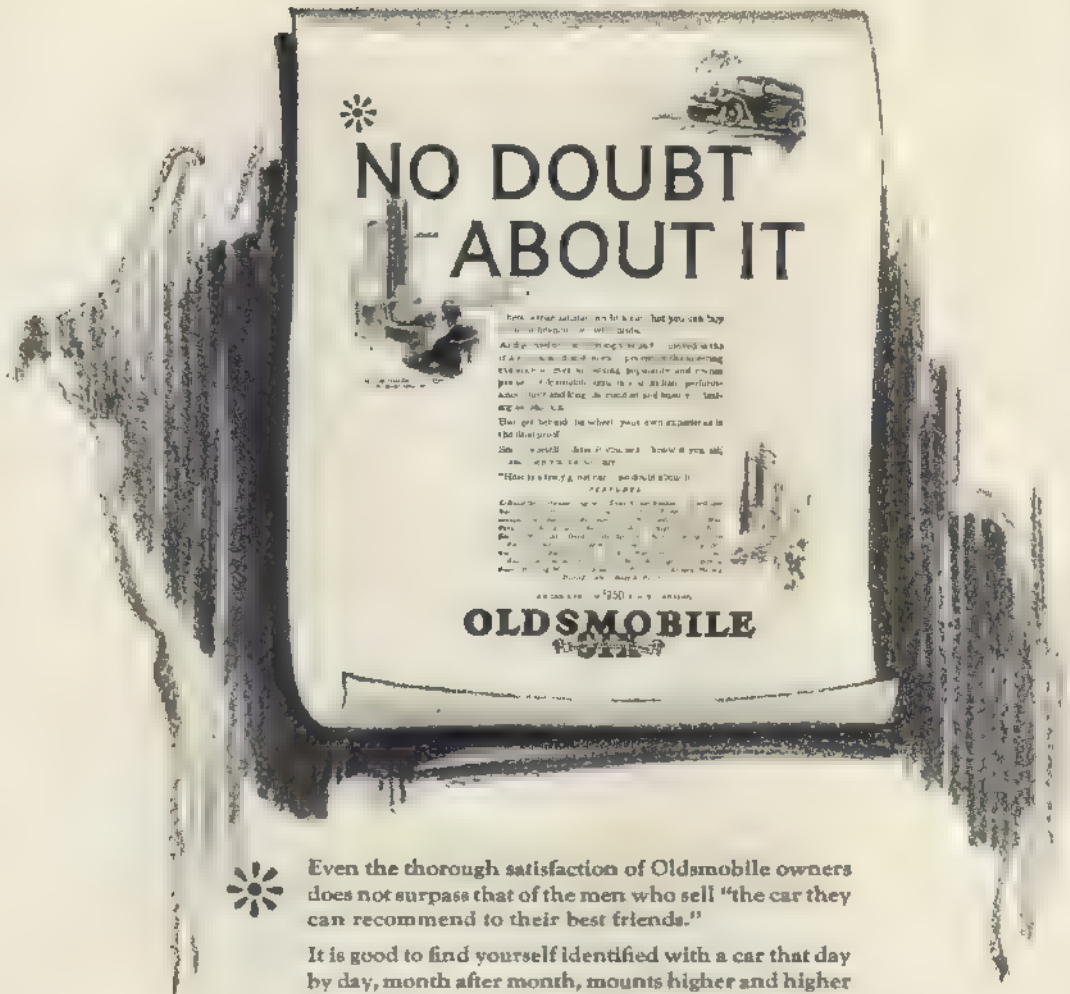
Much indeed . . . . crankcase ventilation, oil filter, dual air cleaning (only three to four oil changes a year), harmonic balancer, two-way cooling and a score of other known factors of modern motor car merit, including Fisher Bodies of surpassing beauty and possessed of those luxuries and conveniences that mean so much!

Of course Oldsmobile is constantly growing in the preference of those who *select*. . . . who *choose by comparison*. Why shouldn't it, presenting such a value!

OLDSMOBILE

Product of General Motors

This advertisement appears in the Saturday Evening Post and other magazines.



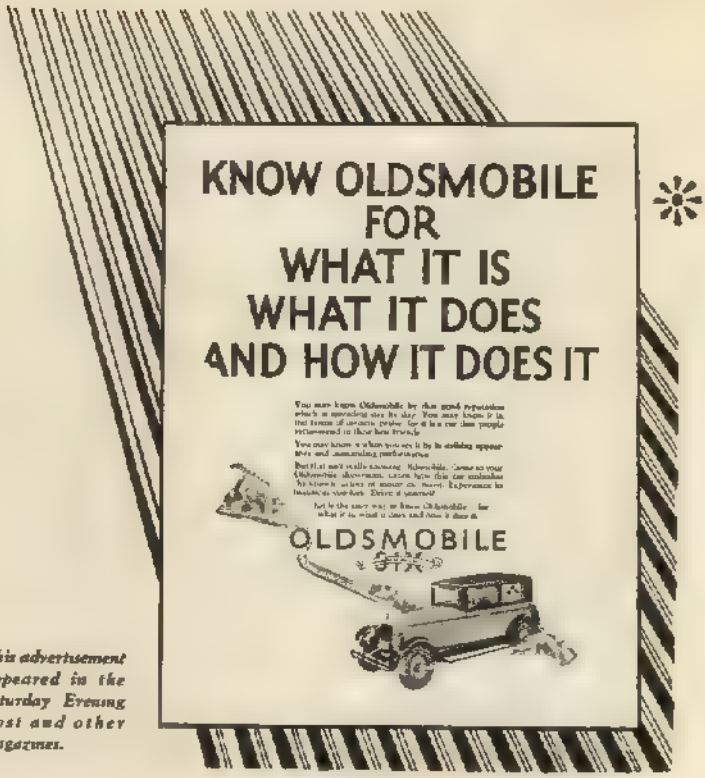
Even the thorough satisfaction of Oldsmobile owners does not surpass that of the men who sell "the car they can recommend to their best friends."

It is good to find yourself identified with a car that day by day, month after month, mounts higher and higher in public favor . . . wins more and more enthusiastic owner praise . . . grows ever more widely accepted as the preeminent value in the thousand dollar class.

With an automobile embodying the known factors of motor car merit; with sales the greatest in Oldsmobile history and still growing; and with a factory policy pledged to progress assuring a sound future—Oldsmobile dealers occupy a position outstanding in the automobile trade . . . no doubt about it!

OLDSMOBILE

Product of GENERAL MOTORS



This advertisement appeared in the Saturday Evening Post and other magazines.

* *See it—*
Drive it—
Know it—

That is the message that Oldsmobile advertising has kept driving home all Spring.

And they come to Oldsmobile showrooms, this public that wants value—and they find value in every detail of

What it is—
What it does—
and how it does it!

OLDSMOBILE

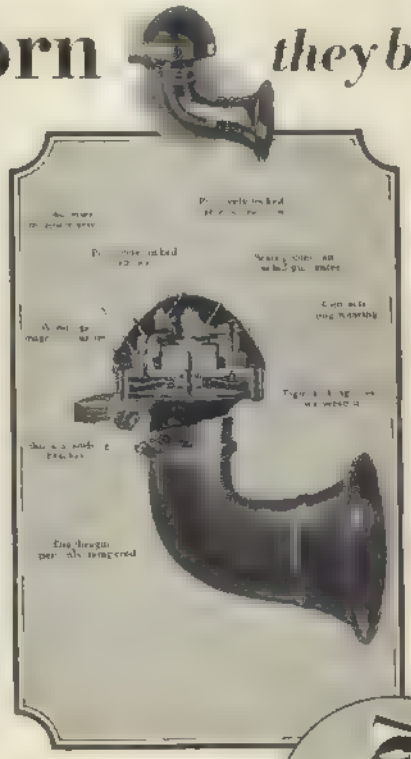
PRODUCT OF GENERAL MOTORS

This advertisement appeared in the Saturday Evening Post and other magazines

*Now lifted bodily from its proper price class and placed far down the scale of prices, Oldsmobile Six enters a new and wider market—a market with almost no limit to sales.

OLDSMOBILE
SIX
PRODUCT OF GENERAL MOTORS

Gas, they buy every week . . . Oil, they need twice a month— But a horn they buy only once!



YOU could *afford* to be satisfied with a small profit per gallon on items like gas and oil. For every customer is buying such necessities all the time. The "repeat" business is steady. The turnover is rapid.

But when you sell horns, it's a different proposition. You never sell the same customer a new horn every week or every month. "Repeats" don't figure in horn sales. Therefore it's good business to push the horn you make the most money on, per sale.

Now on a cheap horn, your profit is only $2.50 or $3.00. While on the best horn you can sell him—the Original-Bosch horn—you earn triple profits—about $10. or more (depending on quantities).

In spite of low-priced, low-quality imitators, sales of this Original-Bosch horn are steadily increasing. Dealers, disgusted with complaints and come-backs of cheap horns, have rallied to Original-Bosch.

Because they know that this horn will never get out of order, never need attention, never fail the driver in an emergency. They find their customers perfectly willing to pay the extra price, when they learn that the Original-Bosch horn will actually outlast the life of the car itself! And dealers feel it is good business to earn the triple profits which the Original-Bosch horn alone makes possible.

Write for triple profits plan

If you, too, want to earn triple profits, identify your store with the best, and render a real service to your customers, write today for full information about the Original Bosch horn plan which offers a larger discount to dealers and enables you to carry this horn without loading yourself up. We will also send you our new folder "A horn that increases the speed of your car," containing a striking new sales message that makes it easier to sell Original-Bosch horns.

The Original Bosch

ROBERT BOSCH MAGNETO CO., Inc.

No connection whatsoever with the American Bosch Magnete Corporation

The full name Robert Bosch and the trademarks appear on all Original-Bosch products as your guarantee of Original Bosch quality as known the world over since 1887

ROBERT BOSCH MAGNETO CO., Inc.
111C West 64th Street, N. Y.

Please send copy of new folder "A horn that increases the speed of your car" and [illegible] showing how I can make triple profits from the sale of Original-Bosch horns.

Address ...

ALL WINTER LONG!

There's nice, profitable business in these Peerless replacements. For a freeze-up generally means a new radiator—and every smash-up means new fenders, etc.

So the Peerless dealer never gets a chance to hibernate, for business is always at hand to keep him busy.

If you are not handling this wonderful line of profit-makers, ask your jobber's salesman. He'll tell you that every one of them is a money-maker and fast mover.

PEERLESS TUBULAR RADIATOR

Exact duplicate of Ford, except that it has pure copper tubes and extra special side supports. Sells for same price.

NEW WING CAP No. 61

High nickel finish. Packed in separate boxes and in beautiful counter or window display carton. Priced for quick sale

PEERLESS PRODUCTS

The CORCORAN Mfg. Co.
Dept. 36 Norwood Cincinnati, Ohio

Auburn Introduces New Roadster Models

The Auburn Automobile Co. announces the introduction of its new line of roadster models, which follow closely the designs of last year's models. The 8-88 has the same sweeping line over the hood and following the body and rear deck. An extra wheel and tire is carried on the right running board. The top is of light fine quality whipcord material. The rear deck seat is approached from a convenient door.

The 8-88 roadster is equipped with a rear trunk carrier. It is offered in two colors, Beaver Brown and Fawn and Pheasant Green and Ambato Green. Upholstering is hand buffed Spanish leather.

The extra tire on the 8-70 is carried on the rear. The color treatment is Moleskin and Bambaline Blue with Rolls-Royce blue lower body. The 6-60 is done in Russian brown upper and Moleskin lower body.

Hudson Has New Color Combinations

Hudson Super Six shipments of custom built 7-passenger sedan and 5-passenger broughams are now in new color combinations. Upper body on both models is black. Lower on the sedan is blue light and on the brougham Old Burgundy. Moldings of both models are black, blue light and French gray striping being used on the sedans and Castilian and Casino red on the brougham.

Olds Uses Cadmium

Cadmium is now being used for plating all external bolts, nuts, washers and screws on Oldsmobile cars. Cadmium, a malleable white ductile metal derived from greenockite, a comparatively rare mineral, is corrosion-proof and being fairly soft does not crack when bolts or screws are tightened by hard, sharp tools.

Pierce Announces New 80 Club Sedan

A close coupled five-passenger four-door club sedan listing at $3,300 has been added to model 80 it is announced by the Pierce-Arrow Motor Car Co. A built-in trunk, bumpers, front and rear, spare tire, shock absorbers, automatic windshield wiper, Winterfront and rear vision mirror are included in the equipment. Finish is in optional pyroxylin colors.

Price reductions of from $355 to $500 on four models of the series "80" chassis are also announced by the company as follows:

Model	New Price	Old Price
Standard sedan	$2,895	$3,250
Two-door brougham	2,495	2,995
4-passenger coupe	3,250	3,695
Runabout	2,495	2,895

With the present price reductions these models are now the lowest priced cars ever marketed by Pierce-Arrow Motor Car Co.

Moon Cuts Prices on Diana Models

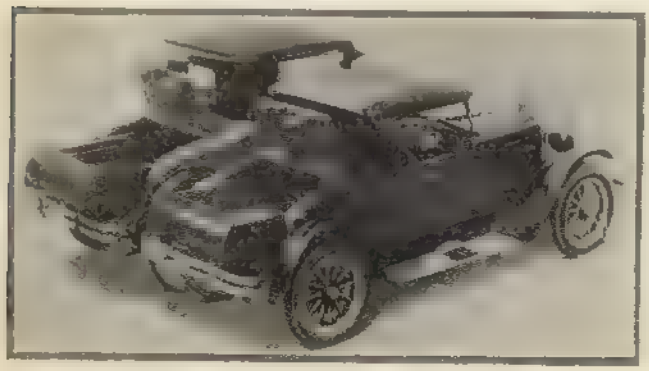
Substantial price reductions on Diana models have been announced by the Moon Motors Corporation, as follows:—

	Old Price	New Price
5-pass. phaeton	$1 775	$1,595
5-pass. roadster	1,795	1,645
De luxe brougham	1,995	1,695
Palm Beach roadster	1,995	1,795
Cabriolet roadster	2,085	1,985
De luxe sedan	2,195	1,995

Increased production is given as the reason for the reduction, together with the fact the initial cost of introducing the Diana has been absorbed.

Sliding Drawers Added to Two Dodge Models

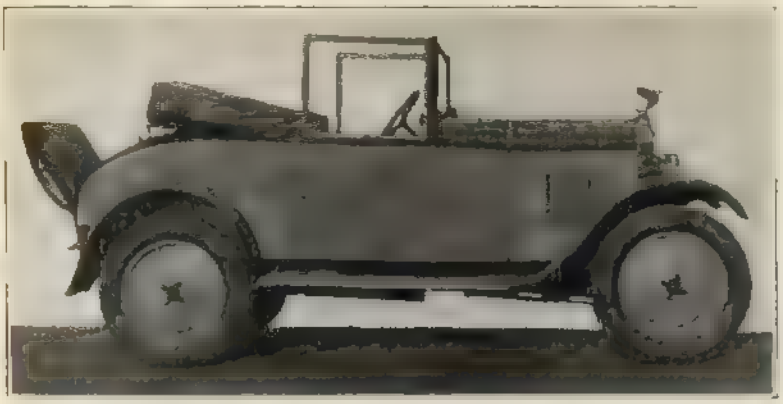
Announcement is made by Dodge Bros., Inc., that standard coupe and roadster models can be purchased at $100 additional cost equipped with sliding drawer, permitting adaption for commercial uses. The telescope drawer, made of steel, is built into the rear and is adjustable to three locking positions. When not in use it can be closed and the coupe and roadster maintain their usual appearance. The tire carrier is mounted on the left running board forward of the door when the sliding drawer is provided.



Sliding drawers on Dodge models

Peugeot Introduces Car for Sale in U. S.

The first foreign small car to invade this country on a large scale will be the Peugeot under plans formulated by the recently organized Peugeot American Corp. which has opened offices and salesrooms at 171 W. Fifty-seventh St., New York City. American capital is back of the project.



Model of small Peugeot being sold in this country

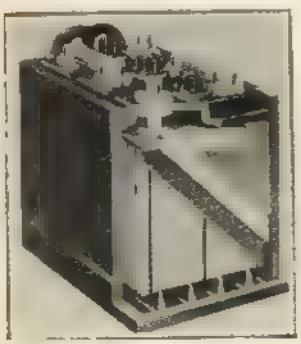
The Peugeot company of Paris has developed a new type for the American market. It is being sold here in two models, at $1,085 delivered in New York for the convertible cabriolet and $1,050 for the convertible touring car. The engine is rated at 7 hp. and has four cylinders, 60x90 millimeters, wheelbase is 89½ in. and tread 38 in. The car develops 50 to 55 m.p.h. and does 45 miles to the gallon.

Stressing the sporty character of the cars, the company is importing them unpainted, allowing the purchaser to choose his own color combination. A fabric body option is provided on the touring car. American wheels and tires, 27 x 4.40, are provided, but the remainder of the car is entirely made in France. Yves De Villers is president of the Peugeot American Corp. J. W. Hessian is sales manager.

Rubber Ribbed Separators Used by Prest-O-Lite

A patented feature, claimed to be unusually successful in lengthening the life and increasing the efficiency of storage batteries is announced by the Prest-O-Lite Company, Inc., of Indianapolis.

This new improvement has been used for the past three years in Prest-O-Lite batteries installed as standard equipment on Packard motor cars. It consists of the use of sturdy, rubber-ribbed separators between the battery plates. Batteries containing this patented feature are now on the market in the new Prest-O-Lite "Rubberib" storage battery for all makes of cars.



Considerable of all battery troubles in the past have been due to the fragile nature of the separators, which wore out before the plates, because no one had found a satisfactory way to reinforce a wood separator so as to withstand the friction which may result from two plates rubbing against a separator, according to statements being made by the Prest-O-Lite company.

In the past, it is said, efforts have been made to overcome this difficulty, but until the Prest-O-Lite Rubberib was invented no one had succeeded in so strengthening a wood separator as to make it possible for the separator to last as long as the plates.

The new Rubberib battery has separators of candled Port Orford cedar. These separators are specially treated by a secret Prest-O-Lite process to increase their porosity and durability. They are then strengthened by triple reinforcements of hard, vulcanized rubber at the points which take the wear.

The manufacturers state that batteries of this new construction have been in use for three years without the knowledge of the public, and now at the close of this period of successful use, Prest-O-Lite announces Rubberib batteries are available for all makes of cars.

The New and Finer

PONTIAC SIX

SEDAN $775

Again the Oakland-Pontiac Double-Profit Franchise rises to new high value—this time with the New and Finer Pontiac Six at new low prices. Its bodies by Fisher are long, low and rakish in appearance. New combinations of Duco emphasize their arresting style. Narrowed windshield pillars, deeper radiators and larger, heavier crown fenders conform with the vogue created by the finest custom-built cars of the day . . . Two entirely new body types—a Sport Roadster and a 4-passenger Sport Cabriolet—complete the Pontiac line . . . Engineering refinements include such fine car features as foot-controlled tilting-beam headlights . . . Lower prices result from economies made possible by Pontiac's record-breaking first year sales and the increased production of huge new factories . . . No other combination of cars holds forth the profit-making possibilities now offered by the New and Finer Pontiac Six and the Greater Oakland Six. Generous discounts and liberal cooperation, plus these two fast-selling sixes, make the Double-Profit Franchise one of the most desirable in the entire industry. If you are interested in selling the New and Finer Pontiac Six and the Greater Oakland Six write Department B for full information. Priority of application counts, so write or wire today!

DeLuxe Screen Delivery	760

Oakland Six, $1025 to $1295. All prices at factory. Easy to pay on the liberal General Motors Time Payment Plan.

All during 1926, the Pontiac Six piled up record after record, amazing the industry with its spectacular production and sales. No other new make of car ever took the nation so completely by storm.

Yet this electrifying success was achieved with the original Pontiac Six. And the original Pontiac Six sold for $825.

Now the New and Finer Pontiac Six embraces even greater beauty and even more mechanical improvements. Now it sells at New Low Prices.

And that reduction in prices alone has increased the number of possible Pontiac Six buyers by 250,000—a figure based on the most accurate and scientifically developed data available.

What this means to holders of the Oakland-Pontiac Double-Profit Franchise is crystal clear. It means that in addition to all the people who could afford to buy a Pontiac Six at the old price—in addition to all the buyers of the Greater Oakland Six—in addition to hundreds of thousands who are attracted by the new beauty, new body types and new refinements in the Pontiac—there are now a quarter of a million more people made prospects for the Pontiac Six by its New Low Price.

If you have watched the ever-increasing value of the Double-Profit Franchise, now you must be interested to the point of action. Never before was the future brighter for Oakland-Pontiac dealers. And if you want to share that future, mail the coupon today.

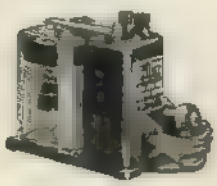
Keep radio profits up

by concentrating on lines that are selling now

The New Balkite Charger

MODEL J. Has two charging rates: A low trickle charge rate and a high rate for rapid charging and heavy duty use. Can thus be used either as a trickle or as a high rate charger and combines their advantages. Noiseless. Large water capacity. Visible electrolyte level. Rates: with 6-volt battery, 2.5 and .5 amperes; with 4-volt battery, .8 and .2 ampere. Special model for 25-40 cycles with 1.5 amperes high rate. Price $19.50. West of Rockies $20. (In Canada $27.50.



Balkite Trickle Charger

MODEL K. For those who require a charger of limited capacity only. Can be left on continuous or trickle charge thus automatically keeping the battery at full power. Converts the "A" battery into a light socket "A" power supply. Charging rate about .5 ampere. Over 350,000 in use. Price $10. West of Rockies $10.50. (In Canada $15.)

All Balkite Radio Power Units operate from 110-120 volt AC current with models for both 60 and 50 cycles. Also a 25-40 cycle model for the Balkite Charger.

Keeping your radio department operating at a satisfactory profit at this time of year is a matter of selecting the correct lines to push. Scatter your efforts on all lines, many of which are unsalable at this season, and your sales will drop. Concentrate them on the few lines that are good sellers now and they will keep at the maximum.

Balkite is one of these lines. In fact Balkite sales after the first of the year are greater each season than before the first of the year. When most lines are falling off, the Balkite season is just beginning. This is logical, for every purchaser of a radio set the early part of the season is now a Balkite prospect.

Balkite is the standard line in the radio power field. It is consistently advertised. The profit you make on it is clean, for every Balkite unit is a permanent piece of equipment, with nothing to wear out or replace. Get behind the line now, and get your share of Balkite volume and profit.

FANSTEEL PRODUCTS COMPANY, Inc.
North Chicago, Illinois

FANSTEEL
Balkite
Radio Power Units

Three New Balkite "B"s

Balkite "B" eliminates "B" batteries and supplies "B" current from the light socket. Noiseless. Permanent. Employs no tubes and requires no replacements. Three new models. The new popular priced Balkite "B"-W at $27.50 for sets of 5 tubes or less requiring 67 to 90 volts. Balkite "B"-X (illustrated), for sets of 8 tubes or less; capacity 30 milliamperes at 135 volts—$42. Balkite "B"-Y, for any radio set; capacity 40 milliamperes at 150 volts—$69. (In Canada "B"-W $39; "B"-X $59.50 "B"-Y $96.)

Balkite Combination

When connected to the "A" battery this new Balkite Combination Radio Unit supplies automatic power to both "A" and "B" circuits. Controlled by the filament switch on your set. Entirely automatic in operation. Can be put either near the set or in a remote location. Will serve any set now using either 4 or 6-volt "A" batteries and requiring not more than 30 milliamperes at 135 volts of "B" current—practically all sets of up to 8 tubes. Price $59.50. (In Canada $83.)

THE BALKITE LINE OF ELECTROLYTIC DEVICES IS PROTECTED BY EDGAR W. ENGLE U. S. REISSUE PATENT NO. 18,438; DATED OCT. 18, 1932

Do you buy discounts or merchandise

LARGE *discounts* do not always mean large *profits;* in fact, generally just the reverse is true.

In all too many cases, where merchandise is unknown to the consumer, big discounts are simply a lure to fill your shelves with slow-moving merchandise.

Moto Meter products, nationally advertised and nationally known, show liberal profits with a speedy turnover and offer the perfect combination.

The fact that Boyce Moto Meters are today on the radiator caps of more than 10,000,000 cars, reflects the wisdom of dealers who buy *worthwhile merchandise,* rather than *discounts.*

Plan to have

this remarkable tire chain success

yourself

LAST season scores of dealers discovered greater profits in tire chains. They grew more and more enthusiastic over these five unmatched sales advantages in Protex Chains:

Five New Results

1. Longer wear.
2. Noiseless.
3. Can't cut tread.
4. Better traction, less wheel spinning
5. No skidding, eliminates sideskid entirely.

Did dealers sell these new-type tire chains? Motorists bought Protex on sight. It was the chain they had been waiting for. Dealers showered wholesalers with orders . . . and wholesalers swamped us. There was never any let-up in the demand for Protex.

Here's where the greater profit comes in. Protex Chains are marketed on a basis that pays you a far larger net profit, yet are priced in line with the market. Dealers sold *more* chains . . . and made *more profit per sale.*

During the season just closed we couldn't fill all orders. Now we are turning out tire chains day and night. Getting ready for you and hundreds of other dealers next season.

It isn't too early to be planning next winter's profits. Here's a chain that will make them bigger than ever. Last season proved its popularity. Write for complete details now

Quick Acting Klaxon 11 Horn

Delco-Remy Corp.
Anderson, Ind.

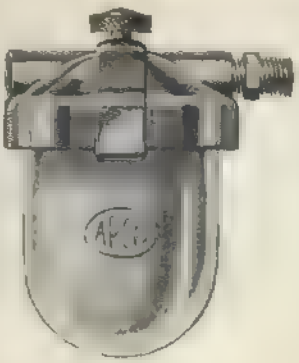
A WARNING signal of the high-frequency type at a new low price has been added to the line of the Klaxon Co. and is known as the Klaxon 11. It measures 11⅝ in. long and is finished in gloss baked enamel. It is available

in either six or 12 volt types and was developed to meet the demand for horns operating on the high frequency principle. The company claims it is exceptionally quick acting and has remarkable volume and carrying power

Apco Gasoline Filter No. 39

Apco Mfg. Co
Providence, R. I.

THE filter manufactured by the above company, is of simple and sturdy construction. Its efficiency is largely due to the fact that gasoline is made to flow from the bottom to the top of the filter thus allowing foreign particles to drop to the bottom of the chamber. The chamber is of heavily annealed glass. Accumulated water and foreign matter can

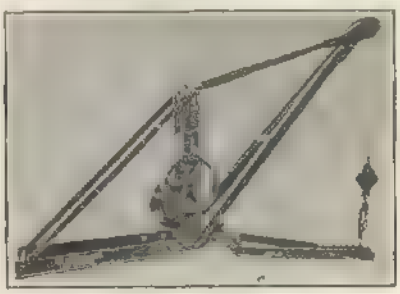


be readily seen and easily emptied by releasing a quick detachable thumb screw clamp.

Bender Electric Crane

Bender Hoist Mfg. Co.
Omaha, Neb.

THE above company is producing an electric crane operated by a 6-volt battery with a gear reduction of 288 to 1. It is said that the drain on the battery is so small that the generator



can easily keep the battery charged. The cable operates at a speed of 4 ft. per minute. It has a capacity of 4 tons and its weight with tow bar is 400 lb. It lists at $175 and a tow bar may be had for $15 extra.

Tracy Fluid Dynamometer

Metal Stamping Co
Long Island City, N. Y.

THE dynamometer is offered to service stations and fleet owners as a means of definitely determining the power output of new or overhauled engines. In construction it is smaller and

lighter than the fan or electrical dynamometer and is well adapted for general service station usage. The resistance in this machine is regulated by varying the size of the opening through which oil is pumped. The pressure thus developed is used as an indication of the power of the engine being tested. The No. 1 size, capable of handling engines up to 50 hp., costs $400. The No. 2 size, which has a maximum capacity of 115 hp., costs $650.

Blackhawk No. 2 Cabinet

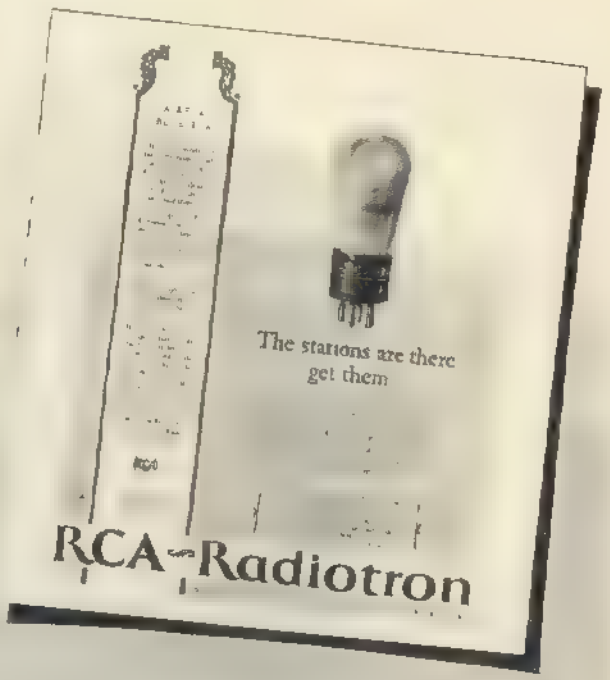
Blackhawk Mfg. Co.
Milwaukee, Wis.

ANNOUNCEMENT is made by the above company of its new No. 2 cabinet, 19¾ in. high, 16½ in. wide and 8¾ in. deep It contains 88 tools and lists at $50.

Master Brake Tester

Master Mfg. & Sales Corp.
Chicago, Ill.

A NEW brake tester, known as the Master, is being produced by the above company. It consists of a pedestal and cylinder containing a spring which can be compressed to show desired weights. Directions for working the test are to jack up the car, turn wheel so rim bolt or notch in rim of disk wheel is parallel with center of hub and at rear Press brake pedal down (pedal is then held down by means of holder furnished). Place brake tester under rim ug, compressing spring by operating ratchet handle, tightening or loosening brake as needed until desired weight is shown. Rear brakes should register from 250 to 300 lb and front brakes about 50 lb. less. Be sure rear brakes register alike and also front brakes register alike



RCA advertising each month of the year stands out vividly in color. Its story of quality is interesting and convincing. Its results show in profitable year-round turnover of dealers' stocks.

Better manufacturing methods—better test methods • longer experience • pioneering. *Result*—RCA Radiotrons are better vacuum tubes. And better tubes backed by great year-round advertising naturally win the biggest sales.

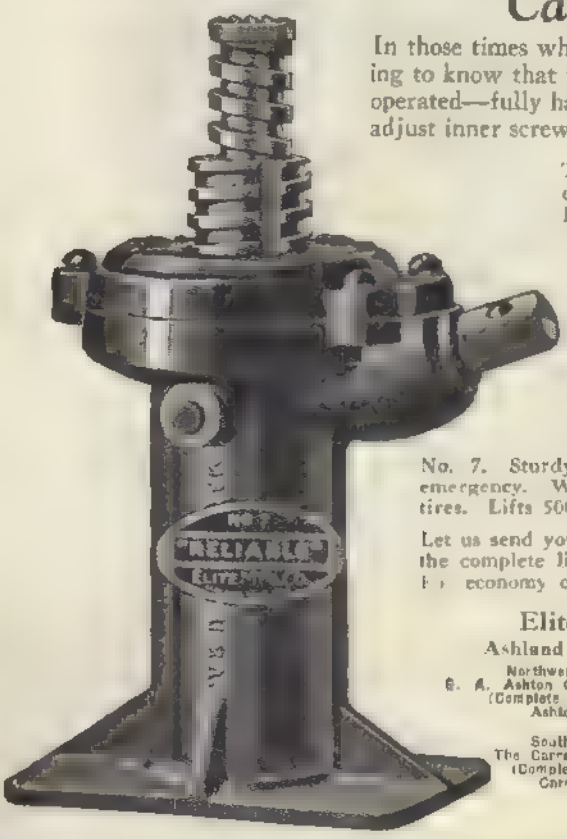
The Original Balloon Tire Jacks a Complete Line

No. 14—1 ton capacity
9½" lift
No. 15—2 tons capacity
10¼" lift
No. 16—2½ tons capacity
9¼" lift

All Reliable Jacks are Red but all Red Jacks are not Reliables

Be prepared for the emergency. Carry a Reliable!

In those times when minutes count, it is a gratifying feeling to know that your tool box carries a Reliable. Easily operated—fully handle controlled—no fussing by hand to adjust inner screw.



There are many manufacturers of fine cars who factory-equip their product with Reliables. There are others who overlook this point. It is a real service to the owner of a car that carries some weakling jack, to call his attention to the vital importance of replacing it with a Reliable.

It is profitable business for the dealer to display Reliables prominently on his counter.

The illustration shows one of our leaders No. 7. Sturdy and honestly built, it is equal to any emergency. Works equally well on balloon or regular tires. Lifts 5000 lbs. 10¼". Long handle control.

Let us send you our catalog, which will acquaint you with the complete line. A jack for Every Purse and Purpose. For economy carry a single line.

L. A. 15. High Pressure 3500 lbs. Fits any fitting. Capacity 15 lbs. lubricant.

. . . More Jobs in Less Time

COMPETITION is too keen nowadays to waste any time trying to make a profit with anything less than the very speediest labor-saving equipment. That's why Larkin Thuro Lubricators are so popular. They easily "eat up" lubricating jobs. Made in various sizes with a pressure at the bearing ranging from 2500 lbs. to 3500 lbs. Larkin Thuro Lubricators find little resistance in opening up "frozen" bearings. And because they are all one-man operated, adaptable to any type of fitting, easily portable and unaffected by climatic changes, it's a ten to one bet you'll find Larkin Thuro equipment in use wherever you see a busy garage or service station.

ASK YOUR JOBBER

to show you the various Larkin-Thuro Lubricators, as well as the complete line of Larkin-Thuro Products made and sold for repair and replacement only on cars and trucks equipped with Alemite and Zerk Systems. If your jobber can't serve you, send us his name and we'll see you're taken care of.

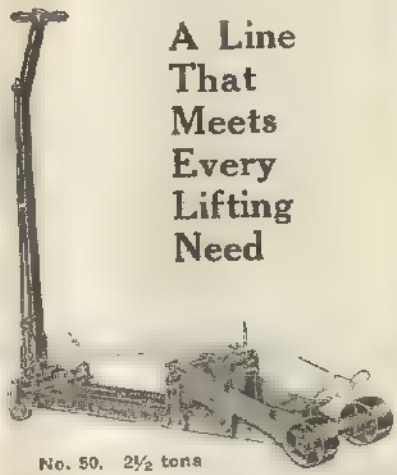
When a Fellow Needs a Good Jack

In the crowded garage a Reliable Hydraulic Jack proves itself a saver of time, temper and labor and a money-making asset to the shop.

A Line That Meets Every Lifting Need



No. 50. 2½ tons

Reliable Jacks are made in a comprehensive variety of sizes and types to cover every possible lifting need. Here's a husky No. 50, the Hydraulic hoister that has banned backaches and "busted" bones from the business of servicing motor buggies. Low starting point: 4½". ELEVEN INCH LIFT. One inch of handle movement will raise the car. Release valve on handle. The load is always under control. No ratchets, toggles or chains to fuss with. Roller bearings make heavy loads ride easily. Send for our catalog and learn more about it. As a means of speeding up your work and making the shop show more profits, RELIABLE No. 50 is invaluable. **2½ ton capacity.**

Bus and Truck Fleet operators—Write for specifications of our new Nos. 70 and 71 Hydraulics—For speeding up servicing of trucks and busses. **7 ton capacity.**

Just a Few of the Other Leaders in Our Line

No. 14
Latest addition to our line. 1-ton capacity

No. 15
A remarkably popular balloon tire jack. Long handle control. Lifts 2 tons 10 inches. Wonderful value.

No 16
A new balloon jack 3000 lb. capacity. Lifts 9¼".

No. 7
A powerful extra quality jack. Low clearance Lifts to 17 inches. Long handle control 5,000 lbs. capacity. Money cannot buy a better jack

RELIABLE BALLOON TIRE JACKS

Chassis Wear is Your Profit!

There's an average of sixteen bolts and eighteen bushings in every chassis, a total of thirty-four of the fastest wearing parts in the car—thirty-four opportunities for profit. Multiply thirty-four by the millions of cars on the road and you can picture for yourself the profit opportunities in Chassis Bolt and Bushing renewal.

Every wobbly wheel and every chassis rattle is evidence of wear and the need for Bolt and Bushing renewal. You can make these wobbles and rattles pay you a profit by telling the car owner about his wobbly wheels, which he can't see but others can. Explain to him why they wobble, why worn Bolts and Bushings cause 95% of the rattles in his car, and you'll find your shop kept busy with Bolt and Bushing renewals on which there is no "come-back" or complaint.

To profit most you'll need the B/P Spring Bolt Jack and Bushing Tool, which cuts Spring Bolt installation in half. Then, in fairness to both the owner and yourself, renew with Blue Print Bolts and Bushings, which are made to the car manufacturers blue prints and are identical with original equipment in fit, quality and service.

"B/P" Spring Bolt Jack and Bushing Tool

—will cut Spring Bolt and Bushing installation time and labor in half. With them you can make Bolt and Bushing renewals at less cost to the owner and more profit to yourself.

The REO FLYING CLOUD Sedan

the finest, fastest model of America's longest lasting car

Four hydraulic shock absorbers—As indication of the completeness and expensiveness of the equipment furnished, the Reo FLYING CLOUD is regularly equipped with four hydraulic shock absorbers, of a type heretofore found only on the most expensive cars.

Newly designed hydraulic four-wheel brakes—Internal, not external—providing Equally effective braking under all weather conditions, wet or dry, hot or cold. An effective braking in reverse as in going forward. These brakes are an exclusive feature of the Reo FLYING CLOUD.

Finger Tip Control simple, single disc clutch, engaging easily, quietly and without jerking.

Bodies, in the Continental manner, exclusive Flying Cloud design, clear vision, lowered height.

Torsion Vibration Absorber.

Seven-bearing Crankshaft

Interiors tailored in an entirely new treatment!

Speed like a storm cloud before a hurricane.

Quickly adjustable front seat.

40% increase in power.

Dynamically balanced wheels.

Front and rear bumpers.

Longer Wheelbase Air cleaner functioning freely at all speeds.

Finger Tip Steering, modern cam and lever type.

Tornado-like acceleration.

New model oil filter.

Double filament controlled beam lights, non-glare lenses.

Shoalwater Blue and other colors.

Ceiling pattern fittings.

Motor, full rubber floated at *four* suspension points.

Gasoline gauge on the instrument board

Parking Brake, on transmission shaft.

Automatic, positive action, crankcase ventilator.

Thermostatic heat control insuring proper driving heat under all conditions.

Thermostatically controlled generator preventing battery overcharging.

Among many other items of equipment and features of construction are. Single piece windshield opening outward, plate glass windows, vanity case and smoking set, rear traffic signal, transmission lock, automatic windshield cleaner, cowl ventilator, parking lights, genuine full balloon tires, integral sun visor, rear-view mirror.

A new Splitdorf *Water-proof* Magneto built for trouble-free, never-miss ignition

This new instrument has been developed to meet the need for a magneto truly water-proof and absolutely dependable under all conditions of service. Splitdorf Model "B" Magneto will supply unfailing, powerful sparks that will keep a motor running through a drenching rain and maintain service in all weathers.

Splitdorf Model "B" Magneto is a superior instrument operating on the inductor principle. At all engine speeds sparks are strong and hot. The exceptionally strong, fuzzy spark improves pick-up, increases speed and adds power.

Splitdorf Model "B" Magneto is made for two, four and six cylinder engines. An exclusive advantage is the provision of both 20 and 30 degree timing range slots. Contact points can be adjusted conveniently. The advance lever may be set right, left or vertical. Splitdorf Electrical Company, 392 High Street, Newark, N. J. *Subsidiary of Splitdorf-Bethlehem Electrical Company.*

1. Magneto cover is fitted into grooves
2. Surfaces machined for a perfect fit
3. Distributor block cover fitted with oiled felt makes a dust-proof, water-proof seal
4. Oiled felt prevents dust and water entering breaker compartment

Studebaker Dealers
start their biggest year

STUDEBAKER — always a valuable and highly profitable franchise now enters its greatest era of dealer prosperity with the advent of the new Erskine Six—the little aristocrat of motordom.

Studebaker dealers now have a price range from $945 to $2245—the Erskine at $945 to $995—the Studebaker line at $1160 to $2245. Both lines are Studebaker designed a warrant of value and a guarantee of advanced engineering and mechanical excellence.

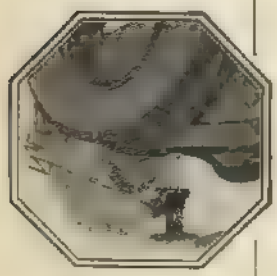
Picture the available market in your vicinity for a line of fine cars opening at the above low figure. The Erskine Six alone will open up opportunities of sales that have not been touched. Bodies by one of the world's greatest custom designers -Dietrich. Performance standards unapproached. The whole motor world admits it is the most original car in conception and development of a decade.

There is not a purse or a purpose that the combined Studebaker and Erskine lines do not fit. The values represented in both cars are supreme in the industry. Here are profits heaped on profits for you, if the franchise you want is still open. Wire for particulars.

STUDEBAKER

The New No. 525 Walker Jack was designed with one thought in mind namely to make the finest passenger car jack ever built, and one that any man would be proud to own, as a part of his car equipment.

A long turning type handle with special grips and proper leverage is used to place the jack under the car, make the lift, and withdraw the jack, while a universal joint in the end of the handle makes it easy to clear all interference, such as gas tanks, spare tires, bumpers or fenders, a very necessary feature for use on cars with Balloon Tires and low axles

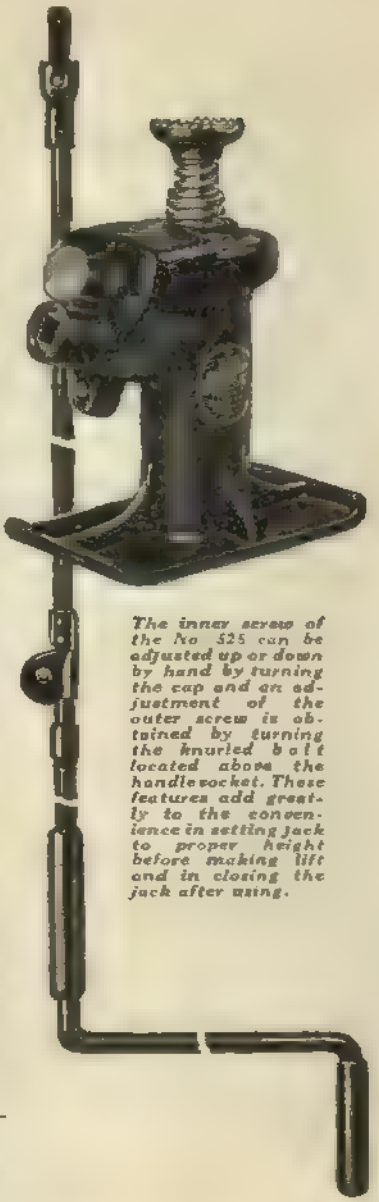


List Price $6.85

Just as surely as Balloon tires have given additional riding comfort to every user, so the new No. 525 Walker Balloon Tire Jack will relieve owners of the dread and discomfort of tire changing.... Regardless of road conditions, this jack will start low enough and raise the car high enough to put on a fully inflated spare....A jack must do this or it is a useless piece of equipment....Dealers—your customers are waiting for this jack, they need it, they're asking for it....The market is ready.... Are you?

Willard Walker

President
Walker Manufacturing Co.
Racine, Wisconsin



The inner screw of the No 525 can be adjusted up or down by hand by turning the cap and an adjustment of the outer screw is obtained by turning the knurled bolt located above the handle socket. These features add greatly to the convenience in setting jack to proper height before making lift and in closing the jack after using.

Walker Jacks

Powerful Reasons

why you can earn more profit next year

with STUDEBAKER

THE GREAT INDEPENDENT

Another big reason why The Studebaker Commander outsells the combined totals of *all* other cars in the world of equal rated horsepower is that those other cars must sell for more than *double* $1495!

Eight recent triumphs prove The Commander, now reduced to $1495, fully equipped, will out-perform all other cars selling below $2000!

. . . 5000 miles in less than 5000 minutes

. . . New York Harbor to San Francisco Bay in 77 hours 40 minutes . . . new coast-to-coast record

. . . first and second places in A. A. A. 75-mile stock car race at Atlantic City

. . . first, second and third places in A. A. A. stock car race at Charlotte speedway for cars listing below $2000 . . . 88 m. p. h.

. . . up Pikes Peak Mountain (14,000 feet elevation) in 22 minutes 47 seconds

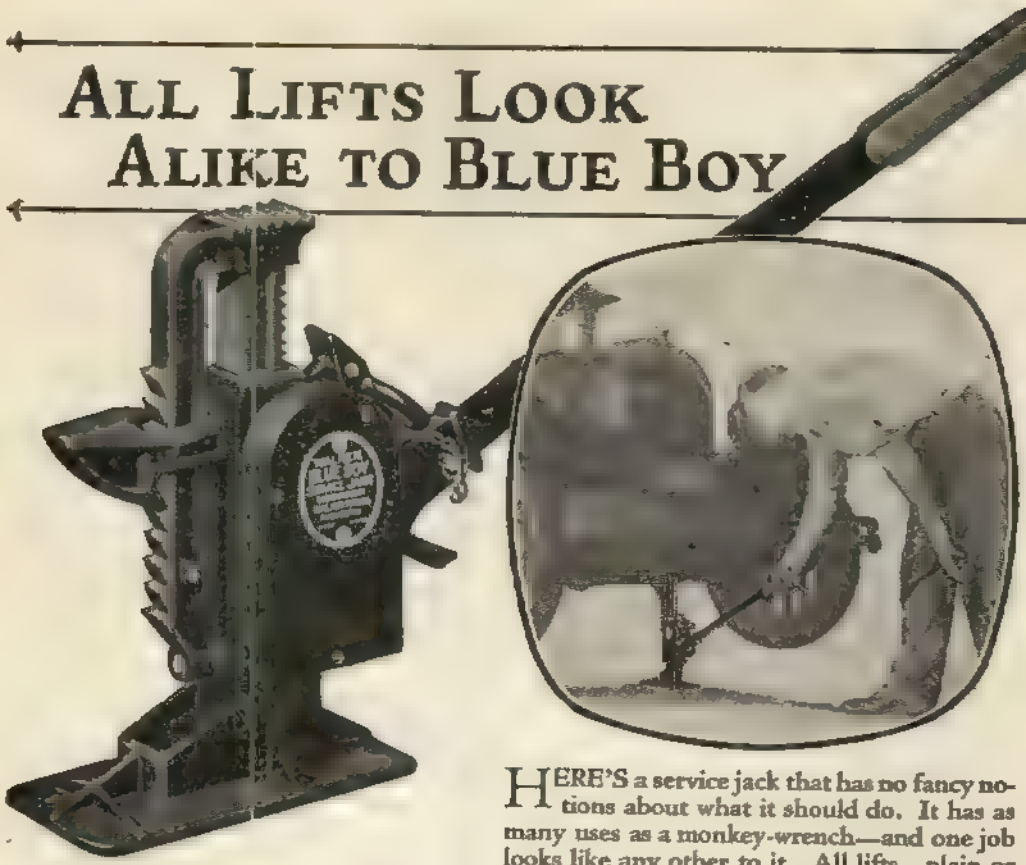
Studebaker dealers are not restricted to The Commander alone—they sell a complete line of quality Sixes—$895 to $2250, completely equipped. Write or wire today about this valuable Studebaker-Erskine franchise for *your* territory! Address Department 53, The Studebaker Corporation of America, South Bend, Indiana.

STUDEBAKER

ERSKINE SIX

Two franchises in one—offering cars from $895 to $2250

ALL LIFTS LOOK ALIKE TO BLUE BOY



BLUE BOY

FILLS THE BILL FOR THE SERVICE TRUCK

Blue Boy "fills the bill" for service truck use. It has a height of 10½ inches for snappy work on ordinary axles and springs, and the foot lift goes down to 4 inches for the low axles and balloon tires. The raise of 7 inches gives plenty of clearance and the corrugated cap prevents slipping. The two-foot handle with a comfortable wood grip helps make the lift easy and fast—and the ring handle provides an easy means of toting Blue Boy around.

HERE'S a service jack that has no fancy notions about what it should do. It has as many uses as a monkey-wrench—and one job looks like any other to it. All lifts—plain or fancy, up to 3 tons—are Blue Boy's daily diet. Consequently, Walker No. 125 Blue Boy is one of the most popular and widely used jacks for service work. In many garages every mechanic has his Blue Boy and there's always one in the service car. Wherever they are, Blue Boy lifts 'em—quickly and efficiently—wthout coaxing or fussing.

In changing tires, removing wheels, adjusting brakes, greasing wheels, installing brake lining, in all spring work and a score of other jobs Blue Boy is always ready to step in and bear the burden. Its heat-treated rack and drop-forged dogs give it the rugged strength to deliver service as long as there's lifting to be done.

Walker Blue Boy is *the* all 'round jack for every garage and service station. Ask your jobber salesman for a demonstration.

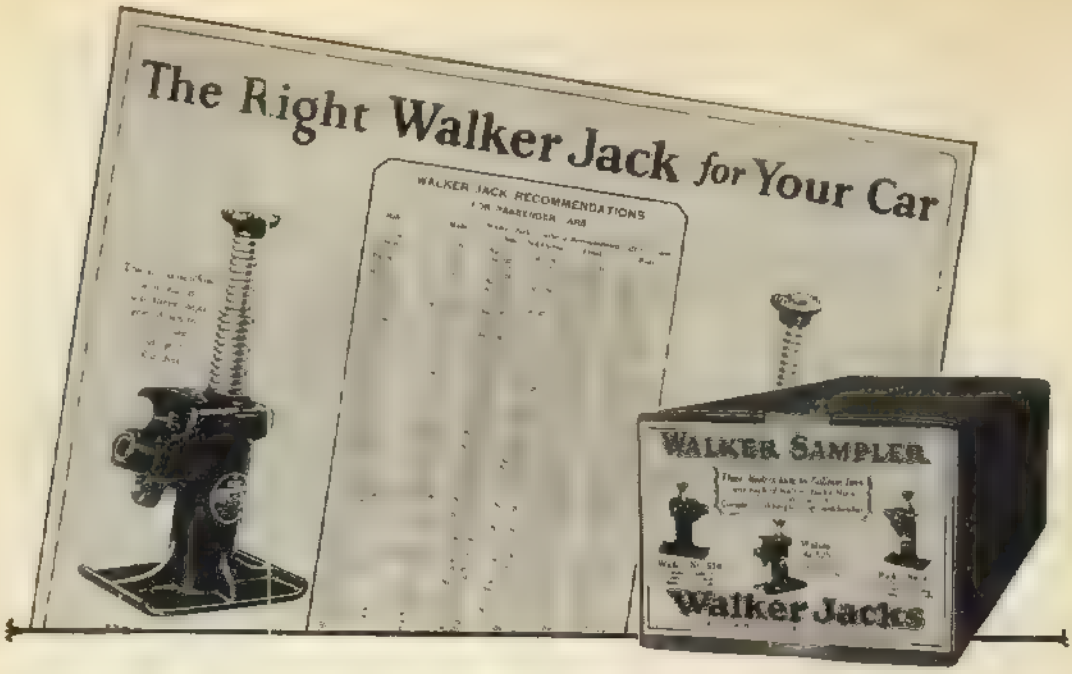
Walker Jacks

THE COMPLETE LINE



Here's What You've Needed to Sell Jacks

NOW you can sell jacks—intelligently, confidently and profitably—and with only a few dollars invested in stock. Walker offers you a Recommendation Chart that puts an end to all guess work—tells you instantly what jack to recommend for any make or model of car—tells you whether the lift should be made under axle, spring clip or spring seat, either front or rear. By displaying and using this Chart you'll sell more jacks—and you'll sell the *right* jack every time.

The Walker Recommendation Chart and a new Counter Display Card are packed in each Walker Sampler—the new package containing one each of the three recognized leading jacks for balloon tires—the Walker No. 525 for large cars, the No. 520 for cars of medium weight and the No. 515 for light cars. Each jack comes complete with long turning-type handle. Each is built on the famous *screw-within-a-screw* principle.

If you are not already selling Walker balloon tire jacks, order the Walker Sampler from your jobber today. If you are a Walker Jack dealer, write us for the Recommendation Chart.

"Dependable in Service"

The automotive department store of John O'Day, H R. Allen and A. F. Zander, in Merrill, Wisconsin

"A profitable part of our business . . ."

MERRILL is a town of 8068 population in the lumber district of northern Wisconsin. Here, in August, 1921, Allen & Zander obtained the Studebaker franchise. During the remainder of 1921 they sold four cars. Now their new car sales consistently average more than five cars a month.

"The famous Studebaker Used Car Pledge is a very valuable portion of the Studebaker franchise," declared F. D. Fritz, manager. "It makes the used car department a profitable part of our business because our Pledge-backed cars are always in demand.

"Our new car sales have practically doubled since Studebaker introduced its new Commander models—and the new Erskine Six models widen our market greatly.

"The first thought of the Studebaker Corporation seems to be, 'Our dealers must make money.' I am, and always hope to be, a Studebaker dealer."

If Studebaker is inadequately represented in your locality, or not at all, write us today regarding the sales rights for your territory. Your inquiry will be held strictly confidential. Address Department 53, Studebaker Corporation of America, South Bend, Indiana.

STUDEBAKER

ERSKINE SIX

Two franchises in one—offering cars from $895 to $2495

New York Speaks the Same Language as Paris

THE enthusiastic reception accorded the new Erskine Six in Paris and London has been repeated in New York.

The addition of the Erskine Six to the Studebaker Custom line provides Studebaker dealers with models ranging from $945 to $2245—supreme values in the modern, fine-car field.

Between August and January, 1142 inquiries were received regarding the Studebaker franchise—500 new dealers were appointed!

It is possible the Studebaker-Erskine sales-rights may be open in your territory. Wire or write today. Address Department 53, The Studebaker Corporation of America, South Bend, Indiana.

STUDEBAKER

Light a match to a fifty dollar bill and the loss would be no more than driving a few blocks on a flat Balloon tire. Low pressure tires must be changed immediately following a puncture to avoid serious damage. Thousands of dollars will be saved by the motoring public and hundreds made by dealers who show their customers that a small investment in the right jack will save ten times its cost ... 18 years spent in building quality jacks provide a background of experience which enables me to recommend to every dealer the Three Double Extension Balloon Jacks shown here as jacks that will best serve your customers and whose sales possibilities offer a splendid opportunity for profit : : :

Orland Walker

President
Walker Manufacturing Co.
Racine, Wis.

No. 520

ERSKINE SIX

Studebaker's New 2⅓ Litre Car

FOLLOWING its triumphs at the Paris Salon and the London Olympia Show, the ERSKINE SIX will be shown—for the first time in America—at the New York Automobile Show, January 8-15.

The ERSKINE SIX combines rugged American engineering with the coveted characteristics of European cars.

Economy of 25 to 30 miles to the gallon; speed of 60 miles an hour; acceleration of 5 to 25 miles per hour in 8½ seconds; power to climb an 11 per cent grade in high gear; full vision steel body, designed by Dietrich, and Studebaker quality throughout—*all at less than* $1,000! These features suggest the sales opportunity the ERSKINE SIX will offer Studebaker dealers, through whom it will be sold exclusively.

It is possible that the Studebaker-Erskine franchise may be available in your territory for 1927. A telegram or letter of inquiry will bring a prompt reply and will be held strictly confidential.—Address Dept. 53 The Studebaker Corp. of America, South Bend, Indiana.

Breaking Records for Performance and Sales *Everywhere*

5,000 miles in less than 5,000 minutes is the amazing new record of a stock Studebaker Commander—a closed job, fully equipped even to spare tire—on the Culver City Speedway in California. Nine other world records were set at the same time.

At Batavia, N. Y., in competition with five other makes on Burleigh Hill, The Commander won the slow-time test with an average speed of 5 miles per hour, winning also the fast test from standing start and the fast test from flying start. On a weight-carrying test, The Commander carried 17 men, weighing a total of 2794 pounds, up the hill in 29 seconds—starting at 35 miles an hour at the bottom and having a 22-mile speed at the top.

In a novel test at Washington, D. C., The Commander was driven up a series of 20 steep ramps or inclines—a distance of over 1500 running feet—in one minute and 29 seconds, beating its nearest competitor by five full seconds.

That Studebaker is shattering previous records for sales is shown by its position in the three leading markets of the country:—

In New York, Studebaker registrations for March are 63% above March, 1926.

In Chicago, Studebaker registrations for March show a 26% increase over March of last year.

In Detroit and Wayne County, Michigan, Studebaker registrations for March show a gain over last year of 47%—the largest percentage of gain made by any large producer, except that of one low-priced car.

Write or wire for information on the Studebaker-Erskine lines in your territory. Address Dept. 53, The Studebaker Corporation of America, South Bend, Indiana

The Latest in Balloon Tire Jacks

No. 525 Walker Jack

This is the finest passenger car jack Walker ever built—designed especially for heavy cars with balloon tires. Gear reduction and large ball bearings make lifting easy with 48 inch folding crank handle. Height 7⅛ inches. Raise 8½ inches. List price $6.85.

No. 520

These two jacks operate on the same principle as the No. 525. They are merely designed for lighter work and do not embody the gear reduction feature. The No. 520 is for medium weight cars and lists at $5.00. The No. 515 for light cars lists at $4.00.

No. 515

YOU'll never make a friend or a customer out of a man by selling him a poor jack. But sell him one of the Walker Double-Extension-Screw Jacks and you can just about bet he will become one of your life-long boosters. For people do want better jacks. And the Walker Double-Extension-Screw models—Nos. 525, 520 and 515—seem to fill the bill exactly. These are the very latest in balloon tire jacks—compact, powerful and, as everyone says, so easy to operate. Walker de-designed from start to finish, and Walker quality from base to tip of handle.

Why I say you can sell the Stutz

Another personal letter to salesmen

by

F. E. Moskovics

President

STUTZ MOTOR CAR COMPANY
OF AMERICA, Inc.
INDIANAPOLIS

I TOLD you last week that you could make money selling this car—more profit than on like cars. I gave you a few reasons—let me add here that these statements are the result of the record these cars made during the past year in the hands of owners.

I've been in the motor car business for 30 years and I know selling values, but never in all that time have I ever had a car that has so many clearly defined and easily demonstrated advantages over its competing field.

A year ago the story was "Well, let us see this new car out a year before we buy." That period of probation is past. The car has had its year of trial and the verdict is in. If you will write me I'll prove to you what that verdict is.

But get this in your mind. The Improved New Safety Stutz will give an owner more in performance, more in ease of riding, ease of handling, more in rugged stand-up, stay-putness, than any comparable car. And, most important, more features of safety and stability than any other car in the world.

Again, let me add I am prepared to prove these things for you or to you. You can sell a car like this. A car you can sincerely put your heart and soul in. Write me. I will tell you how to go about it.

STUTZ

It is a part of the Linde square deal

BUSINESS friendship, like personal friendship, is based on mutual liking and mutual trust. It begins when promises are kept. It is fostered by aiding customers in the efficient and economical use of a product.

Linde can speak with authority on the subject because Linde customers are Linde's friends. They stick to Linde because they have always had a square deal in its 19 years of life.

Linde service is one of the reasons. This means, in the first place, that when you order oxygen from Linde your order can be filled immediately. And this statement holds good anywhere in the country, for Linde has 37 plants and stocks in 107 warehouses.

In addition to a sure supply of oxygen, Linde, through its service organization, shows you how to use the oxy-acetylene process efficiently and economically.

It is part of the Linde square deal.

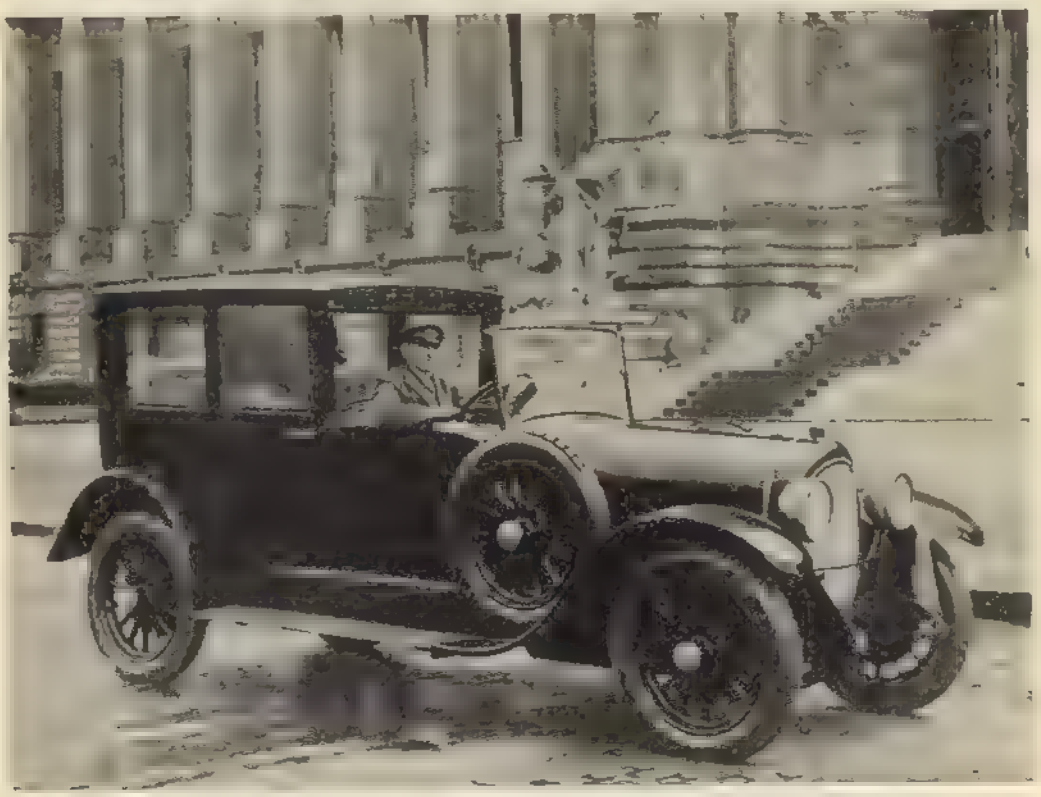
The Delaunay-Belleville is Timken-Equipped



Timken results come only from Timken Bearings. That is why many of the great European motor car manufacturers, like Delaunay-Belleville, use Timken Tapered Roller Bearings—a matter of purely engineering preference.

Beneath the prestige and sales-leverage of the phrase "Timken-Equipped" there is always the plain fact that **Timken-equipped cars are better.**

The Timken Roller Bearing Co., Canton, Ohio

HUPMOBILE DEALERS MAKE MONEY

"A Hupmobile contract is far ahead of all others we know. The factory service policy is 100% co-operation. We would not change our contract with any three others doing even a greater volume of business."

A. H. LATTA
President
A. H. LATTA, INC.
Atlantic City

Dealers or other business men interested in reports from Hupmobile dealers in their own vicinity may secure this information by writing the factory.

A 300% Increase in Sales with Hupmobiles since 1922

In 1922, the first year Alex H. Latta, Incorporated, Atlantic City, sold Hupmobiles, the firm did a gross business of $78,000. Last year, Hupmobile sales ran up to $271,000—an increase of more than 300% in annual volume.

"We were first interested in a Hupp franchise by the ability of an old Model N to pull out of mud holes and ditches and to tow trucks and cars of all sizes and weights to our shop," writes President A. H. Latta.

"When we left the truck business, we looked for a passenger car that would stand up and not worry us to death trying to service it. We went no further than the Hupmobile and we made no mistake, for our business has increased each year."

A. H. Latta, Incorporated, report the remarkable average of 40% repeat sales to former Hupmobile owners, indicating the exceptional owner-loyalty which has become one of the most valuable assets of a Hupmobile dealer.

We will gladly forward details of the Hupmobile contract to interested dealers upon request.

EIGHTS & SIXES

In the Bentley

Price is no particular object. In prestige and performance few cars of the world are its peers. Like many such motors whose high position is conceded, the English Bentley is Timken-equipped.

Europe finds Timken Tapered Roller Bearings an indispensable aid to the sort of economy which reveals itself in a lifetime of impeccable motor car service.

Timkens figure so broadly in European design that the manufacture of Timken Tapered Roller Bearings is carried on in English and French Timken factories.

HUPMOBILE DEALERS MAKE MONEY

JOHN U. BAER

"Most Profitable Automobile Franchise I Have Ever Held"

—J. U. Baer, Newcastle, Pa.

25% of all Hupmobile dealers have sold Hupmobiles for periods ranging from four to twelve years.

Dealers or other business men interested in the progress of Hupmobile dealers in their own vicinity may secure information similar to the above by writing the Hupp Motor Car Corporation.

John Baer, of Newcastle, Pennsylvania, has sold Hupmobiles since the first Model 20 was announced in 1909. In that period he has also held the franchise for other cars, affording him excellent opportunity for making comparisons.

"From my experience I can say that Hupmobile's present contract is the most profitable I have ever worked under," says Mr. Baer. "In addition the low cost of service has been a factor in my successful marketing of more than 700 Hupmobiles, averaging around two dollars per car under the guarantee."

This pioneer Newcastle dealer now handles Hupmobile exclusively, having found that the complete line of Hupmobile Eights and Sixes meets the demands of a majority of his prospects for new motor cars.

It will pay you to investigate the Hupmobile opportunity in your own locality. Contract details will be gladly sent on request.

You can use it— or sell it— —or do both—

Day-Fan "Handy-Vac"

You know what helps sell a car nowadays—the woman's opinion of the upholstery. Take a tip from that and cash in on her desire for a good-looking interior. If she was fussy about it when the car was bought—she's just as fussy about its day-after-day appearance.

Keep her "sold" on your garage and your service by keeping the upholstery in top-notch condition with a Day-Fan Handy-Vac—the small vacuum cleaner with a full suction.

No brush or whisk-broom can keep upholstery as good-looking as Handy-Vac, or do the job so fast. Its husky Day-Fan Motor sucks out the ground-in dirt—no dust is left—therefore, the cloth shines with a showroom newness.

Easy to use—light in the hand—plugs in on any socket.

If you have an accessory shop—sell it there. Useful in the car—needed in the home. Sells for $18.75.

Write for information.

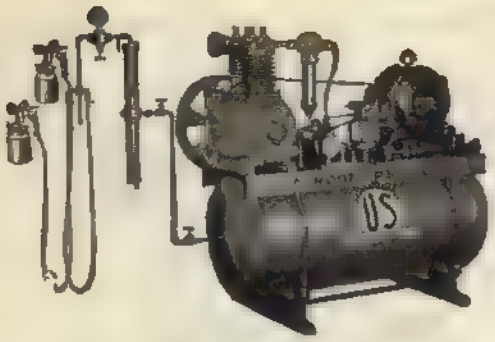
Air Pays Profits

With U. S. Combination Units



This Model

—does this—

—and this and many other things

WHERE compressed air once was used only to supply the *free* service of inflating tires, it now performs a multitude of *profit-producing* jobs for the modern garage or automobile service station. Under the modern flat rate service charge plan this is vital.

U. S. has perfected new double-duty equipments especially for car dealers and garages. These units supply *volume air at both high and low pressure* for the ordinary purposes and in addition, for paint spraying, cleaning motors, cleaning parts at the bench, blowing carbon, spraying springs with penetrating oil, operating pneumatic doors, gasoline systems, air lift grease racks and high pressure lubricating systems.

Model PSE-26, will supply sufficient low pressure air for the continuous operation of two paint guns, or for one paint gun and ample high pressure air for dozens of profitable operations.

The design and construction of this Model PSE-26, which is the twin-cylinder, air cooled, single stage type, assures by the perfectly balanced piston action much greater service than the large bore, single cylinder compressor of similar cubic feet displacement.

U. S. also manufactures all standard sizes of self-contained, automatic air compressors and totally enclosed, self-oiling, high pressure hydraulic car wash units. U. S. equipment is endorsed by leading car manufacturers in their new shop manuals to their dealers and distributors.

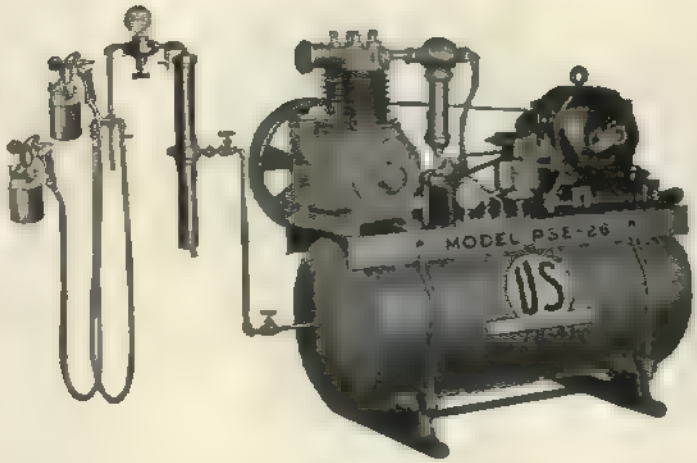
U. S. ANNOUNCES



Combination—Double Duty Air Compressor

MODERN, up-to-date, garages and car dealers now need VOLUME AIR AT HIGH PRESSURE and the United States Air Compressor Company has designed special fully automatic compact, air compressor units to meet these demands.

People simply won't buy a used car with dead paint and rusted fenders. Turn your second-hand car department into big profits and quick turnover with the new U. S. double duty, PSE-26 unit.

This equipment will supply combination service—low pressure (60 to 90 lb.) air for paint spraying and high pressure (115 to 150 lb.) air for tire inflation and other service. The PSE-26 as shown above will supply sufficient air for continuous operation of two paint guns, or one gun and ample high pressure air for tire inflation, spraying springs, cleaning motors, bench nozzles and other purposes. It is well to remember when purchasing an air compressor that the ordinary tire inflation unit equipped with ¼, ½, ¾ or 1 h.p. motor will not furnish sufficient volume air for paint spraying.

Write today for literature describing this new equipment.

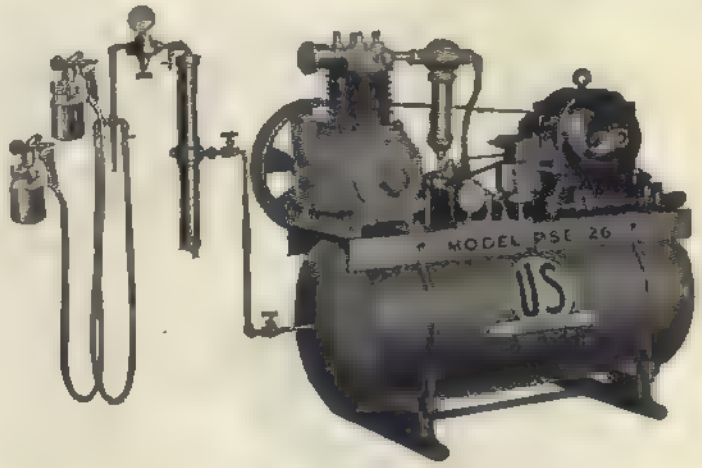
The United States Air Compressor Company

Combination Double Duty Paint Spray Equipment



The constant need of car dealers and service garages for volume air at both high and low pressure for a wide range of uses, has now been met by special U. S. Combination Units. These units, built especially for car dealers and garages, perform a variety of functions efficiently and economically.

This equipment will supply combination service, low pressure (60 to 90 lbs.) air for paint spraying, and high pressure (115 to 150 lbs.) air for tire inflation and other uses. The PSE-26, as shown above, is a twin-cylinder, air-cooled, single-stage unit.

It will supply sufficient air for the continuous operation of two paint guns, or one gun and ample high pressure air for tire inflation, spraying springs, cleaning motors, bench nozzles and other purposes.

It should be remembered when selecting an air compressor, that the ordinary tire inflation unit equipped with ¼, ½, ¾ or 1 h.p. motor, cannot furnish enough air for paint spraying.

U. S. manufactures the only one-gun totally enclosed, self-oiling, high-pressure car washing unit on the market, made for the smaller operator to solve his car washing problem at a moderate cost for equipment.

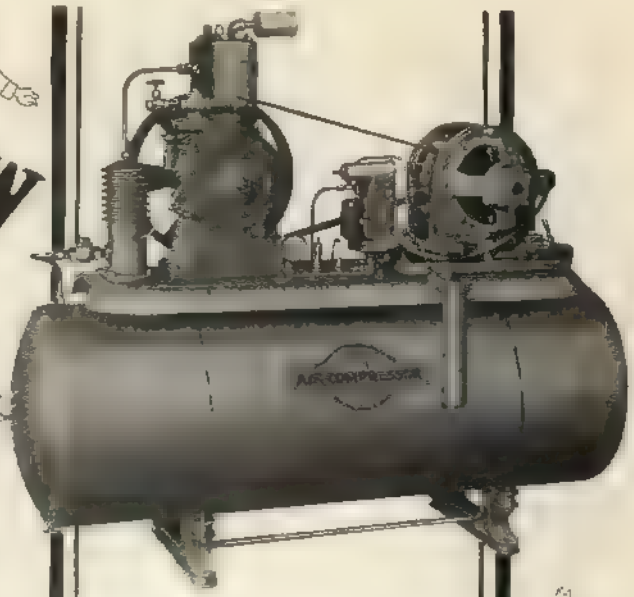
ECO

AIR COMPRESSORS

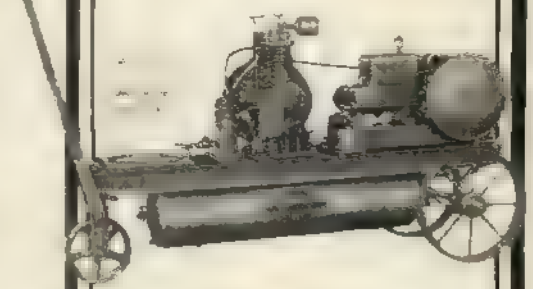


ECO "SF" Compressors are specifically adapted for the various requirements — both air and water cooled with capacities conservatively rated from 10.7 to 13.75 cu. ft. per min.

AIR! Plenty of it—for operating gas pumps, car lifts, paint spray guns, greasing and cleaning equipment, as well as for general shop use and tire inflation.

These ECO Compressors are reliable. Timken Roller main bearings—polished cylinders—stainless steel plate valves—industrial type GE motors—heavy copper brazed tanks—advanced system of cooling—unusual accessibility—they will stand up for years.

Ask for literature describing the complete SF line.



Complete self-contained paint spraying equipments are made in portable form with gas engine drive for industrial use as well as in several stationary models—one, for exclusive automobile paint shop use—another, a combination unit to handle paint spray gun in addition to other general requirements.

BRUTE STRENGTH

"Thru your jobber— his Service is Economy."

WALDEN-WORCESTER HEAVY DUTY WRENCH SET NO. 510

HERE'S the wrench set that laughs at the toughest wrench job on earth—unscrewing big nuts that have become "frozen"—and *bringing up* on big nuts *so they can't work loose!* Assurance that this vital detail of overhaul is taken care of properly.

Every part of "No. 510" is built with a generous margin of strength, to withstand the tremendously multiplied man-power back of the long handles. The new Walden-Worcester Heavy Duty Sockets are cross-drilled to receive handle, affording a very close grip on nut. They are made of a special heat-treated steel — tough, hard, massive. Everywhere *strength!*

No. 510 Heavy Duty Interchangeable Socket Wrench Set includes Ratchet Wrench, Extension Bar, Cross-bar Handle, Plug Connector, Offset Adapter and 10 Hexagonal Sockets, 1" to 2". Complete in all-steel box. Net dealer price $16.80.

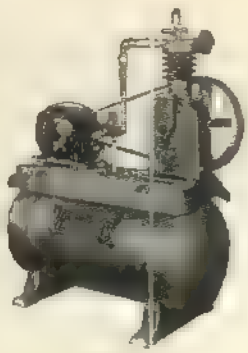
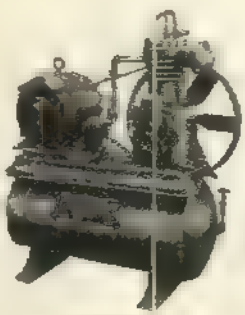
KELLOGG COMPRESSORS

develop more air per horsepower



EM-261-X



EM-152-X

That's Why They Are Logical for Spray Painting

Kellogg Compressors are designed to eliminate oil pumping. No other compressors have this feature. The patented Kellogg lubrication insures long life and less expense for maintenance—an exclusive feature. Kellogg pressure unloaders are the most efficient on the market.

Despite these highly important features, Kellogg paint spraying Compressors cost no more, and in many cases cost less. Recognizing this, 70% of all spray gun equipment manufacturers standardize on Kellogg Air Compressors.

That is why you should insist on Kelloggs when you equip your paint shop.

Buy a KELLOGG Rapid Engine Cleaner—and Watch the Grease Roll Away

Indispensable for cleaning motors, transmissions, differentials, bearings, lubricating springs, removing chassis squeaks, blowing out clogged lines. Can be used with either kerosene or as air gun. Simple to operate. Highly efficient.

Ask your jobber's salesman, or write us for illustrated literature.

"Dependable in Service"

"Hello, London"----
"Hello, Studebaker"
"Send us 1,000 Erskine Sixes"

THAT'S the way the largest export order for motor cars came by telephone—from L. G. Ollier, managing director of Studebaker, Ltd., England, to Paul G. Hoffman, Vice-President of The Studebaker Corporation of America.

This order, over trans-Atlantic radio telephone, represents only the April quota of Erskine Sixes for Great Britain. Amounting to over a million dollars, it tells definitely what the British Isles think of "the Little Aristocrat of Motordom."

But the tremendous hit of this advanced car abroad is only a foretaste of what it has already accomplished in the winning of favor at home. Everyone's talking Erskine—everyone is amazed at its evolutionary performance, its luxury and beauty and comfort.

Hit of hits and sensation of sensations—combined with the great Studebaker Custom line, the Erskine Six brings to Studebaker dealers a 100% added measure of prosperity.

Don't wait—find out now if the Studebaker franchise is available in your territory. Address Dept. 53, The Studebaker Corporation of America, South Bend, Ind.

STUDEBAKER

SEVENTY-FIVE YEARS YOUNG

New WEAVER Curb Jack

Easy and quick to operate

One pull of the rear trigger as shown above causes the ratchet sector to pivot, raising the saddle against the load, which you lift on the first stroke of the handle. To lower the load, merely pull the front lever and keep on pumping. When the saddle is free, it automatically drops to its lowest position.

for quick service . . .

Here's a new jack—handy, light, quickly operated—just the jack you need for quick curb service, where you've little room and less time. An ideal jack to carry in your service car for roadside repairs—light enough to lift in and out easily, and ruggedly built for hard work.

Highlights that will interest you

Extremely quick and easy to operate—raising and lowering controlled from handle

Saddle immediately run up to load by pulling rear trigger, and load raised on first stroke of handle

Load lowered by pulling front trigger and continuing pumping of handle. When relieved of weight of load, saddle drops to lowest position.

Minimum height, 4½ inches amply low to get under the axle with a flat balloon tire

Maximum height, 17 inches amply high to raise the highest axle

Long, curved handle makes it easy to operate jack in spite of overhanging bumpers, spare tires, etc

Requires little space for operation specially valuable for curb service

Rear rests prevent slipping when raising or lowering car

No extension or other loose parts

Strong, yet light construction recommended capacity, 2500 pounds.

A worthy member of the WEAVER JACK *family, which includes*

LO-WAY JACK
HI-LIFT JACK
TRUCK JACK
AUTO TWIN JACK

. . . a Jack for every need

What Sells Brake Lining?

It's the growing and Insistent demand for Safe Driving Allbestos Quality and Performance Insuring Repeat Business

Brake Relining—replacing the indifferent stock equipment—is demanded by motorists who respect their lives and the lives of pedestrians—who want their brakes to respond instantly to the slightest pressure for emergency use, in congested traffic and regardless of weather conditions.

There is a "whale of a lot of money" to be made in selling ALLBESTOS on account of its quality, performance and reputation, and there are any number of reasons why you should push this profitable item:

1) Brakes relined with ALLBESTOS insure [illegible] will result in other work.

2) Gives the driver confidence on account of his ability to stop quickly and surely in an emergency.
3) Decreasing accidents and insuring safety to pedestrians.
4) Brake action is smooth and even regardless of pressure applied.
5) Holds in any weather.
6) Does not grab and lock the wheels.
7) Will not burn out when applied on long hill, on account of its quality and asbestos content.
8) Not too heavily compressed, therefore it cannot swell and freeze to the brake drum.
9) Does not glaze, therefore retains its efficient [illegible].
10) Multiple woven lasting [illegible].
11) Retains its adjustment, requiring the minimum to take up while in use.
12) Admittedly the best value and the "safest" brake Lining manufactured.
13) Three grades, "Regular," for light cars and trucks; "Special," for medium and heavy weight cars. Triple Special for trucks, buses and taxis.
(14) Popularly and profitably priced.
(15) Free Service Sign 8 x 3 ft., and Sales Helps.

Manufactured from the Crude Material by

WEAVER

Safety Power

AUTO LIFT

For raising cars—quickly, easily, safely—to the most convenient height for underbody service and repairs, lubricating and washing, the new Weaver Safety Power Auto Lift is a big improvement on anything yet offered.

It is a wonderful time saver and business builder—it will make friends for its users, and money. Its efficiency—and its owners—will be talked about and advertised by motorists in every community where it makes its appearance.

Some high lights that will interest you—

No installation expense.

Space under car unobstructed for mechanics.

Impossible to lower car accidentally or drop car.

Easy to drive car over rack in position for lifting.

No elevated tracks to worry inexperienced drivers.

Elevates car by axles, leaving wheels free for repairs.

Rated capacity 5,500 lbs.—with ample margin of safety.

Driver does not have to climb down from elevated position.

Speedy—raises car in one minute and lowers in half a minute.

Maximum elevation most convenient for general underbody service.

Lift can be stopped at any desired height to suit convenience of mechanic.

Can be placed anywhere—inside or outside—where electric power is available.

Sell the Man With a New Car a Williams' Automotive Set

Few cars come equipped with complete trustworthy sets of wrenches. And when one of your customers buys a new car, it's your chance to sell him a SET of Williams' Wrenches.

Williams' Automotive Sets contain only Williams' Superior Drop-Forged Wrenches, made from the finest carbon steel, and finished in black enamel—*baked on*. The handy roll cases are of heavy Olive Drab Twill, bound along the edges and equipped with a web strap and buckle.

Every set is carefully selected to give maximum usefulness with the fewest possible wrenches. They're trouble insurance for the car owner—and they build big profits for you.

WILLIAMS
SUPERIOR DROP-FORGED TOOLS

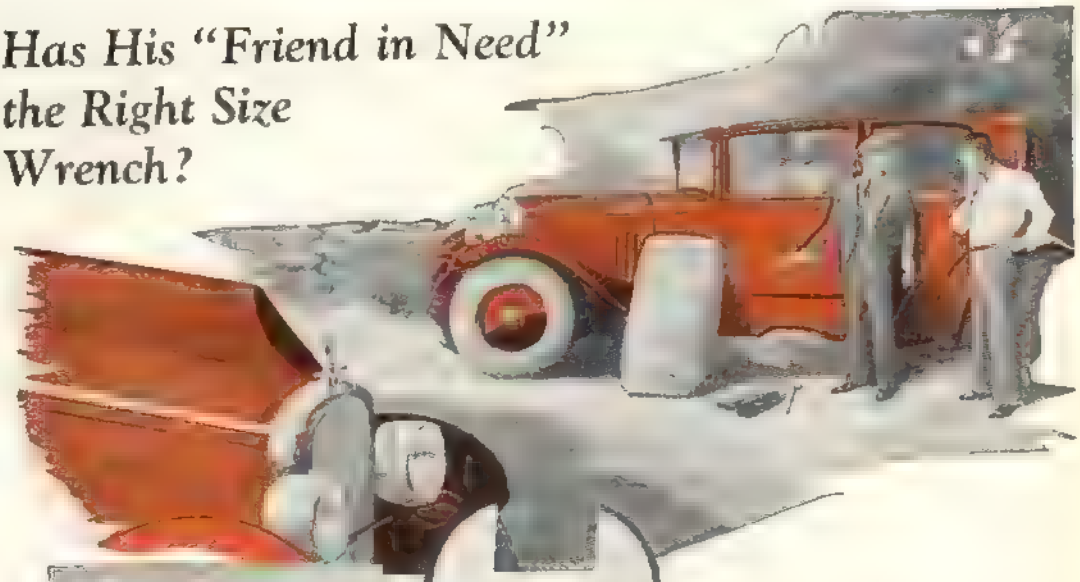
Williams' Automotive Set No. 4, shown above, contains six wrenches caring for the twelve most popular nuts and cap screws. Below is a more complete set for mechanics and service men. Williams' Automotive Set No. 10 covering nuts and cap screws from 4" to 1". No duplicate openings in either set.

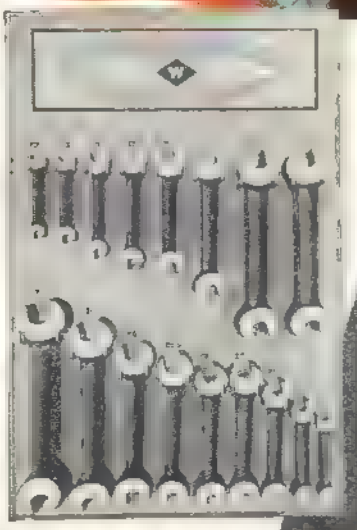
J. H. WILLIAMS & CO.

"The Wrench People"

New York BUFFALO Chicago

Has His "Friend in Need" the Right Size Wrench?





Williams' Auto Wrench Kits in handy roll cases of Olive Drab Twill, are a necessity for every motorist. Like Set No. 25 shown below, all are selected to give maximum helpfulness with the fewest possible wrenches.

Speed up your turnover with Williams' display boards. They are included free to dealers purchasing the wrenches they display. Write for literature describing Model D, above, and other attractive Williams' assortments.

TELL your customer, it's safer to have his own Williams' Carbon Steel Wrenches. It doesn't pay to wait until trouble overtakes him on the road and trust to a "Friend in Need." Because, no matter how obliging the other fellow is, he may not have the right size wrench, anyway.

Outfit him completely with Williams' Superior Drop-Forged Wrenches or, better still, sell him a Williams' Auto Kit. Williams' Wrenches will be his best friends when the emergency comes. And they net you a handsome profit right now.

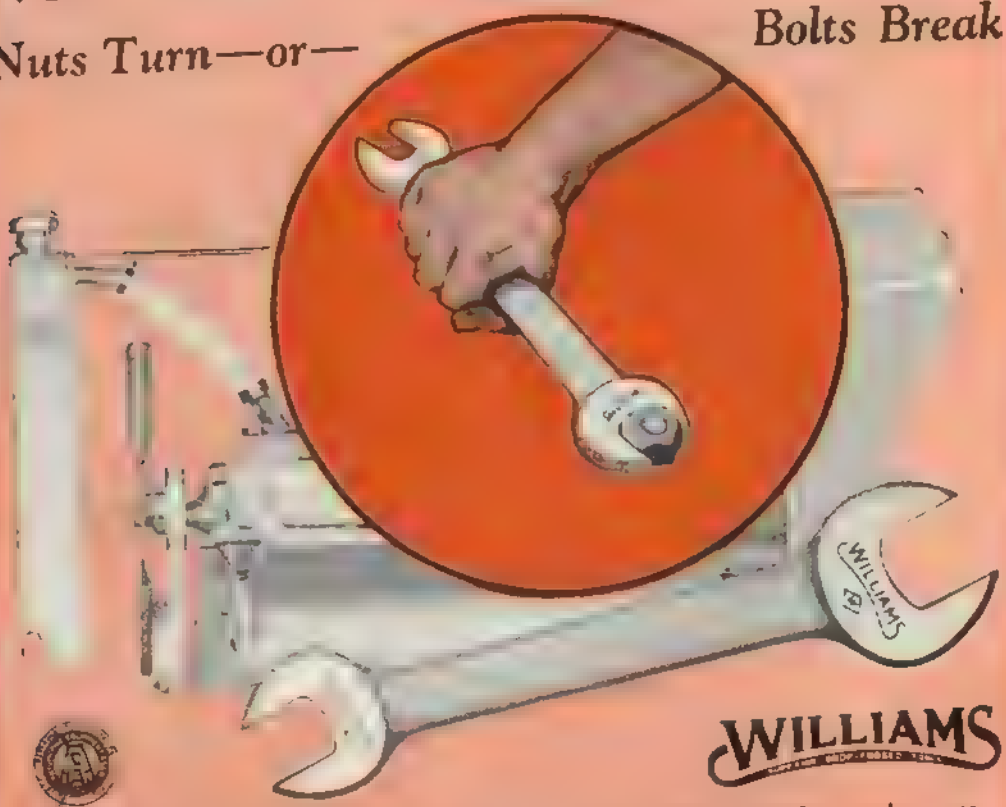
WHEN THE "SUPERRENCH" TAKES HOLD

Nuts Turn—or— *Bolts Break*



WILLIAMS

BOLTS can't say "No" to The "Superrench". When The "Superrench" grips them with its break-proof Chrome-Molybdenum jaws, they must turn, strip the threads, or break; there's no alternative.

"Superrenches" are lighter than carbon steel wrenches with corresponding openings. And their thinner heads and narrower, pointed jaws, make them far handier for any type of work.

But light and slender as they are, "Superrenches" are the toughest ever built. Each "Superrench" is guaranteed to strip the threads of any standard nut or break the bolt.

Furnished heat-treated and nickel-finished, with heads buffed bright.

Whether you buy for use or resale, you'll find Chrome-Molybdenum "Superrenches" as unbeatable as they're unbreakable. *Literature?*

"The Wrench People"

New York BUFFALO Chicago

"I'm Off of These Weak Sisters—Gimme a SUPERRENCH"

The man who finds that ordinary tappet wrenches break, is your best prospect for the Tappet "Superrench." He wants a tool that will stand the gaff—as only break-proof "Superrenches" can. Sell 'em to him, and he'll be sold on you for life.

Tappet Model "Superrenches," forged from super-tough Chrome-Molybdenum steel, are lighter, thinner and many times stronger than wrenches of carbon steel. Their length is ample to prevent burning the hands on hot engine parts. And their heads, set at a 15° angle and equipped with narrow, pointed jaws, make cramped quarters seem roomy.

Tappet "Superrenches" are invaluable, not only on tappet work, but wherever an ultra thin wrench is needed. And remember they're absolutely guaranteed against breakage.

Against the royal-blue background of Williams' Display Board No. 1096, shown above, the handsome nickel-finished "Superrenches" stand out in a way that compels attention and wins big turnover for you.

We cordially invite you to visit our exhibit at the National Automobile Shows Shop Equipment Section: New York—Space D56 Chicago—Space 58 and 59

"The Wrench People"

New York BUFFALO Chicago

THE PIE
is 97·37% yours under the Willys-Overland Franchise

The Willys-Overland dealer franchise has 4 definite, money-making sales advantages that make it the dominant and most desirable franchise in the industry. Advantages that place the "Pie" in front of you and enable you to take most of it for yourself.

Engineering Leadership

For years Willys-Overland engineers have been working to perfect a line of cars far in advance of other cars—a line of cars, thoroughly modern. With the perfection of the Whippet, Willys-Overland now has a completely modern car in every price class.

Each car is engineered according to the latest engineering principles. They are not "old-fashioned" chassis with new bodies. They are modernly engineered in every detail—in engine, chassis and body design.

The battle this year in the automotive industry will be—not over style or even price—but over modern engineering—with Willys-Overland leading the parade.

97.3% Market Coverage

With the Whippet covering 44% of the field—the Whippet Six covering 19% of the field—the "70" Willys-Knight Six covering 23% of the field and the Willys-Knight Great Six covering 11%, you have a line of cars that appeals to 97.3% of the pocketbooks in your community.

The ordinary dealer with one or two cars to sell and covering 15 to 30% of the market cannot possibly have the same opportunity to make big profits as the Willys-Overland dealer. He can only appeal to 30 buyers out of every 100 where the Willys-Overland dealer appeals to 97.

92% Profit Coverage

Out of every $100 spent for motor cars in your community $92 of it is spent on cars such as Willys-Overland offers.

No wonder Willys-Overland dealers are making money. Every day from all over the country letters come in from enthusiastic dealers — some new and some pioneers—who are making more money than they ever did before.

The reason is very clear—they *should* make more money—they have a better opportunity to do so!

Add the Knight Engine

To the outstanding advantages of the Whippet and Whippet Six—to the engineering leadership of the whole line—to the complete coverage both in volume of cars and volume of profits—add to all that the unusual sales advantage of the Knight engine. The engine that *improves* with use. No carbon-removing—no valve-grinding—no noisy tappets or valve springs—less upkeep. The result is dealer profit.

If you are just entering the automotive industry as a dealer; or if you are a dissatisfied dealer; or if you are satisfied but desirous of increasing your profits, Willys-Overland can help you. The Willys-Overland Franchise presents every opportunity for dealers to make maximum profits. Willys-Overland, Inc., Toledo, Ohio. Willys-Overland Sales Co., Ltd., Toronto, Canada.

"Built for service ~ not to a price"

The WILLYS-OVERLAND FRANCHISE

Gives 97% Market Coverage

It Enables You to Compete Successfully in Every Price Class

The Willys-Overland franchise gives you a car for every buyer regardless of what he wants to pay.

Moreover, it assures you of exclusive selling features in every price class.

The Whippet and Whippet Six —priced from $625 to $925— are the lowest-priced cars in their classes offering 4-wheel brakes nationally. Other light cars can but follow their lead.

The two brilliant Willys-Knight Sixes, the "70" and Great Six, from $1295 to $2950, have the patented Knight sleeve-valve engine—which improves with use.

Every year sees an impressive growth in the popularity and sales of these splendid cars.

Thus you handle a line of cars that gives you 97% Market Coverage. You have greater protection against market changes and increased profit opportunities.

Willys-Overland backs up dealers with liberal discounts, sound co-operation in merchandising used cars, and a specific Sales Plan for the dealer's particular community.

Send for complete details: Sales Department, Willys-Overland, Inc., Toledo, Ohio. Willys-Overland Sales Co., Ltd., Toronto, Canada.

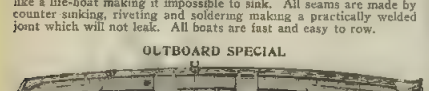
A.C. McCLURG & CO. Chicago, Ill.

ROW BOATS
MULLIN'S STEEL

Made of steel thoroughly tested insuring perfection in construction, equipment and finish. Equipped with air-tight compartments like a life-boat making it impossible to sink. All seams are made by counter sinking, riveting and soldering making a practically welded joint which will not leak. All boats are fast and easy to row.

OUTBOARD SPECIAL



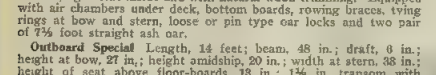
Designed and especially constructed for the application of detachable outboard motor. Runs on even keel and does not bury at stern or ride out of the water at bow. Built so as to neutralize vibration from the motor and is made with an especially constructed transom which cannot be shaken loose by the motor. Finished in aluminum outside, light blue inside and with natural wood trimming. Equipped with air chambers under deck, bottom boards, rowing braces, tying rings at bow and stern, loose or pin type oar locks and two pair of 7½ foot straight ash oar.

Outboard Special Length, 14 feet; beam, 48 in.; draft, 6 in.; height at bow, 27 in.; height amidship, 20 in.; width at stern, 38 in.; height of seat above floor-boards, 13 in.; 1½ in. transom with special corner braces. Seating capacity, 7. Weight crated, 315 lbs

.....Each, **$85.00**

One in a Crate

SIXTEEN-FOOT SULTAN



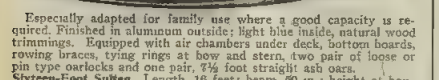
Especially adapted for family use where a good capacity is required. Finished in aluminum outside; light blue inside, natural wood trimmings. Equipped with air chambers under deck, bottom boards, rowing braces, tying rings at bow and stern, two pair of loose or pin type oarlocks and one pair, 7½ foot straight ash oars.

Sixteen-Foot Sultan Length, 16 feet; beam, 50 in.; height at bow, 25 in.; stern, 23½ in.; amidship, 15 in. Weight crated, 275 lbs.

.....Each, **$77.00**

One in a Crate

FOURTEEN-FOOT PRINCE



A very fine family and pleasure resort boat. Rows easily. Finished in aluminum outside; light blue inside, natural wood trimmings. Equipped with air chambers under deck, bottom boards; rowing braces, tying rings at stern and bow; two pair loose or pin type oar locks and one pair, 7½ foot straight ash oars.

Fourteen-Foot Prince Length, 14 feet; beam, 44 inches, height of bow, 22 in.; stern, 21½ in.; amidship, 13½ in. Weight crated, 235 lbs.

.....Each, **$72.00**

One in a Crate

GET THERE DUCK BOAT

A standard boat for sportsmen. Painted dead grass color. Equipment consists of movable bottom board; movable seat; one pair oarlocks; one pair oars and one long or short paddle.

Get There Duck Boat Length, 14 feet; beam, 36 in.; height to top of coaming at ends, 12½ in.; amidship height, 10 in.; length of cockpit, 9 feet. Weight crated, 150 lbs. .....Each, **$60.00**

One in a Crate

NOTE: When Ordering Above Boats Always Specify Whether Loose or Pin Type Oar Locks are Wanted.

ROW BOAT MOTORS
CAILLE 5 SPEED TWIN

Can be readily attached to any type of rowboat by simply tightening two thumbscrews. The motor is quickly adaptable to any angle or pitch of stern, so that the motor always operates in an upright position on any boat

Motor—Two cylinder, two cycle. Cylinders are directly opposed Both fire at same time, eliminating vibration Liberal sized muffler silences the motor

Specifications Bore 3 inches Stroke, 2 inches R P M 200 to 2000 2½ H P actual rating

Cylinders and Pistons—Special fine grained gray iron, accurately ground to size.

Piston Rings—American Ham bored, 3 to each piston

Crankcase—Lynite. Bronze bearings are pressed in.

Crankshaft — Highest grade chrome nickel steel, ¾ inch diameter. Ground finish.

Main Bearings—Phosphor bronze 2½ inches long.

Connecting Rods—Solid phosphor bronze.

Gasoline Tank Heavy pressed aluminum One gallon capacity Strainer in tank, only strained gasoline can enter tank

Main Frame—Heat treated lynite. Opening between clamps, 2 in.

Drive Shaft Housing Brass tubing Amply strong to withstand all thrust strain

Drive Shaft and Propeller Shaft—Stainless steel, ground finish

Gear Housing—Tough lynite. Phosphor bronze bearings are pressed in

Gears—Chrome nickel steel

Propeller—Nickel bronze alloy, almost unbreakable.

Water Pump—All bronze, simple plunger type. Cools motor in warmest temperatures.

Ignition—Eisemann high tension waterproof magneto.

Carburetor—Zenith carburetor with metal float and needle point adjustment

Driving Depth—30 inches from top of boat to center of propeller wheel

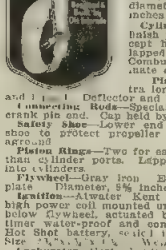
Control -In addition to 6 in 1 propeller the spark and throttle control permit a motor speed from 500 to 1600 R. P. M.

Tilting—Motor is pivoted on main frame, permitting propeller and shaft to pass over obstructions. Propeller can be raised out of water for beaching boat.

Weight -46 lbs. complete.

Model Caille 5 Speed Twin With Dual Ignition System .Each, **$145.00**

ELTO



Can be readily attached to any type of rowboat by simply tightening two thumb screws.

Gasoline Tank—4x tin. Dull nickel finish. Capacity slightly over 1 gallon or enough for about 2 hours running at full speed.

Motor—Two cylinder, two cycle, water-cooled, 2¼ inch bore, 2 inch stroke. Full 4 H. P. 1700 R. P. M. Offset opposed cylinders, permitting straight power thrust.

Crank Shaft—Chrome nickel steel drop forging, case hardened and ground. Long main bearings; lower 3½ inches long by 1⅛ inches diameter. Upper 3½ inches long by ¾ inches diameter Crank pins 1¾ inches long by ¾ inches diameter. All bearings closely ground.

Cylinders—Close-grained gray iron, dull nickel finish polished heads. Combustion chamber except heads water-jacketed. Bore ground and lapped to mirror-like finish—accuracy .0002 inch Combustion chamber entirely machined to eliminate carbon.

Pistons—Fine close-grained gray iron. Extra long, perfectly balanced. Machined, ground and [illegible] Deflector and head entirely machined

Connecting Rods—Special heavy duty phosphor bronze, split at crank pin end. Cap held by heat-treated chrome nickel steel screws

Safety Shoe—Lower end of housing forms a substantial safety shoe to protect propeller when striking obstructions or running aground

Piston Rings—Two for each piston special fine semi-steel. Wider than cylinder ports. Lapped to perfect fit in piston grooves, and into cylinders.

Flywheel—Gray iron. Entire top and rim machined and nickel plate Diameter, 5⅝ inches. Starting handle drops flush into rim.

Ignition—Atwater Kent Unisparker with special non-vibrating high power coil mounted under tank, fully protected Timer located below flywheel, actuated by eccentric on flywheel hub. Coil and timer water-proof and compact Current is supplied by Columbia Hot Shot battery, sealed in moisture and vapor proof cells waterproof Size [illegible] Weight, 4 lbs

Carburetor Pilot adjustment adjustable needle valve type Contains two sixteenth acting automatic valves, giving delicately fine vapor action No float, no dripping of gasoline No flooding when not operating

Propeller-Pump—(Patented). Combining scoop, propeller pressure and syphon effect. Perfect water circulation No parts to wear, no valves to stick Self-draining

Rudder—One piece lynite casting, highly polished. Folds for carrying (patented). Controlled by the line attached to tiller yoke.

Gears—Chrome nickel steel with perfect generated teeth, case hardened and hubs ground.

Propeller Wheel—Lynite. Exceptionally strong Highly polished. Diameter, 9½ inches; pitch, 9½ inches. Two blade, weedless design Elto Weight, 50 lbs. ..... Each, **$145.00**

What a Wonderful "buy" Diamond Walnuts are this year!

They're Better— Yet Lower in Price

For this year, in California's famous Walnut districts, nature and science have combined to produce the ideal combination: an *even higher* quality (due to favorable weather conditions); yet a crop of over sixty million pounds, large enough to insure a *lower price*

This year, there's no reason on earth why you shouldn't enjoy top-quality Walnuts often. A heaping bowl on the holiday table! Tradition and good taste naturally call for it. And what surer way to give that *final touch* to the holiday menu, than by adding plump, flavory Walnut meats to salads, fruit cocktails, desserts and candies!

Diamond Walnuts Are Better Walnuts

Give Walnuts the place they deserve on your shopping list. And be sure you get *the best* Walnuts—full-meated, fine-flavored *Diamond* Walnuts—the pick of California's finest crop to begin with—then graded and selected by hand and by ingenious machines (including an air-suction process more precise in selection than a human could be).

Fortunately, you can be sure. For modern inventive genius has taken the guess out of Walnut buying. Last year—after seven years of experiment—we found a way to brand each Walnut with the Diamond trade-mark—*right on the shell.*

Look For The Trade-mark—And Be Sure

Now you can buy Walnuts just as you are accustomed to buy other quality foods—in a "trade-marked package." The only difference is, this "package" costs you nothing. We brand Diamond Walnuts 30 pounds for a cent—thirty times as cheaply as we could pack them in the simplest 1-pound carton.

As there is usually such slight difference in price, surely it's worth your while to insist upon Diamond California Walnuts: in the shell—each nut branded with the Diamond trade-mark—or shelled (mixed halves and pieces—kept always fresh and sweet in two sizes of vacuum-sealed tins, for instant use).

Your grocer's *fresh* stock of new-crop Diamond Walnuts has just arrived. Order a supply today. Then write for our new book, "*For That Final Touch—Just Add Walnuts.*" It's free—and full of interesting suggestions for "dressing up" everyday meals.

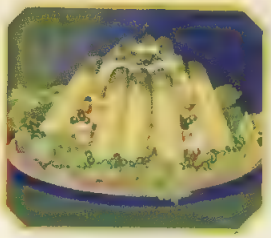
Midwinter meals are real spring treats ~with Asparagus!



A Midwinter Vegetable Salad

Mix equal quantities diced cold boiled potatoes, carrots and peas with French Dressing and serve on lettuce on individual plates. Drain California Canned Asparagus Tips and arrange around salad. Equally delicious with beans, beets or any available vegetables. Mayonnaise supplies a pleasing variation.

What other delicacy offers such variety and freshness so easily and so economically?

"Variety—delicacy—freshness! Aren't these the things you are seeking to give zest to your January meals?

You get them all in California Canned Asparagus. Serve it in soups, in salads, in main course dishes or simply with melted butter—it always supplies the touch of spring that makes the whole meal more refreshing and appetizing.

And you will welcome its convenience and economy. California Canned Asparagus is ready to serve—no advance preparation is necessary. There's no trimming, no waste, and its cost is surprisingly moderate—less now than it has been for years.

Take advantage of this wonderful food—give it a regular place in your menus. Its matchless flavor, and its healthful variety will give springtime freshness to your midwinter meals.

There's health in asparagus, too. Itself a non-fattening food, asparagus as it is generally served by pleasing the appetite, provides cellulose to stimulate the intestines, and furnishes a variety of mineral salts conducive to the welfare of the human body.

APOLLO BICYCLES

The King of the Road

Bicycles look pretty much alike to the average buyer even the expert must depend upon the reputation of the producer for assurance of quality, material and workmanship

Apollo brand bicycles have a reputation of being the best all around bicycles on the market. Materials used in the making and assembling of these bicycles are thoroughly inspected before used. Built by expert mechanics of long experience Apollo bicycles are made to give perfect satisfaction to the user Popular and well known tires that will give long wear are used. By what we say above we can safely guarantee our bicycles.

GUARANTEE

APOLLO bicycles are fully guaranteed against any imperfections in material or workmanship, and repairs or replacements will be made free of charge, provided parts claimed to be defective are delivered to us transportation charges prepaid, and found by us to be defective.

A separate letter should be mailed in order to help us identify the parts.

This guarantee expires December 31st of the year during which purchase was made.

As we do not manufacture Coaster Brakes Saddles, Pedals, Handle Bars, Tires, etc., these various accessories are guaranteed by their respective manufacturers, as is the usual trade custom and all claims should be taken up directly with them

We have exercised the greatest care in the selection of tires for the various grades and all tires are guaranteed by the maker, to whom all claims for adjustment must be made.

N. SHURE CO.

SPECIAL NOTICE

We require a week to ten days time to make shipment of any of our bicycles as we do not carry them in stock completed. Before making shipment we equip them with fresh tires and enamel. By doing this we deliver them with all their brilliancy and also gives the user longer wear.

You could see the engine, too . . if the hood was made of spokes!

But people don't want to see the engine—so the hood is a streamlined piece of polished steel.

People don't want to see the machinery under the car, either—brake drums, steering rods, etc. They avoid it when their cars ride on Budd-Michelin Wheels—streamlined discs of steel that shield the under chassis parts as gracefully as the hood hides the engine.

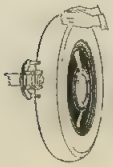
Budd-Michelin Wheels conceal, but they make brakes and other working parts *more* accessible. A few turns on the cap nuts and the wheel comes off—almost as easy as lifting the hood to get at the engine.

Beauty and convenience are increasingly effective sales arguments. Budd Michelins have them both!

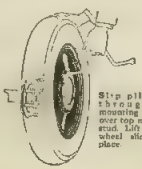
BUDD

WHEEL COMPANY . . . *Detroit*

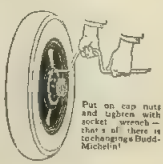
Budd Service Stations in all principal cities—parts and service for wheels of every type.



To put on a Budd-Michelin Wheel set brakes and place wheel in position before the mounting studs.



Slip pilot bar through top mounting hole and over top mounting stud. Lift up and wheel slides into place.



Put on cap nuts and tighten with socket wrench—that's all there is to changing a Budd-Michelin!

Auburn Sets 15,000 Mile Stock Car Record

IN a certified A.A.A. test recently run on the Atlantic City board speedway Auburn model 8-88 completely equipped stock cars established 34 new and shattered 37 old official A. A. A. distance records. The negotiation of 15,000 miles in less than 15,000 minutes required ten days and nights of continuous driving and represents the longest official test ever made with stock cars in the history of the industry. Three cars, two roadsters and a sedan participated in the event which started July 28 and ended August 7. Rain was encountered every night except one, and on one occasion the fog during the early morning hours was so dense the cars were stopped for more than half an hour because of no visibility.

After car No. 2, a roadster, had finished 10,000 miles it was taken off the track thoroughly checked, necessary replacements made, tuned and greased and then sent out for a 1000 mile sprint which was accomplished at a speed average of 72.512 miles per hour. Because application had not been made to try for the 1000 record the performance does not stand as an official record although the time was officially recorded on the A.A.A. electrical timer. Car No. 2 was withdrawn at 12,500 miles with a cracked cylinder block.

Car No. 1, also a roadster, went the full 15,000 miles establishing several new records, the speed average for the distance being 61.3777 m.p.h.

Car No. 3, the sedan, after finishing 2000 miles at a new record of 65.583 for closed cars, turned over on the wet track during the night. After sliding for over 50 ft. on its roof, it righted itself and then crashed through the inner guard rail. The accident tore off two left doors, demolished three fenders, stove in the radiator, and broke the windshield and rear glass. After a delay of seven hours for body and radiator repairs the car was put back into the test without mechanical change and finished the 15,000 miles at an average speed of 62.709 m.p.h. With the loss of the fenders and windshield the car lost its stock status after 2637 miles, but was officially timed for the 15,000 miles.

New records for fully equipped stock cars for distances 5 to 15,000 miles were established by Auburn cars. This shows start of the run

Easy Ride Coach Seat Springs

Universal Spring Co.
Grand Rapids, Mich.

ANNOUNCEMENT is made by the above company of the "slip-on type" coach seat springs. These attach to the seat legs and are said to remove much of the jiggle, jolt, bounce and

road shock of the car. The slip-on type, illustrated, is made in two models 26 and 29. The No 26 balloon slip-on type sells for $3 00 set of 4, the model 29 sells for $2.00 set of 4.

Visolite Deflector

Auto-Light Deflector Co
Alliance, Ohio

VISOLITE, made by the above company, is a transparent green shield, which fits under the headlight rim and over the upper half of the lens to prevent bright lights from causing glare to motorists coming from the opposite direction. It is made in sizes to fit all cars. Price is $1.50 a pair.

Davis Cylinder Reamer

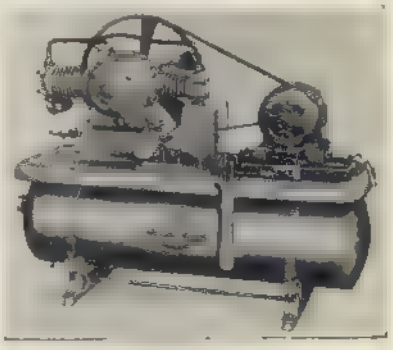
Davis Boring Tool Co.
St. Louis, Mo.

THE cylinder reamer manufactured by the above company and distributed by James M. Diven, can be either motor or hand operated, in or out of the chassis. Equipment consists of the fixture, illustrated, five sizes of reamers, 2⅝ to 5 in., motor attachment to operate by electricity and a ratchet handle to operate by hand. Reamer is turned through cylinder by solid steel feed bar, 1 15/16 in. diameter, 37 in. long; upper half threaded to feed through bronze split feed nut; lower half ground to fit 15 in. cylinder pilot in body of fixture. Eight high-speed steel blades set in right hand spiral. A special feature is the stoning of the blades on an arc. Reamer is set to size before starting.

Eco Two Stage Air Compressor

Service Station Equipment Co.
Bryan, Ohio

THE above company announces its two stage air compressor TS-30, for handling the air service requirements in service stations, garages and tire shops of average size. It is driven by a ¾ hp. motor and has a 30-gal.

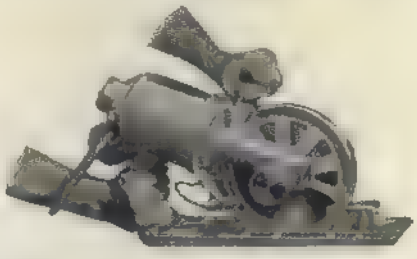


tank and a maximum working pressure of 200 lb. It is equipped with an electric controller set at the factory to automatically maintain constant tank pressure between 130 and 165 lb.

Wallace Electric Handsaw

J. D. Wallace & Co., Chicago, Ill.

THE above company announces its portable electric handsaw for woodcutting on d.c. or a.c. any frequency. Maximum efficiency has been secured by connecting the motor direct to the saw spindle. The guard on the handsaw is locked in a position which covers the blade at all points. When the operator wishes to cut



he releases the safety guard by a trigger near the grip. When the cut is finished and saw lifted, the safety guard or shoe automatically drops and locks into position, covering the blade and will not open until released by the trigger. One handle is of a handsaw type, the other the same as used in guiding a hand plane. With the depth gage the saw can be set to cut to any predetermined depth. Ball bearings are used throughout

No. 22 South Bend Bench Lathe

South Bend Lathe Works
South Bend, Ind

THE above company announces its No. 22, 9 in. junior bench lathe for the machining of pistons, valves, armatures, bushings and other parts. It will cut standard screw threads from 4 to 40, right or left, including 11½ pipe thread. The headstock on the lathe is back geared; spindle has ⅝ in. hole; tailstock may be set over for taper work; compound rest is graduated; cross feed screw has graduated collar; lead screw has 8 Acme threads per inch for cutting screw threads and for automatic longitudinal feed. Equipment includes double friction countershaft. Prices range from $150 to $182 according to type of bed.

"Bat" Supercharger

P. J. F Batenburg Co
Racine, Wis.

A NEW type "Bat" supercharger is now being manufactured by the above company and is available for Chevrolet models from 1924 to 1927. Other models will follow shortly. The supercharger consists of a special design intake manifold including in the vertical lead from the carburetor, a fuel and air mixing device known as the Bat Dual Rotary Hydro Carbon Mixer. This device consists of a double conical series of vanes, with tips meeting in the center. Fuel and air from the carburetor coming into this section of the intake manifold have to pass through these vanes toward the outside of the manifold and then return through the vanes of the upper cone into the center section of the manifold from whence it passes into the cylinders in the normal way. This reversing of the air-fuel flow in the manifold establishes a high turbulence, since the vanes are so arranged as to give the mixture a rotary as well as radial movement. It is claimed much better vaporization of fuel is obtained. The Bat supercharger, differs from the normal or blower type, in that it makes no attempt to increase volumetric efficiency by putting pressure back of the charge. It refines and mixes the fuel and it is said to remove all unvaporized fuel from the mixture, thus reducing crankcase dilution and increasing fuel economy. Since the fuel mixture in leaving the second set of vanes is discharged into the center part of the manifold, it is also claimed there is less disposition for condensation of fuel on the manifold walls. Price of supercharger, including intake manifold, is $10.00.

Pathfinder Road Light

Pathfinder Accessories Corp.
Cleveland, Ohio

THE above company announces a new road light that is so connected with the steering gear that the rays of the light follows the road

either straight ahead or around corners. There is a special model for Fords selling at $10. Two other models sell at $12.50 and $22.50, depending on size

Black & Decker High Cycle Electric Tools

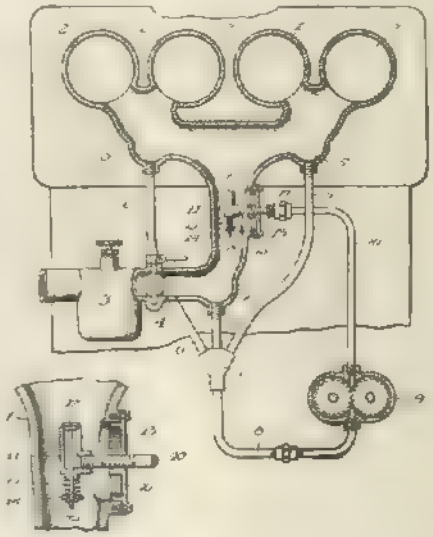
Black & Decker Mfg. Co.
Towson, Md

THE above company announces the development of a new line of super-power electric tools driven by three phase, squirrel-cage motors operating on 180 cycle current. The motors of squirrel cage design, have no commutator or brushes, the absence of which eliminates the source of most frequent service on other types of tools. The rotor is made of copper bars riveted in place in the laminations and welded, eliminating revolving wires with the only windings on the stator. The three phase, squirrel-cage motor maintains its speed under load and will do more work at rated capacity

Ryder Vaporizer

Elmer Ryder
Elgin, Ill.

THE vaporizer is a device designed to continually clear the intake manifold of any unburnt fuel which might find its way into the

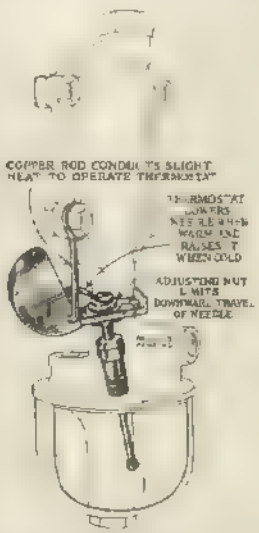


crankcase oil and cause dilution and to feed this unburnt fuel back into the manifold in an atomized state

Thermo GaSaver

Thermo Instrument Co., Inc.
Norfolk, Va.

ANNOUNCEMENT is made of the Thermo GaSaver for Ford carburetors which it is claimed will give more mileage, easier starting, better lubrication, less carbon and cause less



COPPER ROD CONDUCTS SLIGHT HEAT TO OPERATE THERMOSTAT
THERMOSTAT LOWERS NEEDLE WHEN WARM AND RAISES IT WHEN COLD
ADJUSTING NUT LIMITS DOWNWARD TRAVEL OF NEEDLE

overheating. The thermostatic needle valve is quickly installed in place of the old needle valve. Two nuts hold it in place permanently. The thermostat raises the needle when it is cold and lowers it when hot. Adjustment nut limits downward travel of needle. The price complete is $3.50

MUFFLER CUT-OUTS OUTFITS

SNAP

For 1926 and Earlier Ford Cars.

Valve has an opening of 3½ inches, and is securely clamped with steel bands over opening in exhaust pipe. The valve operates lengthwise of pipe without obstructing outlet and is controlled by tempered steel spring which is free from heat of the exhaust and holds valve either full open or closed. Rocking pedal operates the valve through an adjustable steel rod. Complete with pedal, bolts and nuts for attaching.

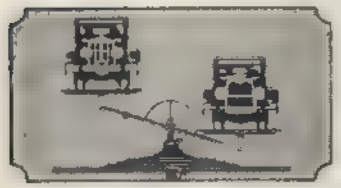
Because of the tremendous torque of its powerful motor its sound is different; it travels, broad-casting an unmistakable warning. With the Motor Bracket the horn can be installed on one of the cylinder bolts on either side or top of practically any motor (including Fords) in any desired position.

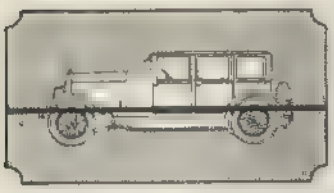
No. 5UF. 7 inch sound projector; length, of lower horn, 12 inches; has universal bracket. Wt. each, 3 lbs. .....Each $3 50

One in a box.

Five features that help Franklin dealers sell more cars



SCIENTIFIC LIGHT WEIGHT
The Franklin Sedan weighs ¼ to ⅓ less than other Sedans of equal size—¼ to ⅓ less weight to handle — to move about — to use up gasoline and tires.



LIGHT UNSPRUNG WEIGHT
Light Unsprung Weight — (the weight of all parts below the springs). With scientific lightweight construction, the pounding of the road is greatly reduced — the chassis absorbs part of the shocks, the springs take care of the remainder—and the body rides easily and smoothly.

TODAY, more than ever, automobile buyers have come to realize that the Franklin car embodies the most advanced and beneficial engineering principles. Repeatedly, Franklin design has forecast changes which have revolutionized automobile construction. Now, as in the past, Franklin continues to pioneer and perfect improvements which increase the desirability of Franklin ownership.

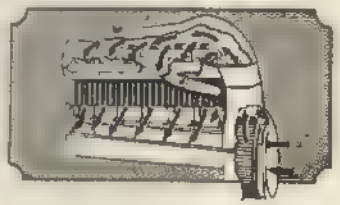
Pictured here are five advanced structural features of the present car — which account in large measure for the fact that Franklin today enjoys the highest percentage of repeat buyers in automobile history. And they are five of the features that help Franklin dealers sell cars to those who have not previously owned Franklins.

Dealers in small towns find that the Franklin franchise holds most attractive possibilities for profits. And this is an unusually favorable time to write for details.

FRANKLIN AUTOMOBILE COMPANY
SYRACUSE, NEW YORK

FLEXIBILITY
Alternate wheels elevated 8-inches —yet the body sits absolutely level. *Flexibility* explains Franklin's long life, freedom from rattles, squeaks and signs denoting wear.

SPRING SUSPENSION
Scientific Spring Suspension — four full-elliptic springs provide an unusual degree of riding comfort—the total spring length on each side is actually greater than the wheelbase.



AIR-COOLING
Forced in by the Sirocco fan, the air is carried in enormous volume, at high pressure, over the tops of the cylinders — down through the vertical cooling flanges which surround each cylinder — with greater amounts allotted to points of greater heat.

Air-cooled

FRANKLIN

Don't Remove Interfering Parts
WORK AROUND THEM

ON 'most every car there are a certain number of awkwardly placed nuts. Ordinary wrenches won't reach or turn them unless interfering parts are first removed. But Williams' new Obstruction "Superrench" will. Its narrow, pointed jaws and 75 head angles are specially designed for just such jobs.

Around the carburetor, manifold, shackles, steering gear and transmission, and in a dozen other places where clearance is limited, the new Obstruction wrench makes rapid, efficient service possible. Like all Chrome-Molybdenum "Superrenches," it is positively guaranteed against breakage. And because the heads are both on the same side of the handle, these wrenches always offer a comfortable working grip. A mighty good buy, either for use or resale.

Furnished in a great variety of sizes for all popular U. S. and S. A. E. standard nuts and cap screws Singly, in sets, or on attractive Display Boards.

AUTOMOBILE HORNS

KLAXON HAND OPERATED

For Automobiles

A hand Klaxon with a vertical push rod. Being as carefully made as the electric Klaxon, it has the genuine, powerful Klaxon note. Furnished with a universal bracket for installation on open cars

Model 3V Baked black enamel..Each, $4.00

One in a Box

Model 3 Same as Model 3V, but with a horizontal push rod .....Each, $4.00

One in a Box

Note: Model 3V and Model 3 can also be furnished with either right or left hand truck bracket

KLAXON ELECTRIC

Model 8C

A new Klaxon with a surprisingly powerful tone. Compact and sturdy. Has motor of the latest Klaxon design and new type tone adjustment. Will afford dependable protection at a very low cost. Furnished with either the motor or dash mounting brackets.

Model 8CS Baked black enamel finish, wound for six volts.....Each, $3.50

One in a Box

Note: In ordering always specify style of bracket wanted.

Model 12C

Klaxon 12C is a motor driven signal of new design. It is a thoroughly dependable instrument with exceptional volume—a warning signal that will meet all needs. The extremely low price of this horn places it in a value class of its own. Furnished with either motor or dash mounting bracket

No. 12C Baked black enamel finish, wound for six volts.....Each, $5.00

One in a Box

Note: In ordering always specify style of bracket wanted

Model 21

Klaxon 21 has a deep, commanding tone that is unmistakable nearly matching the note of the Klaxon 20L. It was designed for use under the hood on cars of the better class Furnished with special Cadillac mounting brackets for Models 61 and 63 Can also be had with motor bracket to fit practically any car.

No. 21 Black enamel finish, wound for six volts.....Each, $15.00

One in a Box

Note: In ordering always specify style of bracket wanted.

KLAXON ELECTRIC

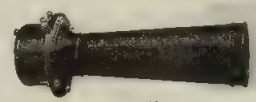
Model 15

Is a big, well made, high-frequency warning with a loud, stinging tone that will command instant attention. An oversize power plant of rugged design and a diaphragm of generous size are responsible for the loud tone. Furnished with either motor or dash mounting bracket.

No. 15 Baked black enamel. Length, 12¼ inches. Wound for six volts....Each, $6.75

One in a Box

Note: In ordering always specify style of bracket wanted.



Model 18

A new Klaxon of the popular high-frequency type. Has a wonderful volume of tone that is produced by a power plant of entirely new design. The back cover is fitted on a machined register, making the horn moisture proof. Can be mounted on the motor of almost any car by means of the unique motor bracket supplied. Can also be furnished with dash mounting bracket.

No. 18 Baked black enamel. Length, 14¼ inches. Wound for six volts....Each, $12.00

One in a Box

Note: In ordering always specify style of bracket wanted.

Model 25

A warning signal of the high-frequency type with curved projector. Has a singular, deep-pitched, singing note and responds with full tone the instant the button is pressed. Has no bearings to cause friction—oiling is unnecessary. The right-angle construction of this horn makes it particularly suitable for mounting on the outside of the car. Brackets for motor, dash and outside mountings are supplied with each horn.

No. 25 Baked black enamel finish. Wound for 6 volts.....Each, $12.50

One in a Box

Note: In ordering always specify style of bracket wanted

INDUSTRIAL HORNS

KLAXON ELECTRIC

The Industrial Klaxon Horn is an electric motor driven signal sounding device. The sound is produced by sound waves in the air created by the rapid vibration of a thin metal diaphragm. These sound waves are concentrated and directed by means of a horn-shaped projector placed in front of the diaphragm. The diaphragm is vibrated by the teeth of a wheel (rotated by an electric motor) striking against a piece of hardened steel fastened to the center of the diaphragm. Klaxon Industrial Horns are unfailingly effective in sounding Time Signals, Code Calls, Telephone Calls, etc., and can be used with absolute safety as Fire or Special Hazard Alarms or as Warnings on Cranes, Derricks, etc. Their weather-proof housings are fitted with brackets for wall mounting and are tapped for conduit. The instruments are finished in fire red enamel and are identical in all respects except their projectors. Furnished wound for multiple operation on any standard voltage from 5 volts to 230 volts D. C and 10 volts to 460 volts A. C. A series resistance is supplied with the 220 volt D. C. instrument for adapting it to 240 or 250 volt D. C. circuits. A Klaxon Horn should be operated only on circuits of the voltage for which the instrument is intended. In all cases the voltage actually delivered to the terminals must not be greater nor be less by more than 5% than the rated voltage stamped on the metal label of the instrument

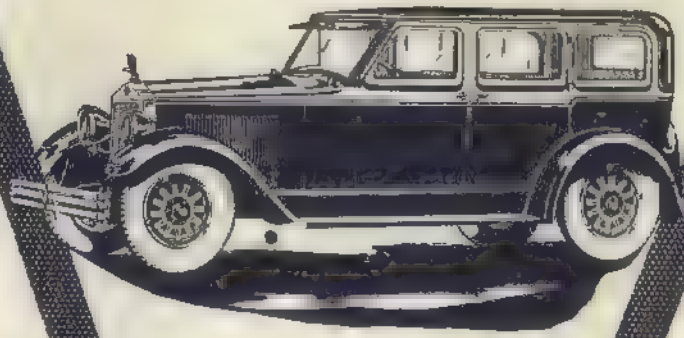
VELIE

THE NAME INSURES THE QUALITY

LONG VELIE LIFE



Royal Sedan

$1635

Fully Equipped, F. O. B. Moline

33% IN FAVOR OF VELIE

1927 *Increase* in New Velie Registrations 22%.

1927 *Decrease* in All Car Registrations 11%.

Today's public is Motor-wise. The above figures (from all 1927 statistics available at this writing) show that *actual Velie registrations* are 22% greater in 1927 than during the same months in 1926, yet total registrations for the same period dropped off 11%. The motor-wise know the reasons—the silent power of the Velie Airplane Type Motor, the beauty and individuality of Velie appointments and body designs. The Velie chassis and motor are cushioned in rubber. Oilless-Noiseless Rubber Shackles are standard on all Velie models. The Velie Motors Corporation is a personally conducted business, maintaining close relationships with dealers and distributors at all times.

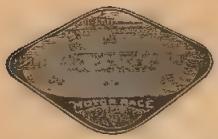
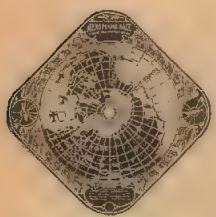
GAMES



No. C29—Motor Race Complete with Checkers, six miniature automobiles race around a real speedway according to moves indicated on the spinning dials. The first one around wins the race. Usual speedway hazards make the play more exciting. It's a fast game with plenty of action for the youngsters. Six metal automobiles 1¼ in. long are furnished, and full directions are printed right on the game. Size 16½ in., square, w't per doz. 25 lb.....per dozen $17.20

ONE DOZEN IN A CARTON



No. C1130—"'Round the World Flyers" Complete with Checkers, a new, never-before-shown game, based on the most thrilling international event of recent years. Four miniature aeroplanes race round the world following the exact course of the U. S. Army Flyers in their celebrated flight. Various hazards add interest and excitement to the game. Size 16½ in., square. Spinning dials are fastened into the corners, playing directions are printed right on the game, and four 1 in. miniature aeroplanes are furnished, w't per doz. 22 lbs.....per dozen $17.20

ONE DOZEN IN A CARTON

BOWLING ALLEY

Is played under the same rules as the "grown-up" game.

Each player shoots two balls from the gun at the end of the board. Spares and strikes are counted in the same manner as the real game. At the pin end of the board is an iron curtain pivoted at the top in a manner that holds the balls after they have been shot.

Varnished in a very attractive manner. The complete game is packed in a strong box.

No. C14—Board 40 in. long and 7½ in. wide.....per dozen $31.10

No. C312—Board 30 in. long and 7 in. wide.....per dozen $17.75

EACH GAME IN A BOX WITH RULES. 1 DOZEN IN A CRATE CASE WEIGHT. NET 55 LBS., GROSS 85 LBS. CASE MEASUREMENTS, 42x24x9 INCHES.

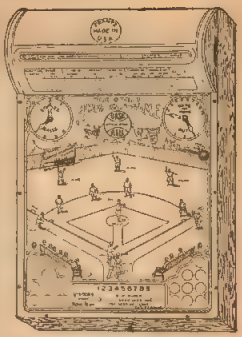
BASE BALL GAME



Every play known to the "National Pastime" instantly recorded on revolving drum. By pressing on the push button the wheel is started to spin revealing the plays opposite the space, which shows condition on bases.

The plays that can be made on this board have been compiled from the actual plays in the world series of a number of seasons.

Fans are enthusiastic about the game as it fills in the long gaps between regular games. It makes fans of the ladies and children who have never seen a game as it teaches them how the actual games are played. It is not only a fine thing for homes but for club rooms, news stands, recreation centers, Y. M. C. A.'s, wherever a bunch of youths or men gather.

This is a product of quality and will last for years. It is not alone a holiday game but an all around seller. Finished in handsomely lithograph diamond in four colors.

No. C100—Size of board 9×13½ in..... per dozen *$24.00*

EACH GAME IS PACKED IN A SEPARATE CARTON SHIPPING WT TWO LBS. ONE DOZEN CARTONS IN A BOX

INTERCOLLEGIATE FOOTBALL GAME

"Intercollegiate Football" is mechanically the same as "The Great American Game" of baseball. A revolving drum, on which is printed all the possible plays known to football, is set in motion by the compression of a push button on the right side of the gridiron. When the button is released the drum automatically stops and reveals the play directing the movement of the teams.

The gridiron is handsomely lithographed in four colors on sheet steel. Each toy is packed in an elaborately printed paper carton with a "Silent salesman" display card enclosed.

No. C200—W't per doz. 32 lbs.....per dozen *$24.00*

ROLLING LADDERS
COBURN PATTERN
STYLE "A"

Will Run on Curved or Straight Track

The Heavy, Ball Bearing Top Carriage consists of a Steel Bar and two Drop Forged Steel Pendants which allow the carriage to swivel.

The Track is the Original Coburn Round Trough inclosed track, with forged steel track brackets spaced not over 6 ft. apart.

The Bottom Rolls are Coburn Rubwood Wheels, made with layers of laminated wood impregnated with rubber with a heavy rubber tread as part of the wheel. Wheel is steel bushed.

Solid Straight Sides, Natural Wood Finish

Sides 4½ in. Wide, Treads 5½ in. Wide, Ladder 14 in. Wide over all, 5½ in. Pitch to a Foot in Height, Well Braced, Strong and Rigid

Hard Pine—Complete up to 16 ft. Long, Weight Each Complete About 65 Lbs.	Each,	$20.00
Oak—Complete up to 16 ft. Long, Weight Each Complete About 67 Lbs.	Each,	24.00
Extra Length—Over 16 ft., Add	Per Foot,	1.00
No. 1 Track—Coburn, with Brackets	Per Foot,	.25
Ladder Carriage—With Bolts	Each,	8.00
Bottom Rolls—With Brackets	Per Pair,	4.00
Bottom Rolls—Rubwood Wheels Only	Per Pair,	2.50
Adjustable Side Shelves	Each,	2.00
Pine Ceiling Strips	Per Foot,	.20
Oak Ceiling Strips	Per Foot,	.30

Open Stock.

STYLE "B"

Will Run on Curved or Straight Track

The Carriage has slides which allow the Ladder to be pushed back against the shelving into a vertical position out of the way when not in use.

The Track is straight grained hardwood accurately turned to 1¼ in. round, polished and oiled.

The Track Brackets are Steel or, occasionally heavy Cast Iron.

The Bottom Rolls are Coburn Rubwood Wheels as described above.

Straight or Bent, Natural Wood Finish

Sides 3 in. Wide, Treads 4 in Wide, Ladder 16 in. Wide Over All, 2½ in. Pitch to a Foot in Height, Strengthened and Braced with Steel Rods and Brackets.

Hard Pine—Straight Ladder, Complete, Weight Each About 48 Lbs.	Each,	$18 00
Oak—Straight Ladder, Complete, Weight Each About 50 Lbs.	Each,	22 00

Bottom Rolls—Complete with Brackets	Per Pair,	4.00
Bottom Rolls—Rubwood Wheels, Only	Per Pair,	2.50
Adjustable Side Shelves	Each,	2.00

Open Stock

ROLLING LADDERS
COBURN PATTERN

STYLE "C"

For use when there are obstructions or conditions of the floor which will not permit a ladder to run over it.

Track is Tubular Iron which must be securely fastened, preferably to uprights to secure sufficient strength.

Top Carriage is the same as furnished with Style "B"

The Ladder is of the same material and workmanship as Style "B."

Instead of Bottom Rolls, the Style "C" is furnished with Rubber Covered Fender Rolls that roll against edge of counter ledge.

Bent Ladder

Hard Pine—Complete, Weight Each 45 Lbs.	Each,	$15.00
Oak—Complete, Weight Each 48 Lbs.	Each,	22.00
Track—Tubular Iron, with Brackets	Per Foot,	.30
Ladder Carriage—Complete	Each,	6.00
Fender Rolls—Complete with Brackets	Per Pair,	2.00
Fender Rolls—Rubber Covered Rolls Only	Per Pr.,	1.00
Adjustable Side Shelves	Each,	2.00

Open Stock

STYLE "D"

For use in Vaults, File Rooms and all small rooms where it is desirable to transfer the ladder to different runs of track in the same room

The top fittings allow the ladder to be easily removed from the track. By having tracks properly arranged, all parts of shelving are easily accessible by moving ladder from one track to the other

High Grade Ladder. Wood Track same as with Style "B." Coburn Rubwood Bottom Rolls, same as with Style "B"

Straight or Bent Ladder

Hard Pine — Straight Ladder, Complete, Weight Each 48 Lbs. . . . Each, $12 00

CALLS.

GOOSE AND CRANE.

Nickel plated brass shell with telescope extension; wood mouth piece and reed holder; pipe organ reed.

Fuller. Wt. doz., 3½ lbs....Each $1 65

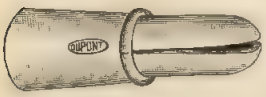
DUCK.

Allen's. Maple shell, natural finish; brass reed with cedar holder contained in a brass tube; heavily nickel plated. Will give call of any species of duck or waterfowl. Wt. doz., 2 lbs. .....Each $1 00

Broad Bill. Latest invention; will produce, with perfect accuracy, any call of our native ducks, from the short, choppy Teal to the long, dignified call of the Mallard. Wt. doz., 2 lbs. .....Each $0 75

CROW.

Purdue. Wood shell, nickel plated end. Wt. doz., ¾ lb.....Each $1 00



Dupont.

Made of ivory pyralin, in four pieces, easy to adjust. Will give the service a sportsman expects. Assorted colors. Wt. doz., ½ lb.

Dupont .....Each $1 00

CALLS.

CROW.

Jahn.

Made of ivory pyralin, in four pieces. Gives a most natural tone. Wt. doz., ½ lb.

Jahn .....Each $1 00

HOW TO USE A CROW CALL.

Place the very ends of the two split halves of the call to the lips and give short, quick blows; do not attempt to place the lips over the entire end, but just the very point, leaving the two sides of the "Call" open for a portion of the air to pass out. If a finer tone is wanted, close the front teeth upon the split halves, hold in the right hand while blowing, with the hand in a hollow shape around the end. This produces the deep call of the crow. Use care to keep dirt out of the call and do not dip in water, but keep dry.

PLAYING CARDS.

CONGRESS.

Look for the name "Congress" on every box.

No. 606W. Air cushion finish; gold edges; whist size, 2¼x3½ inches. Backs are reproductions of the most artistic paintings in full color and gold. Wt. doz., 3¼ lbs. .....Package $0 85

DECOYS.

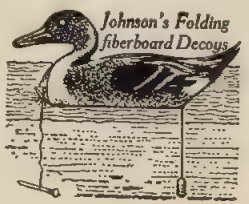
WOODEN DUCK.

No. 1. Made from selected cedar, painted true to life; glass eyes; carried in the following patterns: Teal, Mallard, Widgeon, Sprig, Blue Bill and Canvas-back. Wt. doz., 21 lbs.....Each $1 25

No. 1. With Leads and Strings Complete .....Each $1 40

FOLDING.



Johnson's. Printed in natural colors on tough jute fibre board, better than that used in high-grade shot gun shells, so thoroughly waterproofed and reinforced that they last indefinitely. They have every appearance of a full, round duck body, ride perfectly in any weather and the slightest wind keeps them moving, making them most effective.

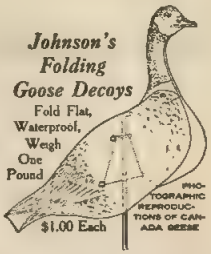
The ⅝-inch cedar float, also waterproofed, slides snugly inside the body to spread and float it. A balancing device attached to the float makes tipping impossible. Suggestions for different ways of using are printed on bottom of each decoy.

Carried in Mallards, Canvas Back, Sprig and Widgeon. Wt. doz., 7 lbs. .....Each $0 55

Packed ½ doz. in canvas bag.

DECOYS.

FOLDING GEESE.



Johnson's. A wonderful goose decoy. Life-like, light and inexpensive. Photographic reproduction of Canada geese and Brandt in natural colors on tough jute fibre board. Triangular frame on heavy wire stake holds body open. Folds flat for carrying. Wt. each, 1 lb. Packed one dozen in canvas bag; ⅔ doz. Canadian Honkers and ⅓ doz. Brandt .....Each $1 00

GAME CARRIERS.

No. 1 No. 89

No. 1. Three strap; rawhide; extra heavy sole leather; stitched handle; fancy stamped. Wt. doz., 7 lbs. .....Each $2 75

No. 2. Four strap; rawhide; extra heavy leather; stitched handle; fancy stamped. Wt. doz., 8 lbs. .....Each $3 25

No. 89. Barnum, with canvas center piece; shaped wire at each end in which to carry game. Wt. each, 2¼ ozs. .....Each $0 20

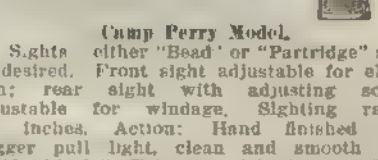
SINGLE SHOT TARGET



Camp Perry Model.

Sights either "Bead" or "Partridge" style as desired. Front sight adjustable for elevation; rear sight with adjusting screw, adjustable for windage. Sighting radius 9½ inches. Action: Hand finished with trigger pull light, clean and smooth with no "backlash." Trigger and back strap finely checked to prevent slipping. Finish: Full Blued. Checked Walnut stocks. Frame edges mechanically stippled, with flat top and sights matted to prevent sun-glare or light reflection, thus eliminating the necessity of "smoking" the sights to obtain clear, sharp definition.

TARGET MODEL, CALIBRE 22.

Full Blued, Checked Walnut Stocks.

This model is made to handle the standard caliber .22 Long Rifle cartridges, and will prove most popular with shooters, sportsmen, trappers, and others, desiring a high-grade pistol adapted for this economical and easily obtained ammunition.

With its adjustable target sights, long barrel, light trigger pull and splendid balance, it possesses all the advantages of a single-shot target pistol, with the additional features of automatic action, obviating the necessity and inconvenience of reloading for each shot, and furthermore, permitting unlimited practice in that present popular branch of shooting—rapid-fire and snap-shooting.

The pistol is equipped with a Safety Lock which, when the arm is cocked, may be pushed upward, thus positively locking hammer and slide. This Safety Lock is located within easy reach of the thumb of the hand holding the pistol and may be instantly pressed down when raising the pistol to the firing position. It also acts as an indicator showing whether or not the pistol is cocked.

Net each

NO. 22TCAP—For the .22 long rifle rim fire cartridge, either lesmok or smokeless greased cartridges only ("greaseless" may be used provided they are slightly lubricated,) 10 shots, 6½ in. barrel, length over all 10½ in.. bead or partridge front sight, adjustable for elevation; rear sight with adjusting screw adjustable for windage, distance between sights 9 in., weight 28. ozs. . . . . Engraved by SUFFOLK ENGRAVING & ELECTROTYPING COMPANY, CAMBRIDGE, MASS.

The Chiffons & Printed Silks Paris is now wearing..

Practical only if guarded from two enemies

THE Longchamps track is brilliant now with smart women wearing the new creations of the Paris couturiers

Everywhere are printed silks and chiffons, the newest versions of silk crepe a bewildering variety of lovely fabrics in fascinating colors!

Such delicate fabrics, such exquisite colors *are practical only if guarded from two enemies.*

The first danger is rubbing with cake soap. Rubbing destroys the rich, soft sheen of silks and chiffons

The other menace is the destructive alkali contained in so many soaps—regardless of whether they are flakes, chips or cakes Alkali fades colors and weakens the sensitive silken fibres —may cut their life in half

With Lux you avoid these destructive foes of silks and chiffons.

The rich bubbling Lux suds cleanse without harmful rubbing. The tissue-thin Lux diamonds contain no harmful alkali Any fabric that is safe in water alone Lux leaves bright and unfaded, as beautiful as new. Lever Bros. Co., Cambridge Mass.

59 keys to their pocket-books

Car owners, farmers, mechanics, electricians and others who buy tools have widely varying needs but they agree in this respect: They like to get the exact type of tool they want with the least possible hesitation or uncertainty.

The fifty-nine Crescent and Smith & Hemenway Wrenches and Pliers on the WC1 Display Board (size 24½ x 48½) cover a range of uses that will fit most of their small-tool requirements. Selection of the exact type and size of tool required is made easy and simple.

The case is a valuable sales help—as many dealers have already discovered. It will be supplied to you through your jobber at the price of the tools only, with no charge for the case.

In addition to the WC1 Display Case, an attractive sales help is the set of cardboard cutouts for window and counter display. These little mechanic figures, like the illustrations below, hold wrenches and pliers, and fit in easily with other display units.

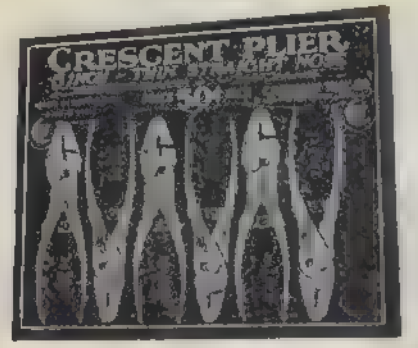
CRESCENT PLIER ASSORTMENTS

SLIP JOINT PLIERS.
THIN NOSE.



This assortment consists of one-half dozen L25-6 inch thin, straight nose pliers, and one-half dozen L26-6 in. thin straight nose pliers, together with the display card shown above. The 5 inch are mounted on the card and the 6 inch are in regular cartons in the package. The display card measures 8½x11 inches and is equipped with a lock easel back which prevents it from falling over on the counter or case. The assortment is furnished at regular price of the dozen pliers with no charge for the display card. The L25 and L26 pliers are listed in open stock on opposite page.

NO. DB7—Assortment pliers, weight each 5 lbs. Net per assortment $7.50

PACKED ONE ASSORTMENT IN A BOX

SOLID JOINT PLIERS.
LONG NOSE WITH WIRE CUTTER.

CRESCENT LONG NOSE PLIERS.

This display consists of six six-inch Crescent Long Nose Pliers mounted upon a heavy cardboard display card. The card is equipped with a lock easel back so that it will not fall over on a glass counter or case. The pliers are securely fastened to the card so that they cannot fall off or be stolen. The displays are packed one in a box. Shipping weight 2¼ pounds.

The Crescent Long Nose Plier is made of the same special analysis steel that other Crescent pliers are made of. They are drop forged, hardened and oil tempered, giving them a wonderful strength and durability. They have the regular Crescent checkerdot knurled handles and are beautifully hand polished. The wire cutter on these pliers will give excellent service without chipping or nicking, making a clean break in a wire with one snap. The Long Nose Plier is made in six-inch size only. Covered by the usual Crescent guarantee of perfect satisfaction or money back.

Retail price of pliers, 75c each.

The case contains no slow-selling items.

A tag, giving the retail price of each tool is tacked beneath the tool it describes.

The sketch below shows the manner in which the tools are fastened to the back of the case.

The small wing nut is easily unscrewed, allowing the customer to handle the tool. In this way, tools can be sold direct from the board and replaced from stock.

The case is made of oak, handsomely finished and of dust-proof construction.

The glass is securely fastened in place and the door is equipped with a lock to prevent petty thieving.

The WC1 case can be had at the regular price of the tools displayed in it. Shipping weight, packed, 106 lbs.

Net Each

NO. WC1—Display Case complete with tools as described above $87.10

SLIP JOINT PLIERS.

REGULAR NOSE.

This assortment consists of one-half dozen G25 five-inch MoToR KIT Pliers and one-half dozen G26 six-inch MoToR KIT Pliers, together with the display board pictured above.

Three pliers of each size are mounted on the card as shown, and the remaining three of each size are packed in separate cartons.

The display card measures 8½x11 inches. It is equipped with a lock easel back, which prevents the card from falling over on the showcase.

The pliers retail for 50c each, total for the assortment, $6.00.

Assortment DB8 is furnished at regular price of the pliers alone, without extra charge for the display card.

Sales Suggestion: Crescent MoToR KIT Pliers advertising is impressing people with the idea of buying two pliers—one for the car and one for the house. Why not suggest this?

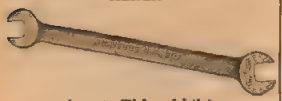
WILLIAMS TAPPET "SUPER-RENCH"



Long—Thin—Light

"SUPERRENCH" Tappet Wrenches, especially designed for valve tappet adjustment service, are made of Chrome-Molybdenum Steel, the strongest and toughest material obtainable for the purpose.

Their length is ample for ease of operation without burning the hands when the motor is hot (the only time when tappet adjustment should be made). The angle of the opening is the most efficient for close quarters where clearance is limited.

Furnished heat-treated and Nickel-Finished, with heads buffed bright.

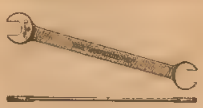
No. 1063—Set contains 2 each of Nos. 1090D, 1092F and 1094 superrench. Offers the most comprehensive service for tappet adjustment covering every size from 1/4 to 3/8 in., w't per set, 2 lbs. ..... per set $15.40

ONE SET IN A CANVAS ROLL

WILLIAMS "SUPERRENCH"



Made from chrome-molybdenum steel. The strongest, toughest and most desirable material for the purpose ever produced. They are guaranteed to strip the thread of any standard nut or break the bolt before spreading the jaws.

They are particularly serviceable in close cramped quarters, the head being thinner and jaws narrower than regular wrenches with same opening.

Double head, 15 degree angle, nickel finish with heads buffed bright.

Hibbard Hardware for Hard-Wear

CRYSTAL ONYX GEAR SHIFT BALLS

Manufactured crystal onyx having a beautiful grain of assorted tones and colors. The color or lustre lasts indefinitely—does not become dull or fade out. The ball will not crack. A good looking and greatly appreciated gift.

Imbedded in each ball is a master bushing known as Number "O" which will fit several cars as you will note by referring to chart below. Other cars require adapters to fit the particular thread. These adapters screw into the master bushing and then onto the gear shift lever.

We furnish an adapter, when requested, with each ball. The adapters are exchangeable at any time.

Engraved by PREMIER ENGRAVING COMPANY, ST. LOUIS

CENTURY ago Keats poured forth his adoration of Hellenic art in the "Ode to a Grecian Urn." To him, the utmost realization of beauty was to be found in the simplicity and grace of this vessel.
As truly Grecian in line and form as the ruins of the Parthenon is the exquisitely proportioned glass shown above. Artistic and craftsmen of the Luminaire Studios have been accurate in catching the mood of ancient Greece in the designing and executing of this luminaire.

Quick Sales Without Talk

CUSTOMERS buy Dietz Lanterns without talk.

They don't have to be convinced that Dietz Lanterns are what they want—they KNOW.

Since you pay your store salesmen for their TIME—and self-selling Dietz Lanterns save that time—PROFIT on Dietz Lanterns is better, quicker, surer—with no come-backs.

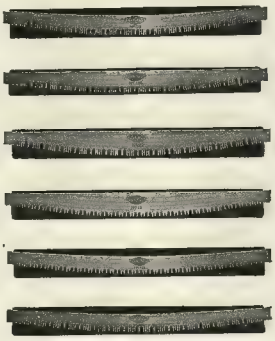
Small wonder then that most hardware merchants prefer to sell Dietz Lanterns.

R. E. DIETZ COMPANY, NEW YORK

LARGEST MAKERS OF LANTERNS IN THE WORLD—FOUNDED 1840. OUTPUT DISTRIBUTED EXCLUSIVELY THROUGH THE JOBBING TRADE

A DIETZ NO. 26 DISPLAY STAND HELPS CUSTOMERS TO HELP THEMSELVES

Quicker Sales — Better Saws and More Profit to You



Customer satisfaction means more saw sales to you. This is strongly shown by the demand, steadily increasing, for Simonds Crescent-Ground Cross-Cut Saws. These Saws are the best selling Cross-Cuts, because they have for years proved up to requirements for better saws that hold their edge longer and cut faster without binding in the kerf. They are fully guaranteed by the makers.

Your next order should call for Simonds Cross-Cut Saws—not only because they are more satisfactory to use, but also because they are more satisfactory to sell. Our selling proposition and dealers' discounts will interest you.

Write for them now.

Dorfan

The *Exclusive* Electric Train Line

DEALERS who carry the Dorfan line have one very important advantage over those who carry some other line instead—namely, Dorfan's exclusive **"Construction"** feature. For Dorfan, with vision made keen by years of experience in the toy business, **foresaw** the present great and growing demand for educational and construction toys and met it with a practical, durable "take-apart" Locomotive.

The Dorfan "Loco Builder" is the **only** "knock-down" electric locomotive made. And because it is fully protected by Dorfan patents, it is obtainable **only** in the Dorfan line. If you stock this line you will profit by this feature and by the increased demand arising from this year's wider Dorfan Advertising Program. In millions of homes all over America the Loco Builder story will be read with eager interest. Many of these homes contain customers that YOU should serve.

ECO is different

"There's something about that word that draws the crowds"

"It's different"—and people throng the show room of the newly announced car. *"It's different"*—and traffic jams the newly opened bridge. *"It's different"*—and autoists flock to the ECO Automatic.

The unusualness of ECO makes motorists stop. The novelty of setting a dial—applying the chuck—and waiting for the bell to stop ringing fascinates them. They return time after time. And it's surprising how many become customers.

Bring in the motorists and boost business. Write today for the complete story on ECO Automatic Air Stations.

Courtesy Eagle-Ottawa Leather Co *Paper, Courtesy Butler Paper Corporation*

FOUR-COLOR PROCESS PRINTING ON ROUGH PAPER

There are times when it is desirable to reproduce merchandise in colors on something other than a smooth finished paper without resorting to stunt or trick printing. The process-plates used in printing this insert were made by enlarging the screen negatives of direct-from-the-object color plates. The pictures shown here represent but a portion of the original plates. The enlarged plates retain all the details of the originals, and the screen is sufficiently coarse to print readily on machine finish, text, or newsprint papers. The direct photographs of original groupings on color separation negatives, engraving of original and enlarged plates, and the printing of this insert were done by The Dean-Hicks Company of Grand Rapids, Michigan.

Prices on Elgin Watches are Subject to Discount

People find the Elgin "The Professional Time-keeper." It is the natural reaction of carrying a time-piece of authority. An Elgin watch may be the plainest of practical time-pieces or it may be encased in the finest example of the gold and platinum smith's art. But it is always true to the one and only thing a watch is for—to tell time and tell it right.

SOMETHING NEW IN RADIO

The 627T

Six tube set, handsome in appearance and ample in operation. Designed to bring in distant stations clearly and naturally. The number 627T is the outstanding leader in sets of its class. The coils are of the low loss type. Push-pull amplification is used, whereby perfect reproduction is obtained. The modified straight line frequency condensers are also used and controlled by vernier dials. Reading shows through beautifully designed windows on panel. By this method a finer tuning is obtained. All wiring is done underneath a sub-panel, and very few wires are visible. Patented double sockets are used to assure perfect contact. The panel is of beautiful walnut finish. **$150.00**

RA9001A. Set only.

The 430 Console

BABY GRAND CONSOLE 430

Height—46"
Width—33"
Depth—30"

Panel Dimensions
Height—8½"
Depth—10"
Length—14" to 30"

5-Ply Walnut top. Butt walnut ends beautifully finished. Butt walnut lid inlaid with beautifully selected moulding. Solid walnut legs handsomely carved. The console contains the Echo speaker 14 wide with a 25" throat made of a combination of woods producing a wonderful tone quality. There is ample room in cabinet to accommodate all batteries or eliminators.

This console is a work of art and has been most favorably received by those who have had the privilege of seeing and examining it.

It is built to accommodate either the Elkay or the No. 627.

RA9002. Console only..... **$255.00**

The 428 CONSOLE

Height	44"
Width	30"
Depth	16"
Panel Dimensions	7x26"

Tone Chamber, 14" wide. Has beautiful scroll work to harmonize with the general construction of the cabinet. Finished in walnut or mahogany with hand-rubbed lacquer, two-tone or plain, with gold stripes. Will house a radio set 26" long. Accommodates batteries and eliminator. Full piano hinge on top and fall. The Elkay or the #627T may be had in this Console.

RA9002A. Console only..... **$92.20**

The 428 Console

The 527T

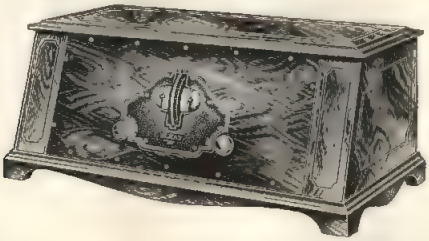
The No. 527T

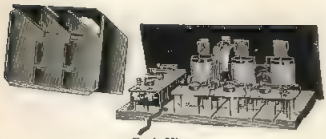
Five tube tuned radio frequency set. It is designed particularly for simplicity of operation and satisfactory reception. It has two dials vernier controlled and the same in panel design as model No. 627T. Automatic resistances are used with one rheostat for filament control. Coils are mounted underneath a sub-panel. Patented U X double socket contacts are used. **$105.00**

RA9003. Set only .....

See Page 548 for Accessories for these Sets

THE ELKAY TRU-PHONIC





Back View

THE Elkay synchronized automatic Tru-Phonic 6 tube receiving set is one of the most up-to-date receivers on the market today. It is completely shielded to prevent interstage coupling or electromagnetic pick-up which often causes great trouble in the congested area and greatly impairs selectivity.

The Elkay radio frequency circuit is the result of untiring research and makes use of several important patents, granted and pending. One of the most interesting developments in radio is the better and special tubes. Before this season is over there will be special tubes used for certain purposes such as Radio Frequency, Detector, Audio, and Output tubes. The Elkay will not become obsolete due to this fact, in as much as the only change necessary to accommodate these tubes will be to remove the Elkay fixed resistance now in the set and replace it with the latest type designed to accommodate that particular tube. The operation requires but 30 seconds time. It is a fact and is recognized by all engineers that a set is at its highest efficiency when it is just below the point of oscillation. The Elkay incorporates a variable primary patented by Lord, U.S.A. patent No. 1571900, which rotates automatically and keeps the set just below oscillation over the entire wave band of 200 to 550 meters. It cannot be made to squeal.

Donle Tru-Phonic system of amplification is used and assures perfect reproduction without loss of amplification.

The Elkay may be used as a single, double or triple dial control all in one. Cabinet is of solid antique mahogany and is beautifully finished.

RA9001. Complete as described.....$198.50

This set may be had cased in Baby Grand Console 430 as illustrated on Page 546, No. RA9002.

THE PERSUASIVE POWER OF COLOR

The difference in Selling Power between this illustration and the one on the preceding page is apparent at a glance. The use of color illustrations releases vast sums tied up in salesmen's samples, covers a greater field and increases sales.

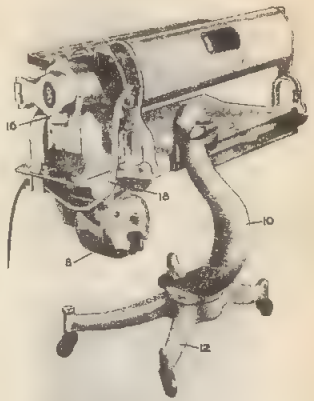
APEX ELECTRIC IRONER



All Electric—One Wall Socket Furnishes Heat and Power. Individual Switches for Motor and Heating Shoe, Consumes 10 Amperes on 110 Volts, No More than a Hand Iron and the Ironer will do the Work Three Times as Fast.

Heavy Cast Base Insures Solid Setting and Prevents Tipping. The Space Under Ironer Permits Ample Leg Room for Operator Space is Free from All Mechanism, Brackets, etc.

One of the Features of this Ironer is that the Roll Closes in on the Shoe Aligning Itself Against the Shoe Automatically and Maintains the Correct Pressure Instead of the Shoe Bearing Against a Rigid, Non-Adjustable Roll. The Ironing Roll is Made of Cold Drawn Steel Electrically Welded, and Treated with a Rust-proof Black Enamel. The Roll is Heavily Padded and the Padding Consists of Four Thicknesses of ¼ Inch Knitted Cotton. Over this Padding is a Muslin Cover which is Hemmed and Tied Down at Both Ends. The Heavy Padding Absorbs Moisture and Dries and Irons the Clothes More Quickly and Brings Out the Patterns Most Beautifully.

The Full Floating Open End Receives the Greatest Portion of Heat as this is the End Where Most of the Work is Done. The Folding Feature Makes it Convenient to Place Ironer in Closet or an Out of the Way Corner. Ironer Open Occupies a Floor Space 18 x 54 Inches; Folded Occupies Only an 18 Inch Square of Floor.

Has Swinging Clothes Rack and Extension End Tray. Shoe Release Allows Room for Cleaning Shoe or Recovering Roll. Roll Affords 150 Sq. In. of Ironing Surface and Maintains a Speed of 11 Feet Per Minute. Amount of Stretch Cut to One Quarter.

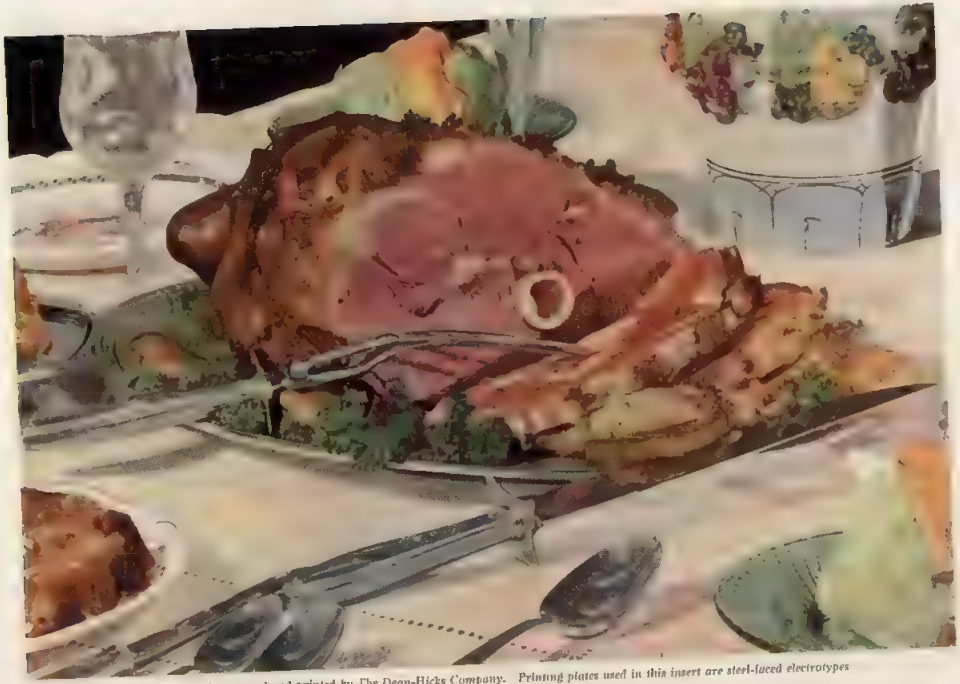
COLOR PROCESS PLATES BY THE DIRECT METHOD

Absolute accuracy of perspective, of depth, and of detail are retained in the advertising illustrations shown on this and the three following pages. These pictures give much the same sensation you used to get in looking at stereoscopic pictures through a double lens, that is, you see not only the two dimensions of a flat picture, but you experience the feeling of the third dimension—depth.

The presence of this depth of picture is obtained by making color negatives of settings exactly as you see them. The process is entirely photographic. The camera, by the use of filters, records onto separate glass plates the color values of each of the primary colors of the original groupings. These photographic negatives serve in place of the usual oil painting or wash drawing, heretofore used in making four-color plates.

This insert of four pages, designed, photographed, engraved and printed by
The Dean-Hicks Company of Grand Rapids, Michigan.



Photographed, engraved and printed by The Dean-Hicks Company. Printing plates used in this insert are steel-faced electrotypes furnished by the Grand Rapids Electrotype Company.

Hibbard FISH SPEARS

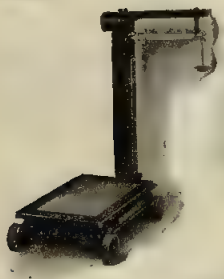
ONE DOZEN IN A BOX

PORTABLE PLATFORM SCALES

FAIRBANKS



The design and construction of the Fairbanks Portable Platform Scale embodies every feature called for in the specifications and requirements of all government regulations referring to weights and measures.

The beam used on this scale is of heavy polished brass with clear-cut graduations, and large plain figures. In form, it is of the well-known Fairbanks straight line, arrow-tip pattern.

The poise is of the center indicating type, having a prominent indicator at the lower center of the opening which points directly at the well-defined graduations on the beam. The opening in the poise has beveled sides so that no shadows are cast upon the graduations. The counterpoise and weights are "Parkerized" to prevent rust.

All platform bearings are of special hardened steel, finely tempered and arranged to be easily renewed. The bearing pivots are similarly formed from specially treated steel, combining a knife-edge of diamond-like hardness with a body of tough fibrous steel that gives the entire pivot the great strength required for continued accuracy and durability. The levers themselves, the frame, in fact, every piece of metal used, is selected and treated with similar care.

The painting and ornamenting of these scales is given the greatest care to produce a handsome, lasting finish that in every way conforms to the high quality of the other features. The iron work is given substantial coats of black paint, ornamented with bronze and well varnished. All wood work is given a thorough filling coat, several covering coats of blue, striped in bronze and well varnished. The wood platform panel is painted gray.

No.	Capacity Pounds	Beam Graduated	Size of Platform Inches	Each
1128	500	50 lbs. x ¼ lbs.	16x25	$33.00
1124	1000	100 lbs. x ½ lbs.	18x27	43.00

Note: In the platform sizes above, the first figure is the dimension parallel with the beam.

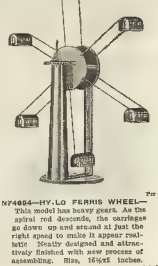
N74382—STUTZ RACER—Mechanical vehicle. Fully sculpted with bumper, head lights, motometer, gas tank and Spooner bumpers. Size, 12x5½x3 inches. Packed one in a carton..... 9.00

Hy-Lo



Per doz.

N74894—HY-LO FERRIS WHEEL—This model has heavy gears. As the spiral rod descends, the carriages go down up and around at just the right speed to make it appear realistic. Neatly designed and attractively finished with new process of assembling. Size, 16½x8 inches. Packed one in a box 14.40

Nifty Bus

Per doz.

N74007—MECHANICAL NIFTY BUS—Copied from the ordinarily used stage bus automobiles. Painted in attractive colors and has a specially adapted mechanism so that when the bus is in operation it runs along for a short distance and then stops automatically. The conductor pulls a string that rings a bell and then it again starts. The same performance is repeated several times with each winding. Size, 10x3 inches. Packed each in a box 16.00

Main Street Trolley

Per doz.

N74008—MAIN STREET TROLLEY—This is one of the most startling achievements in mechanical toys. The trolley car runs along, stops, and the side doors open. Then the "On Ahead" bell signal sounds. The doors close, and the car starts off again. Lithographed in bright colors. Length, 5 inches. Height, 3¾ inches 18.00

Airplanes

Per doz.

N74376—AIRPLANE—Well constructed and lithographed airplane, with a movable propeller. Size, 8x7x2¾ inches. Packed one in a carton..... 4.80

Per doz.

N74371—AIRPLANE—Adjustable rudder and movable propeller. Size, 12¾x12¾x3 inches. Packed one in a carton 8.00

Twin Flyer

Per doz.

N74404—TWIN-FLIERS—Two giant Zeppelins suspended from revolving mast awaiting the pull of the cord to start them in their circular chase. Mixed metal construction. All parts highly lithographed in bright colors. Size, 14x12 inches. Packed one in a carton 16.00

E-Z-Go-Round

Per doz.

N74488—E-Z-GO-ROUND—With six brightly colored riders, ready for the pull of the cord to set them in circular motion. Metal base and metal canopy lithographed in carnival colors. Topped with flag and stars. Size 8½x7 inches. Packed one in a carton 16.00

PORTABLE LAMP CLUSTERS

BENJAMIN

Wireless—Non-Adjustable

Designed for use in making floor and table lamps, converting oil and gas lamps and making over pottery, wooden and wickerware vases. Has a close grouping of sockets which makes it suitable for narrow shades. Each socket has an individual controlling switch working independent of the other. The electrical connections to both sockets are made by bringing the two wires through and fastening under two binding posts. Roman Gold finish. Complete with cluster body, stem with casing and ¼ inch coupling.

No. 842 Lights, 2; approximate length from shade support to bottom of coupling, 7½ inches. Unit package quantity, 1; standard package quantity, 5. Weight of standard package, 3½ lbs.....Each, **$1.60**

Wireless—Adjustable
